INSTRUCTIONS TO THE STUDENTS

- Each slide will be shown for 3 minutes.
- After 3 minutes, the slide will automatically change.
- Please read the question carefully and answer to the point.
- Each slide carries 5 marks.
- Revision for 3 minutes after 5^{th} slide
- **DO NOT** attempt to copy !

1. Describe the pathology seen in the slide, give DD for the same

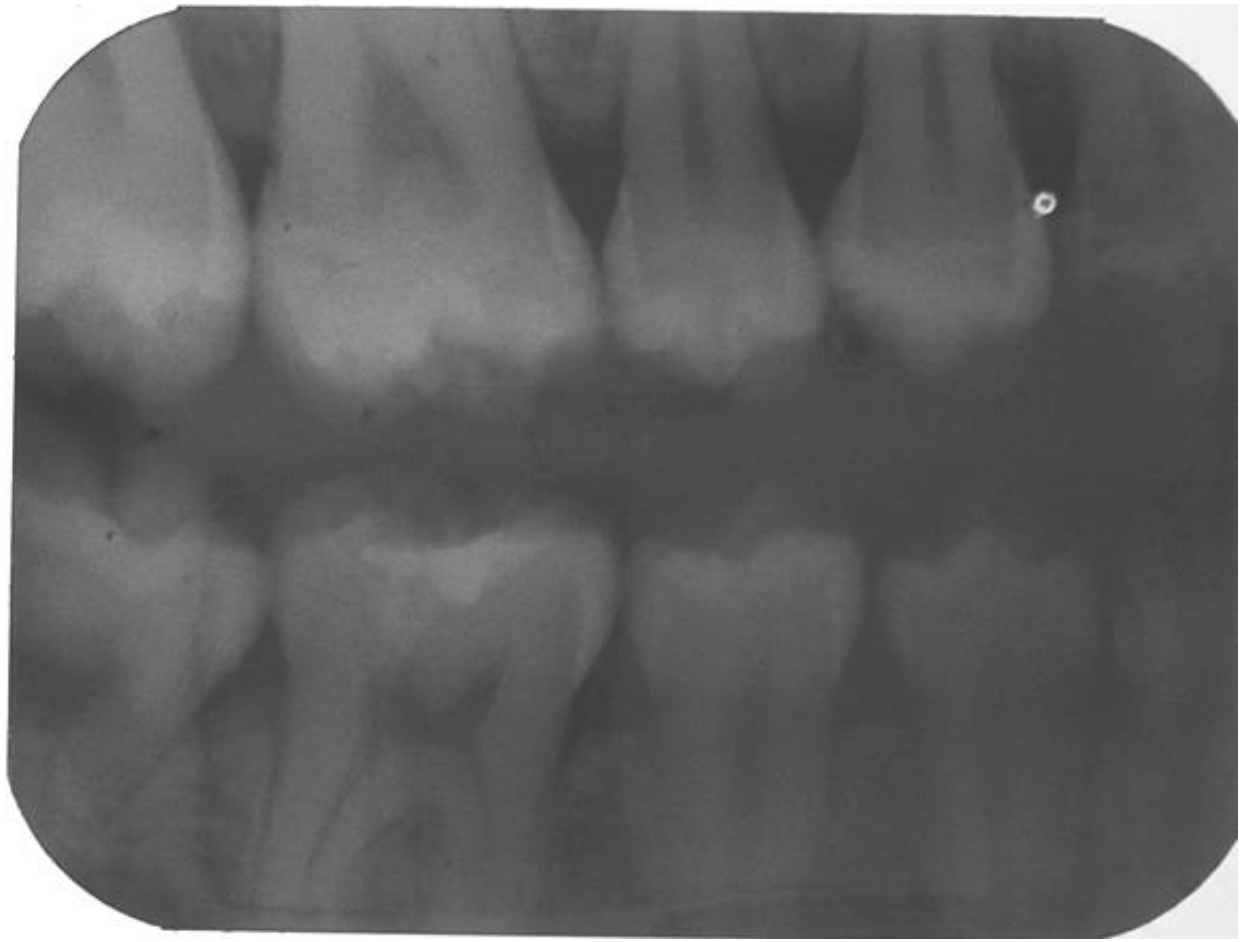

2. Describe the pathology seen in the slide, give D.D for the same

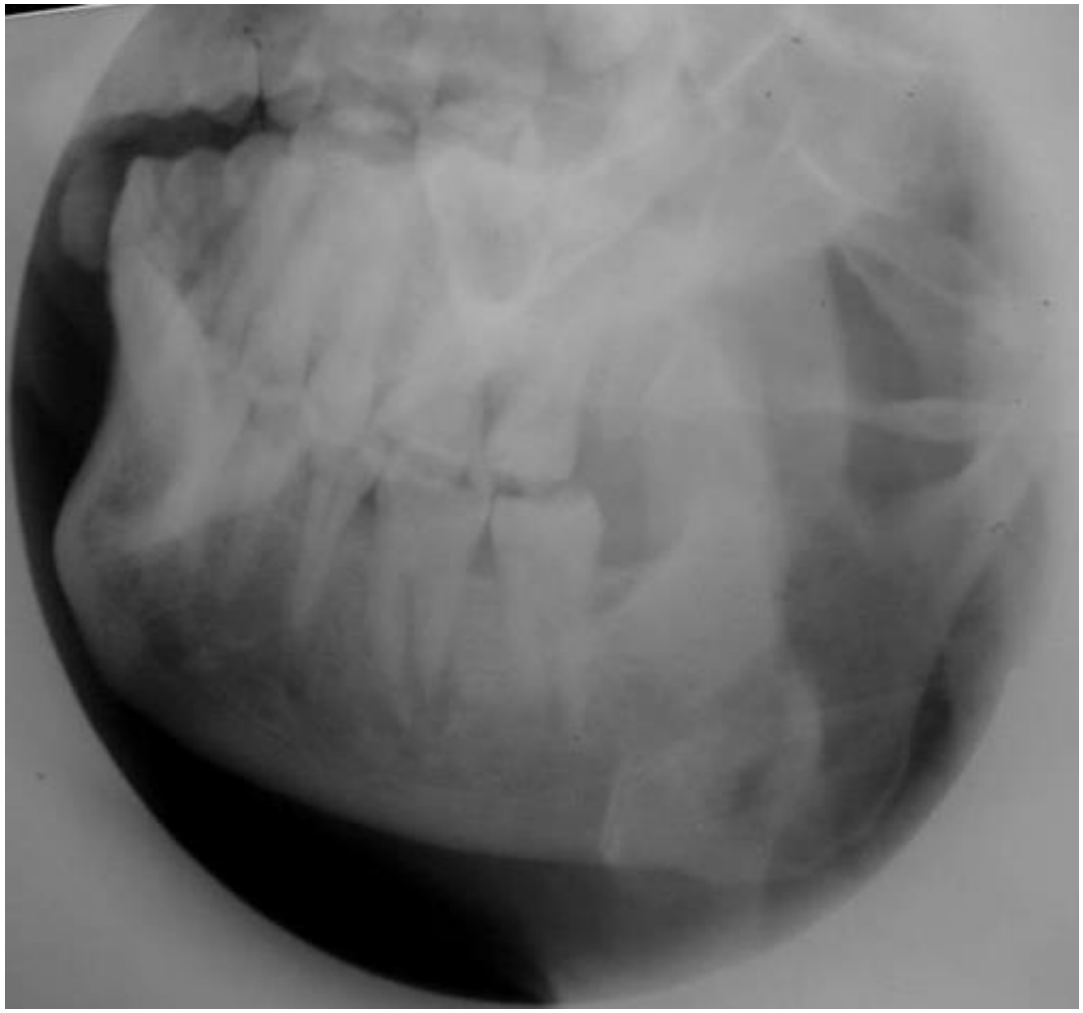

3. Identify the device seen, give its content and function

4. Identify the view seen in the slide, give indications for the same

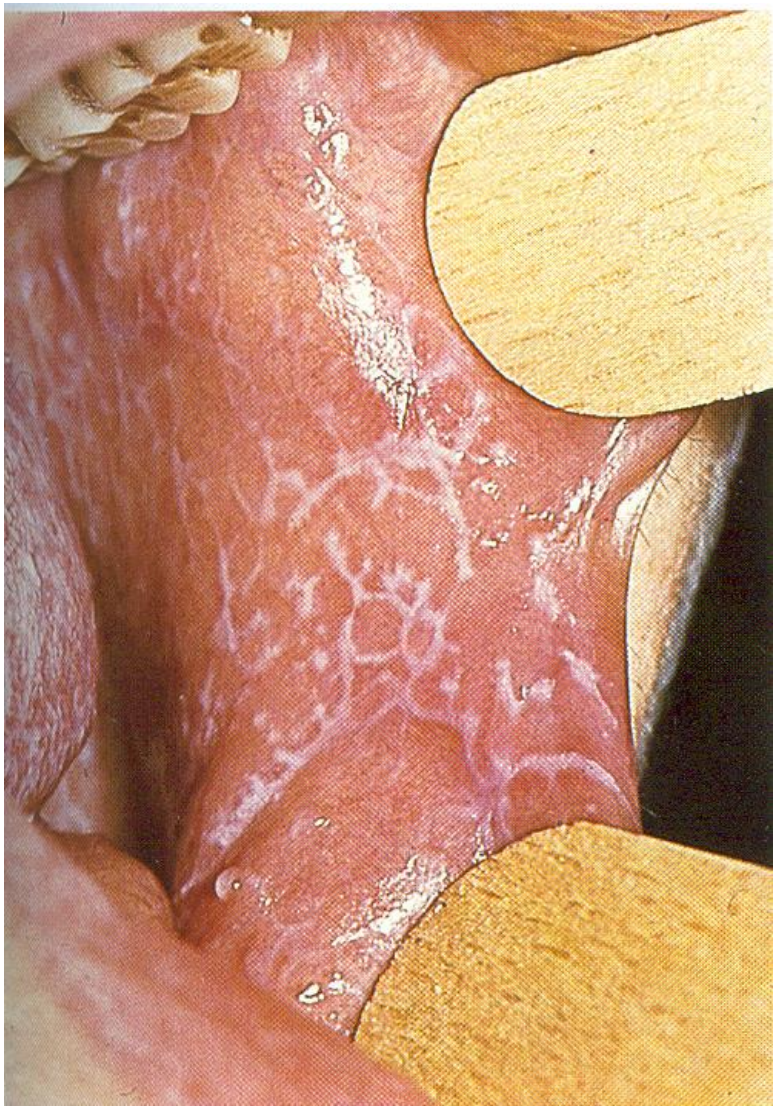

5. Identify the view, give indications for the same

6. Identify the lesion seen in the slide, describe management for the same

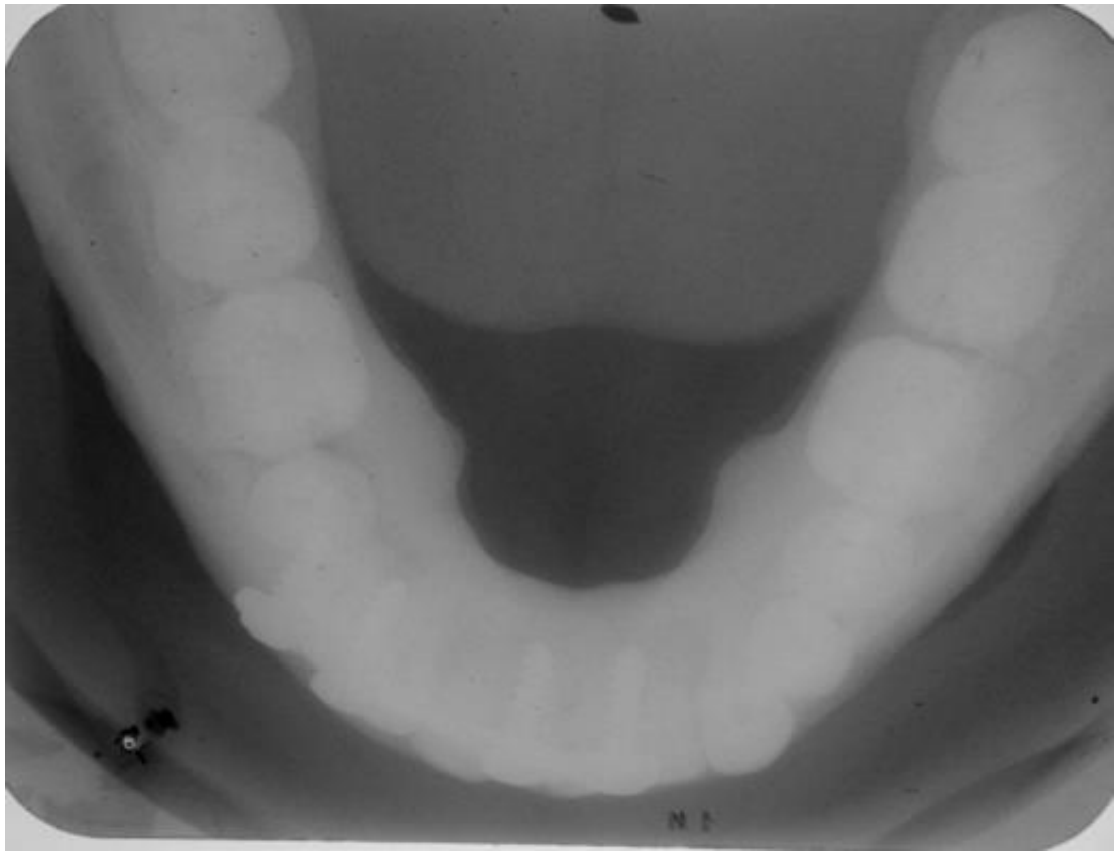

7. Describe the pathology seen in the slide, give D.D for the same

8. Identify the device seen, describe its working

9. Identify the view seen in the slide, give indications for the same

10. Identify the view, give indications for the same

Grading parameters for each exercise as follows:

1. All listed criteria fulfilled: A
2. One of the listed criteria not fulfilled: B
3. Two or more than two of the listed criteria not fulfilled: C

CLASS II AMALGAM PREPARATION

CRITERIA	GRADE A	GRADE B	GRADE C
Class II amalgam cavity preparation	All features incorporated	Partial Features incorporated	No features incorporated
Proper Application of Matrix and Retainer for class II cavity	Done with wedge application	Done without wedge application	Neither bands nor wedges applied
Base Application for Class II cavity	Complete (Application done on pulpal floor and axial wall)	Partial (Application done only on pulpal floor)	Incomplete (Neither applied on pulpal floor nor on axial wall)
Amalgam Restoration	Proper carving completed following occlusal anatomy with no overhanging margins	Improper carving with overhanging margins	Unrestored occlusal anatomy or fractured margins

INSTRUCTIONS

1. Discipline and punctuality is expected throughout the clinical postings.
2. Each student should wear a clean white apron. Shirt sleeves should be folded properly above the elbow.
3. Long hair should be tied at the back and the head cap should be worn.
4. Long nails, nail polish and mehendi are strictly prohibited.
5. Use of facemask, protective eyewear and head cap is mandatory.
6. Remove all jewellery including wristwatches and rings before wearing gloves.
7. Each student must possess two sets of instruments during their practical posting and examinations. Lending or borrowing of instruments will never be allowed.
8. Each student should possess adequate knowledge about instruments and all equipments and working of the dental chair before handling them. No procedure should be carried out without taking permission and guidance from the staff.
9. Report any damage/breakage of equipment immediately to the concerned staff member.
10. Maintain cleanliness during work and avoid wastage of dental materials. Remember that each patient deserves skillfully performed procedures.
11. Fundamentals of operative dentistry must be well understood and reviewed periodically by the student.
12. Conservation of tooth structure, clean-cut tooth preparation, isolation of operating field, proper pulp protection and good aesthetics are important aspects of clinical procedures carried out in the department.
13. Students should bring their record book on each day of their posting and record book should be regularly updated and duly signed by the instructor.
14. Approval of each procedure performed by the student from the instructor and immediate entry in the record book is imperative.
15. Marks will be credited for this record book at the University Examination.

RULES TO BE FOLLOWED IN THE CLINICS

1. Disinfect your working area by using spray-wipe-spray technique.
2. Pleasantly greet the patient in the reception area by name and request that he or she follows you to the treatment area.
3. After the patient is seated in the chair, bring the chair into position, drape the patient, turn on the operating light.
4. Scrub your hands with soap and thoroughly wash them, dry them and put on the gloves. Discard the gloves after single use. Replace torn or damaged gloves immediately.
5. Clinical examination of every patient is mandatory. Record your findings in the patient's record paper and also in your journal. Get it approved by your instructor.
6. Clearly communicate to the patient about his/her dental diagnosis and the procedure(s) required. Explain the treatment plan to the patient; take an informed consent before commencement of the operative procedure.
7. Get each and every step of the operative procedure approved by your instructor.
8. After the completion of operative procedure, give proper post operative instructions and schedule the next appointment for him/her.
9. Check the patient's face for smudges or debris, gently remove them with moist cotton / tissue
10. Bring the chair to the (rest) position before asking the patient to leave the chair.
11. Used instruments should be cleaned and rinsed in tap water before placing them in the ultrasonic cleaner.
12. Students are expected to dry the instruments retrieved from ultrasonic cleaner, neatly pack them in their sterilization pouches These pouches should be handed over to the staff nurse for sterilization.

LIST OF INSTRUMENTS

Diagnostic Instruments: (2 sets each)

1) Mouth mirror with handle
2) Straight probe
3) Williams graduated probe
4) Double ended explorer
5) Tweezer

Instruments for tooth preparation:

A) Hand Instruments: (2 sets each)

1) Single ended straight enamel chisel (2mm)
2) Double ended unibevelled enamel Hatchet (2mm)
3) Double ended Gingival Marginal Trimmer 77/78 and 79/80
4) Double ended spoon excavator -Small & Medium size

B) Rotary Instruments:

Sr. No.	Instruments	
1.	Contra - angled handpiece for Micromotor (Slow speed)	
2.	Contra - angled handpiece for Airotor (High speed)	
3.	Diamond points - (FG & Latch type) (2 sets each)	Size -10/12 Shape - Round, Straight, Inverted Cone, Tapered Fissure (short and long), Pear shaped.
4.	Carbide burs (latch type)	Round (Small and Medium size) ;

Plastic Filling Instruments: (2 sets each)

1) Cement Spatula - Short & stiff blade
   - Long & flexible blade
2) Agate Spatula.
3) Cement Carrier - Double ended instrument with one end rounded
4) Double ended round Amalgam Condenser (small)
5) Double ended parallelogram Amalgam Condenser 155/153
6) Amalgam Carrier No. 5
7) Double ended ball Burnisher
8) Amalgam carvers
   - Wards
   - Frahms
   - Hollenbeck
9) Composite filling instruments (plastic)

Finishing and Polishing instruments:

1) Hand
   1. Finishing Strips - Fine, Medium and Coarse.
2) Rotary
   1. Finishing burs or points for silver Amalgam restoration (round and flame shape).
   2. Polishing brush and rubber cup.
   3. Composite finishing and polishing kit.
   4. Impregnated finishing disks - Assorted.

SUPPLEMENTRY INSTRUMENTS

1. Stainless steel tray with lid - 8" 3"
2. Enamel tray - 18" 18"
3. Mackintosh sheet - 18" 18"
4. Rubber bowl - Small and Large
5. Plaster spatula - Straight
6. Plaster knife
7. Wax spatula & knife
8. Glass slab - Thick
9. Chip syringe with bulb
10. Dappen dish - 2 Different Colours
11. Cotton Holder - Stainless steel
12. Waste receiver - Stainless steel
13. Matrix band retainer - Ivory No.1, Ivory No.8
14. Matrix bands - Ivory No.1 (Assorted Pk.)
(Premolar and Molar bands 0.038mm & 0.05mm)
Ivory No.8 (Assorted Pk.)
(Premolar and Molar bands 0.038mm & 0.05mm)
15. Celluloid/Mylar strips.
16. Wooden wedges - Assorted sizes
(Blades to shape the wedges)
17. Mortar & pestle - Ground glass
18. Curved stainless steel surgical scissors. - Small
19. 0.5 mm pencil marker
20. Ruler (6")
21. Hand gloves size. – As per individual size.
22. Face mask

CASE RECORDS

Diagnosis & Treatment planning in Conservative Dentistry

Name of the patient: Rajkumar Gautam

Age: 31 yrs

Address: Pune

Tel. No. 7841949832

Occupation: Service.

Registration No. 4223

Date: 23/09/22.

Gender: Male.

Emergency Contact: 9841949832

DENTAL RECORD

Chief Complaint: Patient complains of pain after food lodgement in upper right Back region of Jaw since 2-3 months.

History of present illness: Patient was apparently asymptomatic 3 months back until he experienced pain after food lodgement in maxillary left posterior region of Jaw. Pain is sharp, shooting & localized in nature. It is lingering & lasting for about 5 to 10minutes pain aggravates on pressure on mastication & relieves on its own. Patient has no history of nocturnal pain, swelling & pus discharge.

Past Dental Experience:

Tooth coloured Restoration $\frac{\bar{C}}{6|}$ (4 yrs Ago)

Subjective symptoms:

Tooth / Region

Pain:	Present ✓		Absent
Location:	Localized ✓	Diffused	Referred
Duration:	Seconds	Minutes ✓	Hours
Quality:	Sharp ✓	Dull	Throbbing
Onset:	Stimulated ✓	Spontaneous	
Increased by:	Cold	Heat	Pressure ✓
	Postural Change	Sweet	Sour
Relieved by:	Cold	Heat	Medication ✓

Medical History:

A) Record of any present illness: NO Relevant History

i) Cardiac disease

- Anginal / Coronary
- Pacemaker
- Congenital heart disease
- Rheumatic fever

ii) Abnormal bleeding

- Blood dyscrasias

iii) High blood pressure

occlusal caries $\bar{c}$ /4
Occlusal fault $\bar{c}$ /6

(14)

CLINICAL EXAMINATION OF AMALGAM RESTORATIONS:

- Amalgam blues
- Proximal overhangs
- Marginal ditching
- Voids
- Fracture lines
- Improper anatomic contours
- Marginal ridge incompatibility
- Improper proximal contacts
- Recurrent caries
- Improper occlusal contacts

} No Relevant Finding.

CLINICAL EXAMINATION OF CAST RESTORATIONS NRF

⇨ Defective, Proximal overhang, Improper contours, Fractured tooth/Restoration, Secondary caries.

CLINICAL EXAMINATION OF TOOTH COLORED RESTORATION.

1) Improper contour
2) Proximal contact
3) Overhanging proximal margin
4) Recurrent caries
5) Marginal staining.
6) Fracture

} NRF

EXAMINATION OF NON-CARIOUS LESIONS

ATTRITION

ABRASION

EROSION

ABFRACTION

} No Relevant Finding

EXAMINATION OF AREA OF CHIEF COMPLAINT:

a. Tenderness on palpation Positive

b. Pain on percussion Positive

c. Mobility Absent

d. Furcation involvement Absent

e. Pulp vitality tests

Thermal test: Heat Cold ✓

i. No response
ii. Moderate transient response
iii. Painful response which subsides quickly after removal of stimulus
iv. Painful response that lingers after removal of stimulus

f. Electric pulp test

	Control tooth	Test tooth
	Response at number	Response at number

Caries Diagnosis:

1. Clinical Examination for caries:
   a) Visual changes - Surface Texture - soft consistency
   - Colour Blackish discolouration
2. Tactile sensation
3. Radiographs Radiolucency involving enamel, dentin & approaching pulp. ROPA-61
4. Transillumination.

Categorization of Adults According to Caries Risk indicators:

Caries Risk Category

Low: - No carious lesions in last 3 years.

Adequately restored surfaces

Good oral hygiene

Regular dental Visits

Fluoride dentifrice use

Medium: -

Presence of two of the following indicators:

Current orthodontic treatment or removable appliance or several exposed root surface or poor oral hygiene or frequent fermentable carbohydrate intake or inadequate exposure to topical Fluoride.

High:- Presence of one of the following indicators:

Any carious lesion in previous 2 years or inadequate salivary flow or initial enamel interproximal radiolucencies or presence of >2 of the risk indicators shown in the medium risk category.

Provisional Diagnosis:

Chronic Irreversible Pulpitis c 6/

→ a) Region - maxillary right post. Region
b) Teeth completely seen - 765/ Teeth partially seen are 14. Most pathologic tooth is 16.
Crown - Diffused radiolucency involving enamel, dentin reaching pulp.
2 intact Roots with patent Root canal
PDL space is widen with discontinuous lamina dura. No Periapical Radiolucency seen. Intact interdental crest seen.

Investigations and interpretations :

i) Radiographs: Intraoral periapical ✓

Bitewing

O.P.G.

Any other

ii) Blood tests:

iii) Any other:

Final Diagnosis:

Pulpal — Reversible / Irreversible ✓

Periapical Pathology:

1) Acute apical periodontitis
2) Chronic apical periodontitis
3) Periapical granuloma
4) Periapical cyst
5) Acute dentoalveolar abscess

Radiographically - loss of lamina dura & widening of PDL space.

Prognosis: fair.

Treatment Plan:

i) Urgent phase

Access opening c 6/

ii) Control phase

oral prophylaxis.

iii) Re-evaluation phase

iv) Definitive phase

1) cleaning & shaping c 6/

2) obturation c 6/

3) post Endodontic Treatment c 6/

4) Prosthesis c 6/

v) Maintenance phase

Recall after 6-8 months.

Introduction

The ideal property required for tooth movement is the production of line, optimal continious force. Hence the most important requirement of an orthodontics were relate to mechanics of tooth movement.

For the given appliance, the design to be succesfull, the mechanical properties of wire which will be considered are.

Mobility
Ductility
Malleability
Stiffness
strength
Corrosion resistance
Ability to be welded & soldered.
Biocompatible.

- Classification of orthodontic wire.

1. Noble metal
2. Stainless steel wire
3. Titanium alloys
4. Non-metal alloys.

1] Noble Metal.

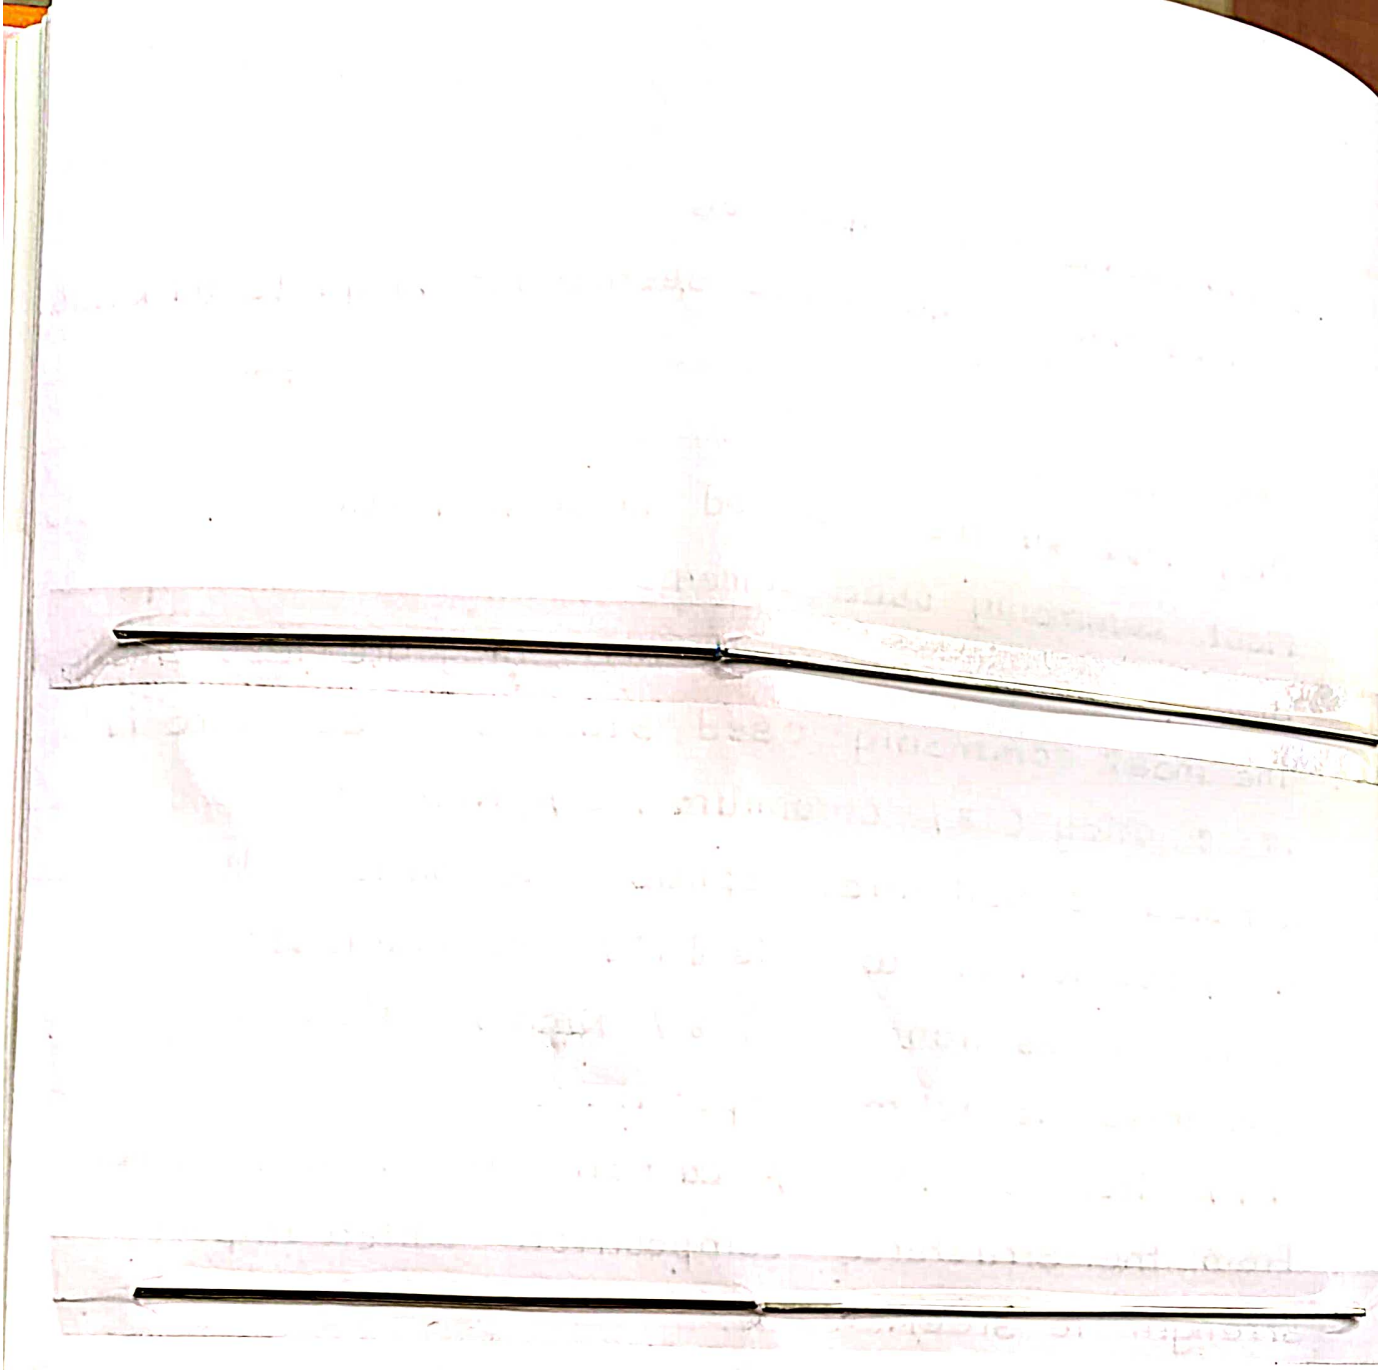

- Example : Silver, Platinum, Gold
- These wires are very expensive though they are quite elastic.

Disadvantage : I. Expensive.
II. They have large cross section for adequate thickness

2. Stainless steel wire.
- They have all the required ideal properties.
- Most commonly used wires.
- However in comparison to NiTi, they are less elastic.
- The most commonly used Stainless steel wire is 18 : 8 alloy (18% chromium, 8 % Nickel)
- A typical orthodontic appliance is made in 18 : 8 wire.
- A composition of wire is 1] 18 % chromium - for corrosion resistance 2] 8 % Nickel - make it austentic at room temperature.
- 74 % Iron & 40.50 % Carbon, the iron & carbon from the structured composition which imparts strength to steel.
- Increase in carbon content would increase hardness but makes structures more brittle.

3. Titanium Alloys.
- These are highly elastic wires.
- They are used in appliances for treatment purposes.
- Examples : NiTi and Tm A.
TmA is not solderable nor weldable

4. Non - Metal Alloys.
- Wire has aesthetic appearance. Stable in oral environment. eg. optiflex wire.

Exercise 01.

Aim : To straighten a 6 inches piece of 19 gauge HRSS (Hand round stainless steel) wire in all planes.

The Tests for straightend wire are

- It should roll freely on glass slab.
- There should be no gap between the wire and glass slab.

Exercise 02.

- Aim :

To straighten a 6 inches piece of 21 gauge HRSS (Hand round Stainless steel) wire in all planes.

- The tests for straightened wire are.

i. It should roll freely on glass slab.

ii. There should be no gap between the wire & the glass slab.

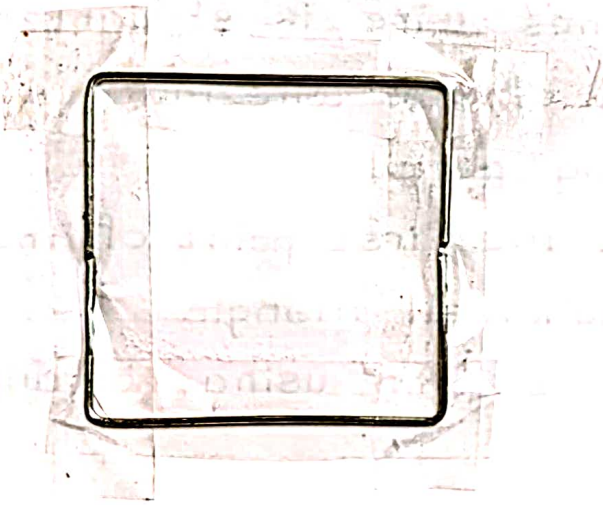

Exercise 03.

Aim : To prepare an equilateral triangle of each side 5 cm of 19 gauge HRSS wire.

Procedure :

I. An equilateral triangle of sides 2 inches each is prepared using a 19 gauge HRSS wire.
II. Firstly 7 inches wire is straightened.
III. From one end of this wire mark 1 inch length with glass marking pencil.
IV. This will be the first point of the first bend to form an equilateral triangle.
V. An 90° bend is given using rectangular beak at the piece.
VI. Then the piece is held a little away from the formed angle more acute.
VII. This is repeated till the angle becomes 60°. Check the parts for equality at the plane of the triangle.
VIII. Mark the point at 2 inches length & repeat same.
IX. Keep in mind the plane of all sides of the triangle till the end meets the starting end.
X. Check the formed triangle for sides angles & planes on the graph paper with a triangle of 2 inches length drawn on it & check the plane on glass slab.

Exercise 04.

Aim : To prepare a square of each side 4 cm using a 19 gauge HRSS wire.

Procedure :

- The square is made using a 19 gauge HRSS wire.
- A wire of 16 cm length is straightened.
- 4 cm is marked from one end of wire with a glass marking pencil.
- At the point, the wire is bent to form square.
- A 90° bend is given using the rectangular end of the plier.
- The two parts of wire are checked for plane.
- Next measurements are marked & procedure is repeated. till a square is formed keeping in mind that the plane of all 4 sides of square till the end meets.
- The excess is cut.
- The dimensions are checked with a graph paper.

Exercise 05.

Aim : To prepare a Rectangle of sides 5 x 3 cm by using a 19 gauge HRSS wire.

Procedure :

- The rectangle of sides 5 x 3 cm is prepared by using 19 gauge HRSS wire.
- Firstly 2.5 cm wire is marked & bent in 90° angle.
- Then mark 3 cm & the procedure is repeated i.e bending in 90°.
- Now mark 5 cm and bend. After each bend check for the plane on glass slab.
- Now bend on 3 cm marking.
- Lastly 2.5 cm should be marked and bent till it meet another end.
- Cut excess of wire.
- Check the dimensions on rectangle drawn on graph paper.

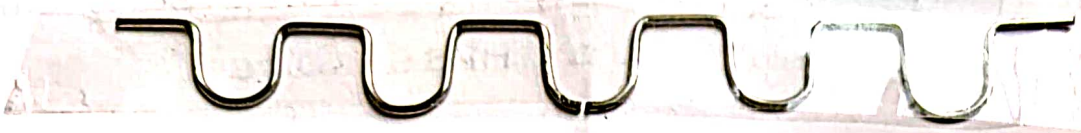

Exercise 06.

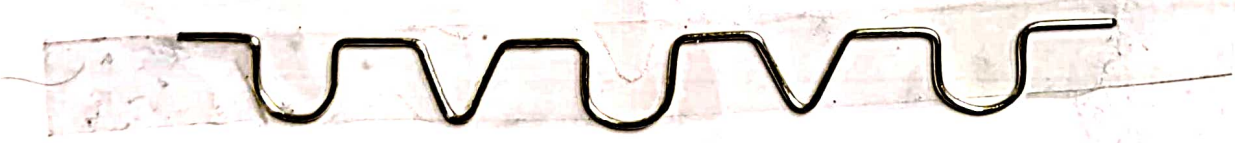

Aim : To prepare a circle with diameter 5 cm from 19 gauge wire HRSS wire.

Procedure :

- The circle is made using 19 gauge wire
- 6-7 inches wire piece is taken and wire is curved using pulp of finger.
- Step by step. the free end is curved by a piler.
- An accurate diameter of circle is obtained
- Care is taken during formation of circle that there are no sharp bends or kinks.
- The circle is completed by approaching the two ends with each other.
- The dimensions are checked on graph paper as well as its adaptation on glass slab.

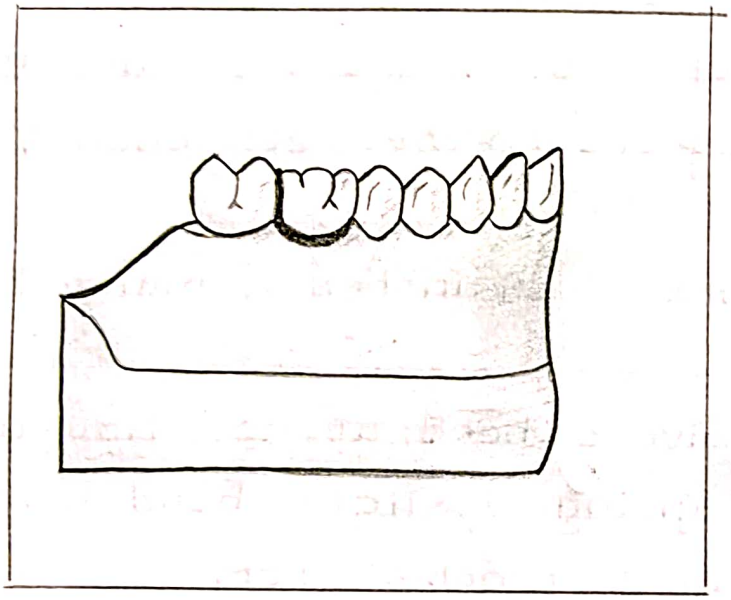

Exercise 07.

Aim : To prepare an U series, V series and a UV series from a 19 gauge wire

Procedure :

- Prepare a UV series of U of height 1 cm and V of height 1 cm leaving a gap between each V and each U of 1 cm.
- Take a 19 gauge wire of 9 inches & make it straight.
- Now mark at 1cm & give a bend at 90° Now at approx 0.7 mm start giving a slight bend using plier till the height of U reached 1 cm.
- Now again repeat this procedure to make 5 'U' with 1 cm gap in between each 'U'
- For V series, mark at 1 cm. and give a bend and V should be of 1 cm height, so give bend accordingly.
- In this way 5 V's are prepared with 1 cm gap in between each V.
- check the plane on glass slab.
- For UV series make U & V alternately and check the plane on glass slab.

Circumferential Clasp.

Exercise 08.

- Aim : To prepare a 'C' clasp from 19 gauge wire.
- Defination. : A 'C' clasp is a passive removable appliance which is used to provide retention to the appliance also called as circumferential clasp or a 3/4 th clasp.
- Requirement : It should be rigid.

II. It should give or have excellant retention without causing retention. irritation to gingival tissue.

III. It should not undergo distortion during mastication & insertion on removal of appliance.

IV. It should be easy to fabricate & should be replaceable.

- Procedure :

I. A 19 gauge wire bent following a cervical line / countour of tooth using universal plier.

II. The wire should be adapted into the distal embrassure of area & it should go untill it reaches the supplied aspect of contact point between two teeth.

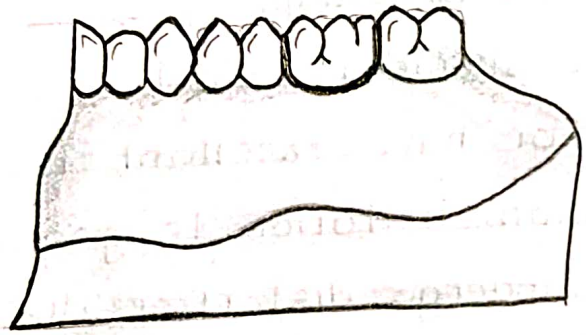

The first occlusal point between two teeth.

The first occlusal pt 'C' clasp should follow the occlusal part of interdental anatomy which in case of molars is in U shape.

V. This bend is given to adapt wire occlusally.

There should be a gap of 0.5 - 0.7 mm between Tag arm & cast.

Jackson's Clasp

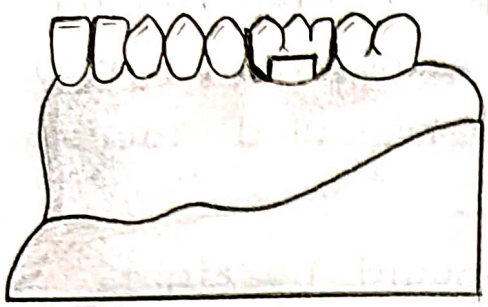

Exercise 09.

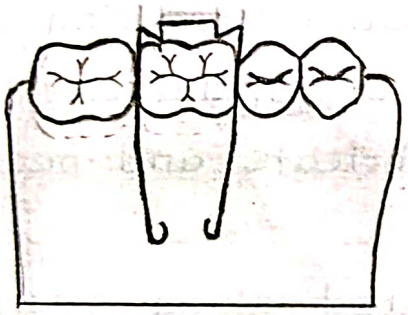

- Aim : To prepare a 'U' clasp from 19 gauge wire.
- Defination : This clasp engages the buccocervical undercut and also the mesial as well as distal proximal undercuts. It is called Jackson's clasp or 'U' clasp or full clasp.
- Requirement : I. It should be rigid.
  II. It should give excellent retention. without any irritation to gingival tissue.
  III. It should not undergo distortion during mastication & insertion on removal of appliance.
  IV. It should be easy to fabricate and be replacable.
- procedure :

1. A 19 gauge wire is adapted along bucco-lingual margin & both proximal undercuts then carried over occlusal embrassure to entire retentive arm on both sides of Molar.
2. M bend is given to adapt wire occlusally.
3. There should be a gap of 0.5 - 0.7 mm between the arm to cast. Bend it into loop, Just in turn 90° angle.

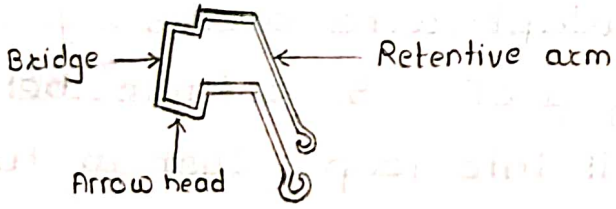

Adam's Clasp

a. Buccal view

b. occlusal view

Exercise 10.

- Aim : To prepare an 'Adam's clasp'
- It was first given by Dr. C.P. Adam It is also called as universal clasp. Liverpool clasp or Modified arrow head clasp.
- Procedure :

A 22 gauge wire is used to construct an Adam's clasp.

First measure 2/3 rd of Mesiodistal dimensions of teeth or buccal S/F and then their corresponding points are marked on the wire.

Bends are given on the point keeping the angle approx 60°

In this way bridge of clasp is prepared.

Arrowheads are prepared by giving outward & downward bent at this point. The million dollar bent at this point It is given by holding plier at one half of the arrowhead The two arrowheads should be mesiobuccal & distobuccal line angle.

The prepared arms of the arrowheads are then adjusted to coincide with them.

They are adapted interproximally by giving interproximal bend. Tag arms are made as in C-clasp.

Orthodontic Appliances.

These are divices used to apply force on a tooth/ group of teeth in predetermined direction to move a tooth to the desired direction.

- Classification.

They are divided into 3 groups.

Group A - 1. Mechanical 2. Functional.

Group B - 1. Active 2. Passive.

Group C - 1. Fixed 2. Removable.

A] 1. Mechanical Appliances :

These appliances evert direct pressure on teeth.

2. Functional Appliance. :

These appliances which evert, makes use of various functional forces to bring about tooth movement. Jaw position in desired position.

B] 1. Active Appliances :

These exert active force on teeth to bring about movements.

2. Passive Appliances :

These do not exert any force on tooth.

C] 1. Fixed Appliances.

These are fixed into the teeth/tooth for duration of an active treatment till the teeth are moved.

2. Removable Appliances.

These can be removed by the patient at will.

- Components of Removable Appliances.

I. Base Plate.

made by acrylic & serves following functions.

i. Holds the other components (Active & Passive).

ii. Helps in anchorage.

iii. In selected cases it is thickened & serves as a little platform or inclined plane.

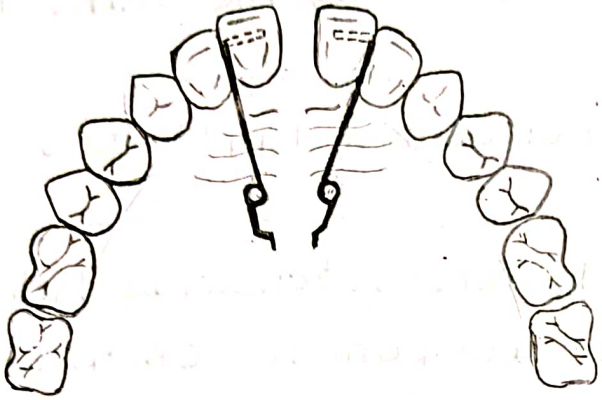

II. Active Component

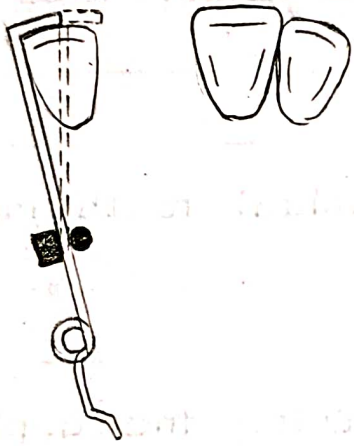

Used to bring about actual tooth movement.

III. Passive Component.

They are used for retaining the appliances in oral cavity. They are passive & do not exert any pressure on tooth.

Finger Spring

Activation of Finger Spring

Construction of Springs.

1. Finger Spring.

- Aim : To prepare finger spring or palatally approaching Canine retractor.
- Fabrication : 4 inches 23 gauge wire is first straightened. At the end the wire is bend on itself so as to make the end blunt. This will prevent injury to gingival tissue. This end of wire is then adapted interproximally the coil is prepared on the wire with the following criteria.

a] It should project helix & internal diameter should be four times diameter of wire.

b] The active arm coil should be parallel to occlusal plane.

c] The coil should be on opposite side of tooth movement.

d] It should have 1/4 th turn.

- Indication :

This canine retractor is used on Anterior as well as Posterior teeth to either mesialize or distalize tooth.

- Advantages :

I. It is located on parallel side, therefore more esthetic
II. It can be used for both Anterior or posterior teeth.
III. This retractor can either mesialize or distalize tooth.

- Disadvantages.

I. They are normally effective over short distance. as located on palatal side.

II. They tend to interfere with tongue movement.

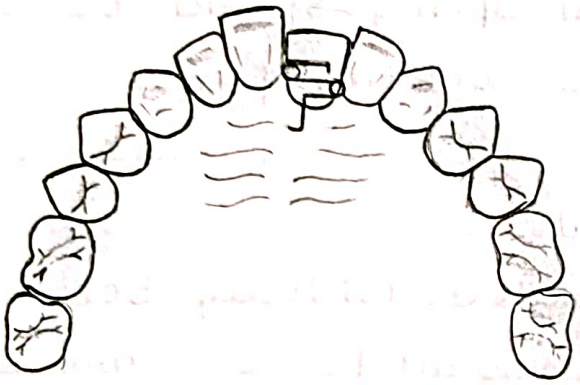

III. Thus the palatal spring should be boxed & hence it is time consuming.

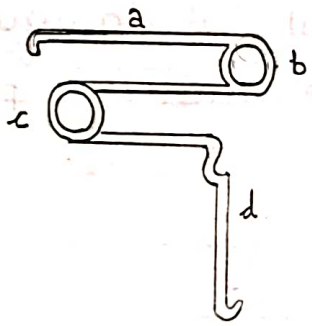

- Placement of Coil.

It should be situated midway between initial & final position. It should be 6-8 mm away from cervical margin.

After fabrication of coil, A downward vertical bend is given to all to make the coil parallel to occlusal plane.

Double Cantilivet Spring

Spring design in double cantilever spring

a : active arm emerges from tissue side.

b : First coil.

c : Second coil.

d : Retentive arm & tag.

Double Contiliver Spring (Z-Spring).

- Aim : To construct Z spring from 23 gauge wire or 0.6 mm HRSS wire.

- Fabrication.

1. Firstly a 4 inches piece of 23 gauge wire is straightened.
2. The end of wire is then bent on itself to make the wire blunt. (bent on crushed loop). The mesiodistal width of the concerned tooth is measured & then transferred on the wire.
3. At that point the first coil is made, Internal diameter should be 4 times the diameter of wire. An active arm should be above the coil. The second coil is then prepared as that mesiodistal width of tooth. All the specifications of previous coil should be maintained

- On the distal arm of second coil. 90° downward vertical bend is given to ensure that plane of spring is maintained parallel to occlusal plane.
- The spring should be adapted to height of cingulum of the tooth.
- The tag arms are fabricated to complete wire bending.
- Boxing is supposed to be done on modelling wax. The purpose of box is to protect spring.

- Indications.

I. To bring labial movement of one or more teeth. correction on mirror rotation.

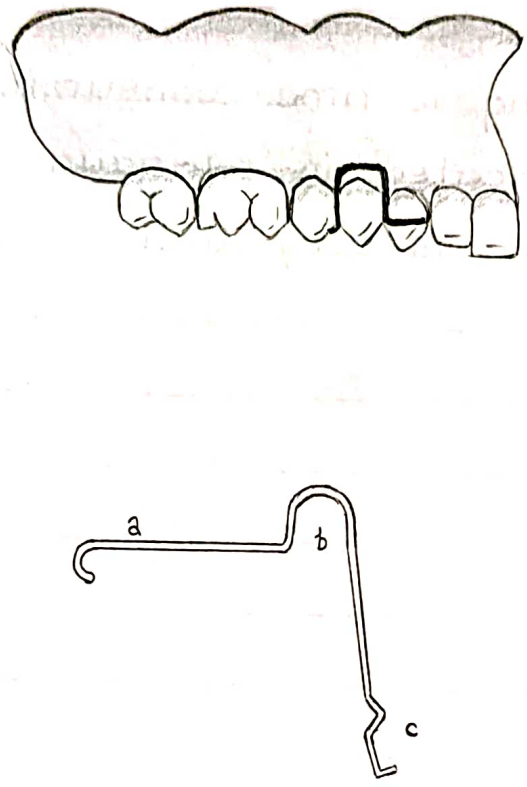

II. Correction of Anterior cross-bite. (by labial movement of concerned tooth).

- Disadvantages.

I. Palatal spring is time consuming.

II. As it is fabricated in 23 gauge wire, chances of distortion is very high.

U loop Canine Retractor

a. Active arm

b. U loop

c. Retentive tag.

Construction of Canine Retractor.

- U loop canine retractor.
- Aim : To construct a U loop canine retractor.
- Procedure :

i. It is made of 0.6 mm or 0.7 mm wire.

ii. It consist of U loop, an active arm & a retentive arm that is distal

iii. The base of U loop should be 2-3 mm below the cervical margin.

iv. The mesial arm of U loop is bent at right angles & adapted around the canine below the mesial contact point.

v. Mechanically it is best effective & is used when minimal retraction of 1-2 mm is required.

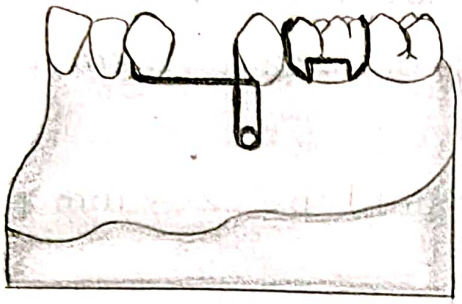

vi. It is activated by closing the loops by 1-2 mm or the cutting the free end of the active arm by 2 mm & readapting it.

- Advantages :

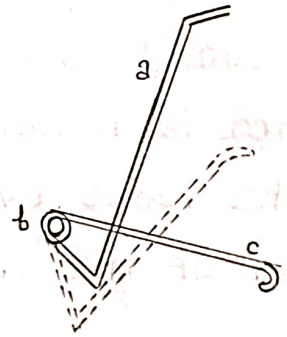

I. They are easy to fabricate.

II. They have less bulk.

Helical Canine Retractor

Lateral view.

a : Active arm

b : Helix.

c : Retentive arm.

Helical Canine Retractor.

- Aim : Prepare a canine retractor - Helical type.

- Procedure :

- It is fabricated from 23 gauge HRSS wire.
- 4 inch piece of wire is first taken & a coil is then placed with round beak of plier in such a way that there is no gap between the coil.
- Active arm should be adapted over buccal surface of canine.
- A coil should be placed 3-4 mm below the cervical margin of 2nd premolar.
- Tag arm is placed between first & second premolar. Then the active arm is bent at right angles to mesial cervical 1/3 rd of second premolar.
The arm should be parallel to occlusal surface.
The tag arm is bent & adapted on active arm.

- Indications.

The helical type of canine retractor is best suited for retracton of canine in 1st premolar extraction cases. When canine are also well aligned in the dental arch.

- Advantages :

i. Due to presence of coil, it permits gentle forces. Hence requires gentle less activation.

ii. It has wide range of action.

iii. Tag arm is mesial to 2nd premolar, which prevents loss of anchorage.

- Disadvantages

i. It is made up of thinner gauge wire & is likely to distort.

ii. It is difficult to construct.

- Activation.

It is activated by opening the coil by cutting free end of active arm & readapting it.

Box Type Canine Retractor.

- Aim. : To prepare box type canine retractor with 22 gauge wire.

Canine retractor is an active component of removable appliance.

- Classification of canine retractor.

1. Depending upon Position.
   a. Buccal - bucally placed.
   b. Palatal - palatally placed.

2. Based on presence of helix or loop.
   a. Canine retractor with helix.
   b. Canine retractor with loop.

3. Based on mode of action.
   a. Push type.
   b. Pull type.

- Box type : It is buccally placed pull type, without coil type of canine retractor which is made from 22 gauge or 0.7 mm wire HRSS wire.

- Procedure :
- A 4 inch piece of wire is straightened.
- A loop is prepared & adapted to buccal surface & 2nd Premolar

- The loop should extend 2-3 mm below cervical margin (0.5 mm away from gingival seat).
- Both the arms of 'U' shaped box should be parallel to each other.
- A right angled bend is given at junction of cervical and mesial 1/3 rd of 2nd premolar.
- The horizontal arm contacts with canine in cervical 1/3rd region. to minimize tipping.
- The distal arm of 'U' shape is adapted interproximal between 1st & 2nd premolar.
- The loop should extend 2-3 mm below cervical margin. (0.5 mm away from gingival seat).
- Both the arms of 'U' shaped should be Parallel & in between 1st & 2nd Premolar.
- The horizontal arm adapts along mesial surface of canine so as to help retraction.

- Advantages.

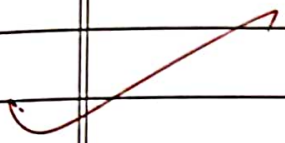

i. easy to construct.
ii. No special plier required.
iii. Require less time for fabrication.

- Disadvantage.

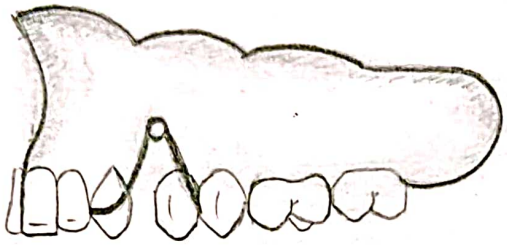

since tag arm is distal to premolar there is greater chance of anchorage loss. since this is shorter & has to adjust more frequently.

- Uses :

Retraction of canine to short distal distance when canine is well defined in the arch.

Self Supported Canine Retractor

Buccal / Self Supported / Hockey Stick type Canine Retractor.

- Aim : To prepare Buccal / Self Supported / Hockey Stick type Canine retractor.
- It is a buccally placed, Pull type Canine retractor.
- It is made of 22 gauge wire.

- Procedure :
- The diameter of coil is about 4 times the diameter of wire.
- The active arm of retractors is always above the coil.
- The coil is placed away from the buccal surface so it lies half the distance between cervical corner of tooth & deep in vestibule.
- Active arm is hooted around cervical margin of canine.
- Distal arm is given bend & is adapted interproximally to palatal surface in manner similar to arm / tag.

- Indications.

i. To retract labially placed canine.

ii. They bring about distal & palatal movement of canine.

- Advantages.

Due to pressure coil, the length of wire is decreased. Hence increases elasticity and reduces

stiffness . The tag arm is mesial to 2nd premolar. Hence anchorage loss is controlled.

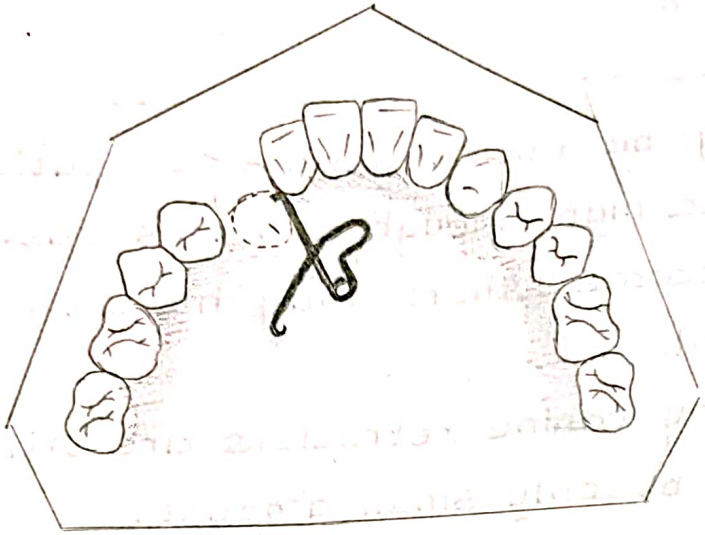

- Disadvantage.

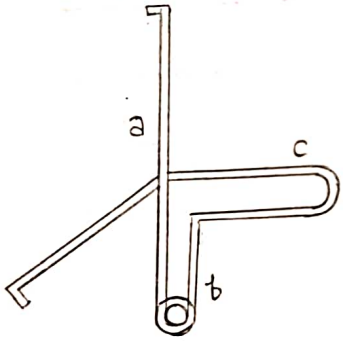

i. The coil may be uncomfortable to patient.

ii. If coil is too high enough , in this case active arm may become short may have limited range of adjustment.

iii. Self correcting canine retractors are stiff. & should be adjusted by only small amount. (0.75 - 1 mm per month).

Palatal Canine Retractor

a Distal arm

b. Helix

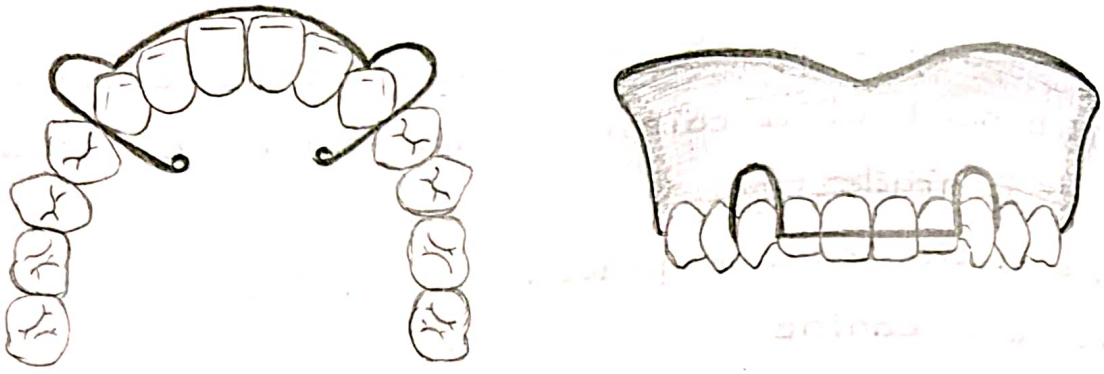

c. Mesial arm.

Palatal Canine Retractor.

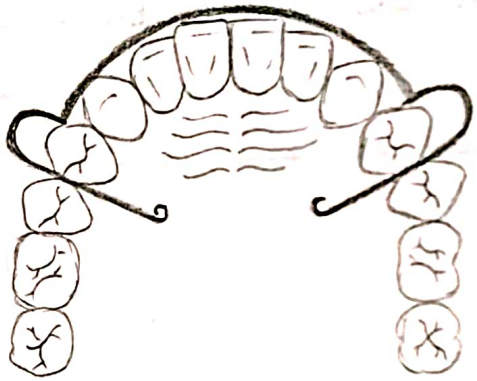

- It is made up of 0.6 mm stainless steel wire.
- It consist of a coil of 3 mm diameter, an active arm and a grade arm.
- The active arm is placed along the long axis of tooth i.e the canine.
- It is activated by opening the helix 2 mm at a time.

- Indications

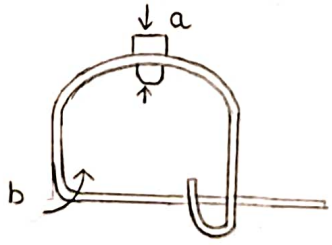

1. In retraction of canine that are palatally placed.

Short Labial Bow

Long Labial Bow

Adjustment of reverse loop labial bow

Labial Bow.

- Aim : To make a labial bow from 21 gauge wire on a ideal cast.
- The labial bow is an evenly curved & symmetrical arch. which contracts labial surface of teeth.
- Each labial bow carrier has usually two symmetrical U loops for activation & adjustment of bow.

- Classification of labial bow.

I. Regular labial bow is from canine to canine.
II. Short labial bow is from lateral incisor to contralateral lateral incisor.
III. Long labial bow is from 1st Premolar to contra. 1st premolar. OR second premolar to 2nd premolar.

- It is usually made of 21 gauge wire. Horizontal arm of bow is adapted to labial surface of incisor at function of incisal & middle 3rd in case of regular labial bow. The 90° bend is given at junction of mesial 1/3 rd & incisal 1/3 rd of canine.
- The U loop is then completed in such a way that distal arm of loop lies in embrassure between canine & 1st premolar.
- Both arms of U loop should be parallel to each other. Lower portion of U should extend 2-3 mm below cervical margin of tooth.

- Uses :

I. To exert retractive pressure on anterior teeth.
II. To limit the labial movement of incisor.
III. To carry the auxillary
IV. To bring about mild rotation & contraction. along with the help of Z spring.
V. Retention.

- Disadvantages :

1. Controll of individual tooth movement is deficient.

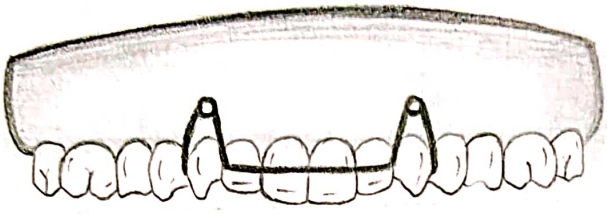

- Activation & Adjustment of labial bow.

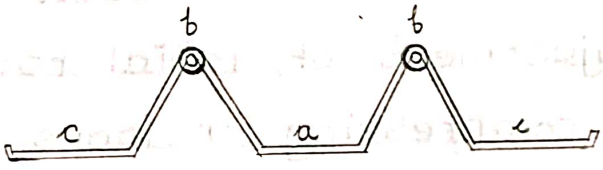

This is done by compressing 'U' loops at the ends & trimming of acrylic on palatal aspect of each component.

- Modification.

I. Robert Retractor.
II. Split labial Bow.
III. Fitted labial Bow.
IV. High labial Bow. apron spring.
V. Labial Bow with reverse loop.

Robert's Retractor

a : Horizontal arm

b : Helix

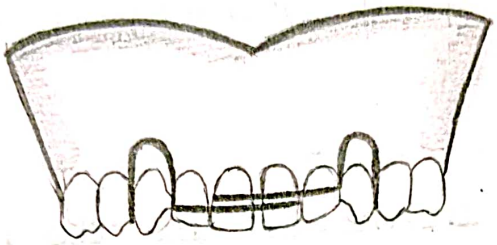

c : Retentive arm

1. Robert's Appliance.

- Indications :

1. It is used when teeth are rarely proclined & they dont have good underlying support esp. in adults.

- In this way it is achieved by decreasing the diameter of wire and un-increasing the effective length.
- We use 23 gauge wire.
- Instead of 'U' loop are prepared, Use 23 gauge on the other end of each loop then extended. and enters the sleeves of rubber to bring these sleeves. then prevents distortion of rubber.

Split Labial Bow
for Retraction

2. Split Labial Bow

- Indication :

1. Assymetrical retraction is possible by activating on 'V' loop more than the other.

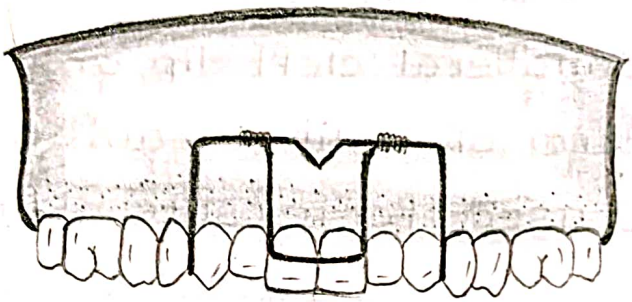

eg. i. Cases of unilateral cleft lip or palate.

ii. Modified form of split in anterior labial bow can be used for closure of midline diastema.

The labial bow has split in anterior region resulting into seperation of buccal arms having a 'V' each segment acts as a continious spring.

- Disadvantages.

Because of thinner gauge of wire it is more likely to distort.

High labial bow with apron spring

3. High Labial Bow with / without Flapper Springs
It has 2 parts.

① Strand / Seat ford which is prepared by 1 mm HRSS wire.

② Active component in happer spring on approns which is prepared from 0.4 - 0.5 mm wire.

- The approns spring can be designed for restoration of the one ore more teeth.
- This is given in cases of excessive proclination. as conventional labial bow is not used because of its tendency to slip cervically.
- Very commonly light focus are generated in labial bow
- It is commonly used in adults with poor bone support.

- Disadvantages.

I. Difficult to fabricate.

II. Risk of soft tissue damage.

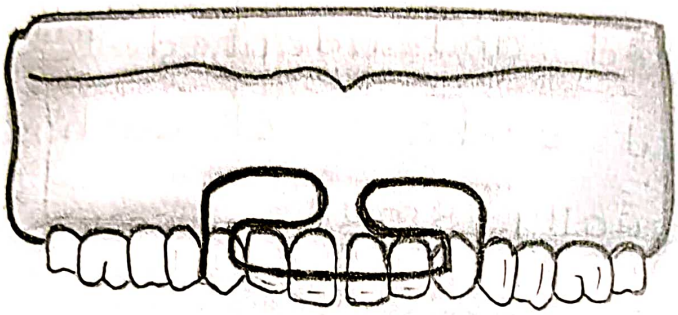

4. Fitted labial Bow.

- This is normally a retentive labial bow.
- It is fabricated using 21 gauge HRSS wire.
- The wire is fabricated and adapted to confine labial bow to labial surface of each other and 'U' loop is usually small.

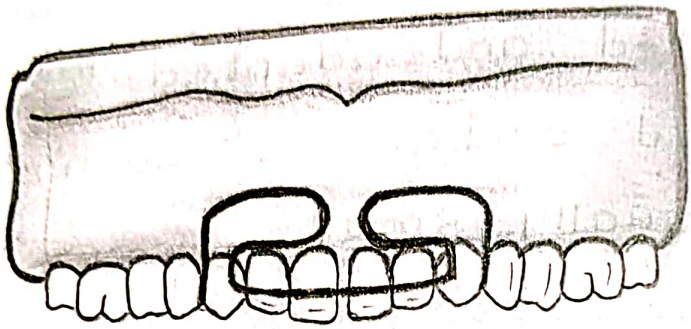

- Indications.

Fitted distal labial bow have position and they are preffered in rotation being corrected inactive treatment.

Mill's Labial Bow

Mill's Labial Bow

5. Mill's Labial Bow.

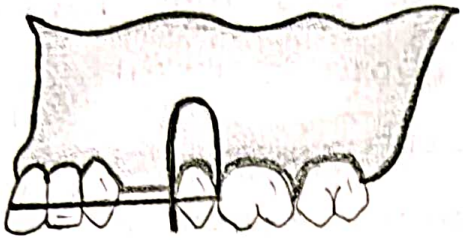

- This made from 0.5 - 0.6 mm HRSS wire.
- This type of labial bow is required on single tooth or on group of teeth.

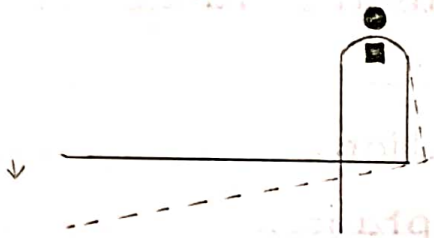

eg. When one or more teeth in an arch are more proclined to each other.

The labial bow has extensive looping wire so as to increase length Flexibility range of action.

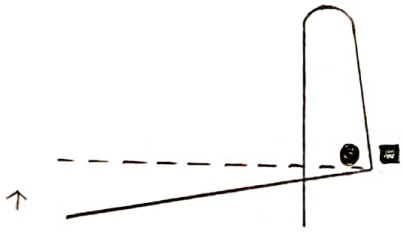

- Disadvantage.
- Difficulty in fabrication.
- Poor patient acceptance.
- Complex design.

Reverse labial Bow

Reverse labial bow is activated by opening the loop This results in lowering of bow more incisally

Compensatory bend made to maintain proper level of bow

6. Reverse Labial Bow

- In this type, tag arm is attatched to mesial to canine i.e mesial to U-loop. This 13 to 23 labial bow.
- The distally placed U loop to canine free end of U loop is adapted occlusally between the lateral incisor & central incisor.
- As the large span of wire is incorporated, the flexibility is increased.

7. Labial Bow Soldered to Adams Clasp.

This is used when retention palate is to be given in patient with 1st or 2nd premolar extraction

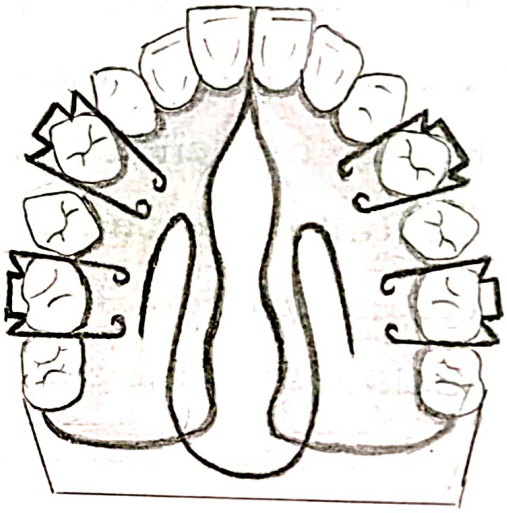

8. Elastics used as labial Bow.

- Instead of an orthodontic wire an elastic can be used for retraction of an anterior teeth.
- labial bow with hooks on either side is fabricated with hooks going distally towards canine.
- The elastic structures between hooks should be on labial surface of incisors, the patient can change elastic regularly.
- The no. of patients visits to orthodontist are reduced because of that.

- Disadvantage.

1. One has to rely on patient to change elastics where patient co-operation is important.
2. The elastic can slip gingivally & can cause gingival trauma.

Coffin Spring

Fabrication of Coffin Spring.

- Waller H coffin introduced this spring in 1881, for lateral expansion of arch.
- A heavy 19 gauge wire is used.

- Indications.

When a different degree of expansion is used or required at anterior & posterior segment of arch, coffin spring is a better option.

- There are 2 types of coffin spring.
  1. Pear Shaped.
  11. Diamond shaped.

- Construction.
- This extends from mesial surface of 1st Premolar to distal surface of 1st molar.
- A big & smooth loop is formed onto wire center for fabrication of pear shaped coffin spring.
- In case of diamond shaped, bends are given on wire in such a way that Anterior, posterior diameter is 2/3 rd, 1/3 rd.
- The spring is kept at uniform distance of 1 mm from palatal form & controlled.

- Advantages :

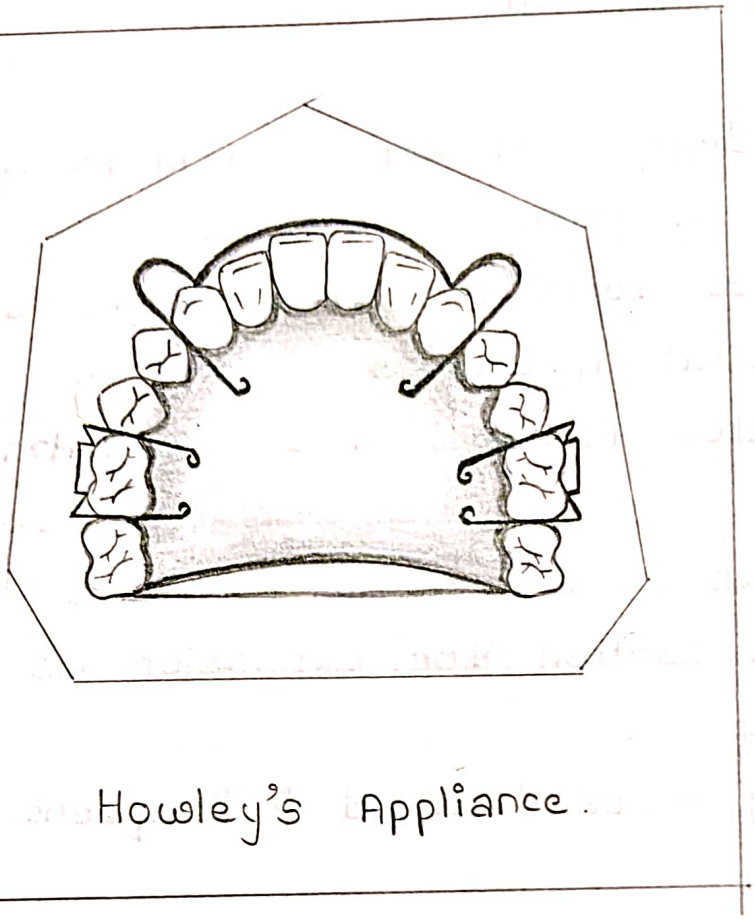

1. Simple to construct.
11. Less bulky

iii. more economical.

- different degree of expansion is possible in anterior & posterior segment.
- The modified form of coffin spring is used on mayofunctional appliances.
eg. Bayonates Palate, Free activation.

- Disadvantages
- No pressure controll for expansion as activation is arbitrary.
- Force decay is used rapid & frequent adjustments are required.
- It may enterfere with tonight tongue movement & speech.

- Activation.
For anterior arch expansion, It is activated, posteriorly at the base of pear shaped / diamond shape in midline for posterior arch expansion. with plier. The optimal activation should be 4 mm.

Howley's Appliance.

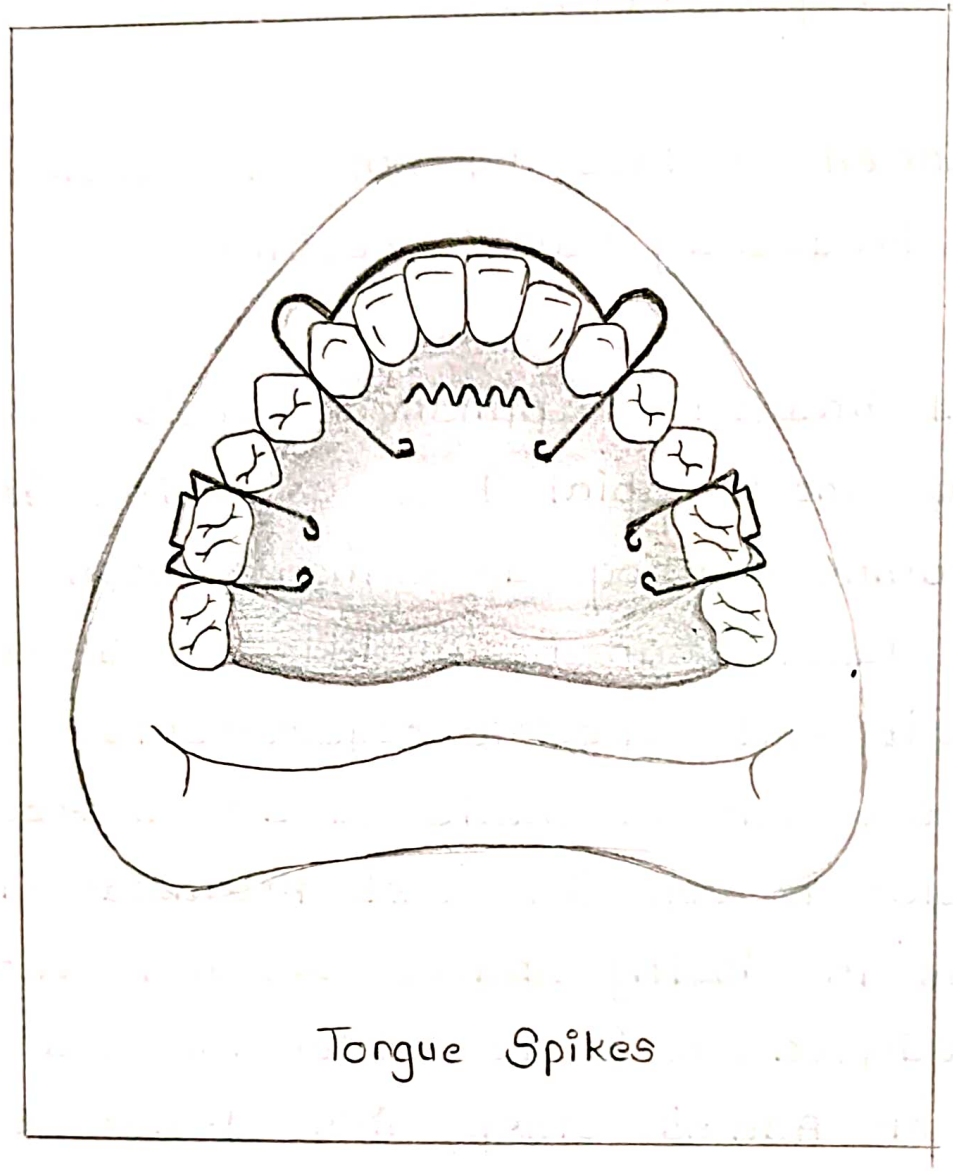

Hawley's Appliance.

- It was designed in 1920 by charles Hawley
- It is more frequently used retainer.

- The classical Hawley's appliance consists of clasp on molar & short labial bow extending from canine to canine having adjustment hoops.
- This simple design can be modified in several ways to exit suit specific requirements.
- This labial bow can be made to extend from one first premolar to opposite first premolar. This design helps in closing spaces distal to canine.
- Anterior modification is to solder the bow to the bridge of Adam's clasp. This design avoids the risk of space opening between canine & premolar due to cross over wire.
- Fitted labial bow can also be used to offer excellent retention.
- Anterior kite planes can be incorporated to correct deep bite cases.

- Advantage.

I. Ease of fabrication.
II. Simple design.
III. Minimal patient discomfort due to reduced bulk.
IV. So, acceptable to most patients.

Tongue Spikes

Fabrication of Tongue Spikes.

- Aim : To construct Tongue spikes with 32 gauge HRSS wire.

- Appliances : Fabricated to correct the habit of thumb sucking. However appliance with tongue spikes should not be given to children below 5 years of age.

- Construction :

I. A piece of wire is 1st straightened at a distance (1 & ½ inches) end of wire.

II. First spike is normally maintained at about 2 mm more than cervico - occlusal height of central cervical incisor of patients model.

III. The height of spike may be between 10-12 mm on standard cast and 4 spikes are prepared.

IV. The location of spike should be line joining canine & 1st premolar on both sides.

V. The first spike should be computed by giving a sharp downward bend

VI. The distance between two arms of spikes should be 1mm & the distance between 2 adjacent spikes are 2 mm.

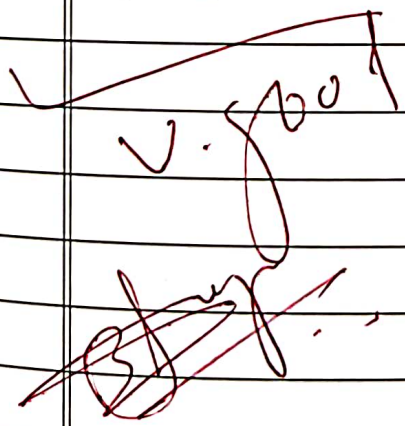

VII. The base of spikes should be at the same level so that they remain were in acrylic

- Advantages
- They are easy to fabricate.
- They are very effective in correcting tongue thursting habit.

- Disadvantage.
- Being a part of removable appliance.
- Patient co-operation is essential for success
- It may not be effective in correcting tongue thursting due to macroglossia.
- It will also not correct complex tongue thrusting with skeletal open bite unless skeletal problem is corrected.

- Mode of Action.

It serves as a constant reminding to patient & also act as mechanical barrier to prevent tongue thursting.

Model Analysis - 1

- Case No. : Jyoti Pawar.
- Analysis of Model Seperately.

I. Individual Tooth Analysis.

10	11	6	7	8	7.8	9	9	7	8	7	6	11	10
7	6	5	4	3	2	1	1	2	3	4	5	6	7
7	6	5	4	3	2	1	1	2	3	4	5	6	7
10	11.5	6	7	7	6.5	6	6	6.5	7	7	6.5	12	11

II. Analysis of whole arch.

Particulars	Maxillary	Mandibular
Total Tooth material (1M to 1M)	96.8 mm	89 mm
Sum of Incisors	32.8 mm	25 mm
Arch Symmetry	Symmetrical	Symmetrical
Arch Shape	U Shape	V
Mid line	Accurate	Accurate
Curve of spee	–	2 mm
Palatal depth	19 mm	–
Crowding	–	–
Spacing.		7 mm

Analysis of models in occlusion.

Model Particulars	Right	Left
Angle's Molar Relation	Class I	Class I
Canine Relation	Class I	Class II
Incisor Relation	Class I	Class I
Proclination	(5-2) = 3	(4-2) = 2
Overjet	5	4
overbite	2	2
Midline	accurate	accurate
Crossbite	–	–

Diagnosis

Angle's Class I Malocclusion with proclined upper & lower incisors and spacing in both arches.

III. Indices.

A. Pont's Index.

Arch width in premolar region. = $\frac{32 \times 100}{80}$ = 40

Arch width in molar region. = $\frac{32 \times 100}{64}$ = 50

Region	Actual	Calculated	Difference
Premolar	38	40	2
Molar	49	50	1

. Inference : As measured value is less than calculated expansion is needed.

B. Ashley Howe's Index.

PMBAW % Formula : $\frac{42}{96} \times 100 = 43.75$

Inference : Borderline Case.

b. PMBAW < PMD.

43.75 < 45 Expansion Not Possible.

2. For Mandibular Arch.

A. Nance & Carey's Index.

Linear Dimension	Brass wire	Calculated	Difference.
66.5		65	1.5

Inference : Non - Extraction case.

3. Inter Arch Analysis : Boltons

Anterior Ratio = $\frac{\text{Man 6T}}{\text{Max 6T}} \times 100 = \frac{39 \times 100}{48.5} = 80.41$

Overa Anterior ratio $\geq$ 77.2

$\therefore$ Corrected Anterior ratio = $\frac{77.2 \times 48.5}{100} = 37.44.$

Overall ratio = $\frac{\text{Man 12T}}{\text{Max 12T}} \times 100 = \frac{91.3 \times 96}{100} = 92.7$

Overall ratio > 91.3

$\therefore$ Corrected Overall ratio = $\frac{91.3 \times 96}{100} = 89.64$

Inference

Overall Mandibular excess = 89 - 87.64 = 1.64.

Anterior Mandibular excess = 39 - 37.44 = 1.56

10	10	7	7	7	7	6	6	7	7	7	8	10	10

2] Analysis of whole arch.

Particulars	Maxillary.	Mandibular
Total Tooth material	100	89
Sum of incisors	36	26
Arch Symmetry	Symmetrical	⊤⊢
Arch Shape	U	U
Midline	accurate	⊤⊢
curve of spee	–	3mm
palatal depth.	24 mm	–
crowding	5 mm	3 mm
spacing	–	–

- Analysis of models in occlusion.

Particulars	Maxillary	Mandibular
Angle's molar Relation	class I	class II
Canine Relation	class I	cross bite
Incisor Relation	class II	class II
Proclination	Max = 3	Mand = 0
Overjet	2	2
overbite	2	3
Midline	accurate	⊣⊢
Cross bite	–	–

- Diagnosis :

Angle's class I malocclusion on right & class II on left side, crowding in both arches & proclination in maxillary arch.

3. Indices.

- For Maxillary Arch.

A] Pont's Index.

1. Arch width in Premolar (4/4) = $\frac{36 \times 100}{80}$ = 45
2. Arch width in molar (6/6) = $\frac{36 \times 100}{64}$ = 56

Region	Actual	Calculated	difference
Premolar	34	45	11
Molar	46	56	10

Expansion is Needed.

b. Ashley Howe's Index.

PMBAW % Formula = $\frac{41}{90} \times 100 = 45.5$

Inference = Non-extraction case.

PMBAW (41) > PMD (40) = Expansion is possible.

- for mandibular Arch.

A] Nance & Carey's Index.

LD.	calculated	difference
69	66	3

Inference : Non extraction.

B. Bolton's Analysis.

Anterior ratio = $\frac{\text{Man 6T} \times 100}{\text{Max 6T}} = \frac{40 \times 100}{52} = 76.9$

A.R < 77.2

∴ Corrected A.R = $\frac{77.2 \times 52}{100} = 35.51$

Overall ratio = $\frac{89 \times 100}{100} = 89$.

∴ O.R < 91.3

∴ Corrected O.R = $\frac{91.3 \times 100}{100} = 91.3$

- Inference

Overall Maxi excess = 0

Overall Anterior maxi excess = 7.75

• Analysis of Space.

Canine relation	I	I
Incisor relation	III	III
Proclination	0	0
Overjet	2	2
overbite	openbite	openbite.
midline	accurate	⊤
crossbite	present	Absent.

- Diagnosis

Angle's class II malocclusion with crossbite on right side & open bite in anterior region.

C. Indices.

For maxillary arch.

a. Pont's index.

Arch width in premolar region = $\frac{32 \times 100}{80}$ = 40

Arch width in molar region = $\frac{32 \times 100}{64}$ = 50

Region	Actual	Calculated	difference
Premolar	39	40	1
Molar	46	50	4

Inference : Expansion is needed.

b. Ashley Howe's Index.

$\frac{43}{96} \times 100 = 44.79$

Inference - a. Non extraction case.

PMBAW (43) > PMD (41) - expansion possible.

- For Mandibular Arch.

a. Nance & Carey's index.

LD.	calculated	Difference
66	70	4.

Inference : 2nd premolar (5/5) extraction.

3. Bolton's Analysis.

Anterior Ratio = $\frac{37}{47} \times 100 = 78.7$

AR > 77.2

∴ Corrected = $\frac{77.2 \times 47}{100} = 36.28.$

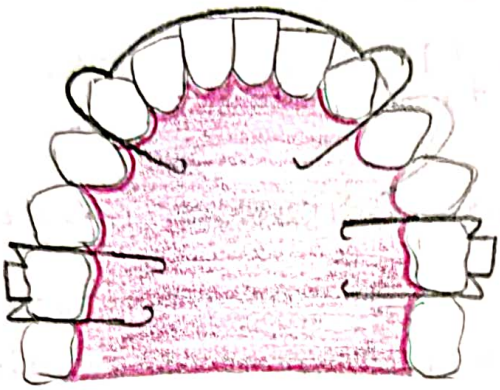

Overall Ratio = $\frac{87}{96} \times 100 = 90.6$

O.R < 91.3

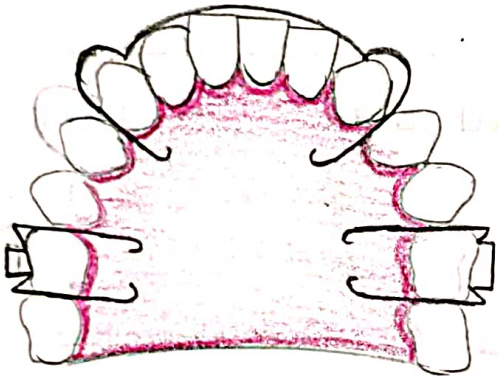

∴ corrected = $\frac{90.6 \times 87}{100} = 78.8$

Inference : overall Max excess = 87-78.8 = 8

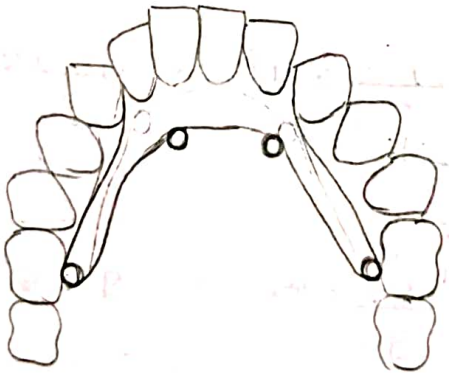

anterior Mand excess = 0.7.

Labial Bow

Hawley's Appliance

overbite	4	4
midline	accurate	—
crossbite.	—	—

- Diagnosis.

Angle's class I malocclusion with proclined upper incisors & crowding in mandibular arch and spacing in maxillary arch.

C. Indices.

- Maxillary arch.

a Pont's index.

Arch width in premolar = $\frac{36 \times 100}{80}$ = 45

Arch width in molar = $\frac{36 \times 100}{64}$ = 40.6

Region	Actual	Calculated	difference
Premolar	47	45	
Molar	51	40.6	

- Inference.

Expansion Not needed

b. Ashley Howe's index.

PMBAW % = $\frac{45}{102} \times 100 = 44.1$

inference = Non extraction case.

- for Mandibular arch.

a. Nance & carey's

LD.	calculated	difference.
70	75	5

Inference = 2nd premolar extraction.

8. Bolton's Analysis.

Anterior ratio = $\frac{88}{52} \times 100 = 73.07$.

Since A.R < 77.2.

Corrected AR = $\frac{52 \times 73.07}{100} = 40.14$.

Overall ratio = $\frac{96}{102} \times 100 = 94.11$

Since O.R > 91.3.

Corrected OR = $\frac{102 \times 91.3}{100} = 93.12$.

Inference

1. Overall mand excess = 1 mm.

Anterior max excess = 3 mm.

(HEAD OF DEPARTMENT)

Date ...19/10/2023.....

QUESTIONS :-

1. What is the type of articulator you are using ?

→ Non-arcon, Non-adjustable, mean value articulator (permits horizontal & vertical motion).

2. What points do you check prior to mouting to wax occlusal rims on the articulator ?

1) check position of vertical incisal pin, it should be at centre of incisal table.
2) The upper end of vertical pin should flush with upper axis of articulator.
3) Horizontal incisal pin should be in its position marking midline marked on occlusal rims.
4) Rims occlusal plane considered as midline of an articulator.

3. Is this articulator you are using a arcon or non-arcon type of articulator ?

→ Non-arcon type of articulator in which condylar elements are located on upper member and condylar guidance on lower member of articulator.

Date	Nature of Work Done	Sign of Instructor
27/3/22	Transfer of maxillary and mandibular jaw relation to articulator.	

QUESTIONS :-

1. **Why should you soak the articulator with mounted casts in cold water prior to the arrangement of teeth?**

→ To avoid the spillage of wax.

2. **What is the position of the maxillary 1st molar?**

→ The position of maxillary 1st molar in intraorally is average 0.3mm above parotid gland.
→ mesiobuccal cusp of 1st molar sets in central fossa of mandibular 1st molar.

3. **What is Pound's triangle?**

→ It is triangle formed by lines joining the apex of canine & the retromolar pad.

4. **What is vertical overlap?**

→ Vertical overlap between upper & lower incisors is overbite
Average (2mm) :

5. **What is horizontal overlap?**

Date	Nature of Work Done	Sign of Instructor
13/4/23	Complete teeth arrangement of	
	max. & mand. set (1) (max &	
	mand. [Anterior & posterior teeth].

01 CASE HISTROY : 01

Date: 7/10/22

Pt. Name: Kajal Kotwal — Reg No 107300

Age: 28 yrs — female

married — pune

Housewife — matrge

⇒ Chief complaint: Pt. c/o of fractured teeth and Pain in lower Right Back Region of Jaw, since 5days.

⇒ HOPI: Pt. was apperently alright 5 days back. Began experig Pain which started suddenly was dull in character and was on stimulus. Pt gave H/o Discomfort on Biting and Pain was dull in character.

⇒ History: No Relevant finding

A. Past Dental History: RC Treated 2 + 6

B. Past medical History: No Relevant finding.

C. Family History: No Relevant History

D. Personal History

1. maintainre of oral Hygiene

a. method: Brush and Paste; Horizontally

b. frequency: 1/day.

2. Dietary habits

→ mixed diet

3. Tissue Abuse History

→ Alcohol NRF yrs NRF times/day

→ Bidi NRF yrs NRF times/day

→ others NRF yrs NRF times/day.

⇒ Examination

A. Genereal examination

1. Built: Ectomorphic

2. Gait: No abnormality detected

3. Skin : Normal

4 vital sigin

→ Temperature: afebril → Respiratory rate: 16 cycle/m

→ Pulse rate: 73 beats/min → B/P :- -

→ examination of Sigins: No Relevant findyng.

B. Extra oral examination

1. facial symetrey : grossly symetrical and profile straight profile.

2. eyes: NAD 3. ears: NAD 4. Nose: NAD

5. Lips: Competent

6. TMJ: Normal, movement: Normal

7. Lymph Node: Non-Tender and Non Palpable.

8. muscle of mastication: NAD

9. Salivary gland NAD

C. Intra-oral examination

A. Soft tissue examination

1. Labial mucosa: NRF

2. Buccal mucosa: NRF

3. Tounge: NRf

4. Lips: NRf

5. soft palate: NRF

6. Hard Palate: NRf

7. floor of mouth

- whartons : NAD

- Lingual vari casity : absent

8. Gingival examination

- color: Pink to Brown, - B.O.P: tve.

- Presence of stippling, - consistency: from

- size: Normal.

9. Periodontal examination : Ab

10. edentulous ridge : ab

11. Tonsillar and Aharyngeal: NAD areas

b. Hard tissue examination

1. Teeth

1. Teeth present : 48 47 46 45 44 43 42 41 | 31 32 33 34 35 ...

2. missing Teeth : 36

3. carious teeth : 46, 36, 37

4. Filled : 26 (RC Treated)

5. calculus and stain : ++

6. occlusion

- angles class I

⇒ Detailed examination of area of Chief complaint

A. teeth in the area of CC : 46

B. Swelling : No Relevant finding

→ on palpation : No Relevant finding

→ Spaces involved : No Relevant finding

⇒ Provisional Diagnosis

1. area of C.C : apical periodontitis $\bar{c}$ $\frac{+}{+}$

other diagnosis : Chronic pulpitis $\frac{\bar{c}}{+}$

gingivitis, acute pulpitis 36, 37

⇒ Investigation : IOPA $\frac{\bar{c}}{46}$

1. IOPA region : mandibular Left Back Region of Jaw.

2. Teeth completely seen 46 47 48

3. Partially seen : -

4. Anatomical Land marks

	Radiopaque	Radiolucent
a. Dental	enamel, Dentin	Pulp
b. osseous	mandibular canal, Lower Border of mandible	PDL space

5. most pathologic Tooth : 46

→ Crown: irregular, ill defined radiolucency seen on Distocervical surface of tooth involving enamel, dentin and pulp
→ Roots: 2 Roots with patent root canalas.
→ PDL space: widening in middle and apical 1/3rd.
→ Lamina Dura: continious in cervical, discontinious in middle and apical 1/3rd.
→ Periapical area: a ~~well defined~~ diffuse radiolucency seen
→ Interdental bone: No abnormality.
→ Any other finding: -
6. Other compitley seen teeth ē ⊣
→ Crown: an well defined irregular radiolucency seen involving enamel, dentin pulp.
→ Roots: 2 roots with patent canalas.
→ PDL space: No widening
→ Periapical area: No abnormalety
→ Interdental bone: No abnormality
⇒ Radiographic Diagnosis:
1. Periapical abscess ē ⊣
⇒ Radiographer Differential Diagnosis:
1. Periapical cyst.
⇒ Radiographic faults.
1. clip marks
2. Dark radiograph
3. fixer stain
⇒ final Diagnosis
1. Periapical abscess ē ⊣
2. Chronic irreversible ē ⊣
Pulpitis
3. Chronic generealized marginal gingivitis.
4. Reversible pulpitis ē 36,37

⇒ Treatment Plan

1. Preliminary
   - Mefanic acid 400 mg bid 3day
   - Actiomenophen 500mg bid 3day

2. non-surgical
   - supragingival scaling

3. Restorative.

→ Lamina Dura : continious

→ Periapical area : NAD

→ interdental bone : Horizontal Bone loss

→ any other finding : -

7. Radiographic Diagnosis

.. condensing osteitis ε 36

8. Radiographic Differential Diagnosis :

1. Inflamatory lession
2. endo - perio lession
3. Resolved apical periodontitis

9. Radiographic fault

1. clip mark

Radiographic interpretation (07)

1. region : mandibular Right Back

2. Completely seen teeth 46 47 45

3. partially seen Teeth 44

4. Anatomical Land marks

	Radiopaque	Radiolucent
a. dental	enamel dentin	pulp space
b. osseous.	Lamina dura cancellous Bone.	-

5. most pathological Tooth 46
an irregular ill-defined radiolucency involving
→ crown: enamel, dentin, encroaching pulp

→ Root : 2 roots with 2 root canals
widening in furcation and mesial 1/3rd

→ PDL space : of mesial root.

→ Lamina dura : continuous

→ periapical area : dilated marrow spaces

→ interdental bone : Horizontal Bone loss

→ any other finding : —

6. other complitley seen teeth 47 43

→ crown : NAD

→ Root : NAD

→ PDL Space: No widening

→ Lamina dura: continuous

→ Periapical area: NAD

→ interdental bone: Horizontal Bone Loss

→ any other finding: Impacted Mandibular Molars

7. Radiographic Diagnosis:
   1. apical periodontitis ⌐ 46

8. Radiographic differential
   -

9. Radiographic fault
   clip mark

Radiographic interpretation (68)

1. region: maxillary Right Back

2. completely seen teeth 18 17 16 15

3. partially seen teeth. 14

4. Anatomical Landmarks

	Radiopaque	Radiolucent
a. Dental	Enamel Dentin	pulp space
b. osseous	max. sinus floor Lamina Dura	max. sinus marrow space

5. Most pathologic Tooth 16

→ crown: an ill defined, irregular radiolucency involving enamel, dentin, pulp.

→ Root: 2 roots with 1 patent canal

→ PDL space: widening seen

→ Lamina Dura: Discontinuous

→ periapical area: an ill defined irregular radiolucency seen

→ interdental bone: NAD

→ any other finding: Pneumatization of floor of maxillary sinus floor.

6. other completley seen teeth

→ crown : 2 is an ill defined radiolucy involving enamel dentin and pulp.

→ ROOT : NAD

→ PDL SPACE : widening @ 1 5

→ lamina dura : NAD i.e continuous

→ periapical area : NAD

→ interdental bone : NAD

→ any other finding -

7. Radiographic Diagnosis

1. periapical abscess @ 1 6
2. apical periodontitis @ 1 5

8 Radiographic differential

1. periapical granuloma @ 1 6

9. Radiographic fault

1. clip mark
2. Light radiograph

Ab

Radiographic interpretation of

1. region : maxillary front Regin

2. most complitley seen Teeth 21 22 23 24

3. Particuly seen Teeth "

4. Anatomical Landmarks

	Radiopaque	Radiolucent
a. Dental	Enamel	Pulp space
	Dentin	
		marrow space
b. osseous	nasal septum	nasal fossa
	inf. turbinates	
	ant. nasal spine	

5 most Pathologic Tooth 24

→ Crown : Loss of enamel, dentin sugestive of gross crown destriction

→ Root : 2 root piece remain

→ PDL space : widening seen

→ Lamina Dura : Discontinuous

→ Periapical area : a small radiolucency visible on distal side

→ interdental bone : NAD

→ any other finding : -

6. other compitley seen Teeth 21 22 23

→ Crown : NAD

→ Root : NAD

→ PDL Space : No widening

→ Lamina Dura : continious

→ periapical area : NAD

→ interdental bone : NAD

→ any other finding : -

7 Radiographic Diagnosis

1. Periapical abscess K24
(Initial stage)

8 Radiographic Differential

1. periapical granuloma K24
2. apical periodontis K24

9. Radiographic fault

1. Clip mark
2. Developer stain

Radiographic interpretation 10

1. region : maxillary front left

2 completely seen teeth : 11 12 13 14

3 Partially seen Teeth 15

4 Anatomical Landmarks

	radiopaque	radiolucent
a. dental	enamel dentin	pulp space
b. osseous	ant. nasal spine floor of nasal fossa	max. sinus incisive fossa PDL space

5. most Pathologic Tooth 13

→ Crown : an radiolucey seen in crown region
sugestive of complete loss of crown

→ Root : 1 root piece remain

→ PDL space : widening seen

→ Lamina Dura : not continious

→ periapical area : a white line near to mesio aspect of root

→ interdental bone : Horizontal Bone Loss

→ any other finding : -

6. Other completely seen teeth 11 12 14

→ Crown : NAD

→ Root : NAD

→ PDL Space : widening

→ Lamina Dura : not continuous

→ Periapical area : NAD

→ interdental bone : Horizontal Bone loss

→ any other finding : -

7 Radiographic Diagnosis

1. healed apical periodontitis ☞ 13
2. periapical abscess ☞ 13 (inricial stage)
3. ~~generalized periodontitis~~

8 Radiographic Differential

1. apical periodontitis ☞ 13

9. Radiographic fault

1. clip mark
2. developer stain

Radiographic interpretation (1)

1. region : mandibular lower right

2 compitley seen teeth 46 47 48

3. Partially seen teeth -

4. Anatomical land marks

	Radiopaque	Radiolucer
a. Dental	enamel	Pulp spac
	Dentin	
b. osseous	external oblique	Marrow
	Cuncellous Bone	Spale

5. most pathologic Tooth 46

→ crown : a full metal crown till CEJ

→ Root : 2 roots with obturating material

→ PDL space : widening

→ Lamina Dura : not continious

→ Periapical area : a diffuse ill defined radiolucency extending from the furcation.

→ interdental bone : Horizontal bone loss

→ any other finding

6. other compitley seen 47, 48

→ crown : Filling ∈ 47 absent crown ∈ 48

→ Root : 48 has curved root

→ PDL space : widening

→ Lamina Dura : Discontinuous

→ Periapical area : NAD

→ Interdental bone : horizontal Bone Loss

→ any other finding : -

7 Radiographic Diagnosis

1. Periapical abscess ∈ 46
2. apical periodontis

8. Radiographic Differential

-

9. Radiographic fault

1. clip mark
2. Loss in sharpness

Radiographic interpretation (12)

1. region : mandibular left Back

2 Compitley seen Teeth : 36 37 35

3. Partially seen Teeth 34

4. Anatomical Landmarks

	Radiopaque	Radiolucent
a. Dental	Enamel	Pulp Space
	Dentin	
b. osseous	Lamina dura	marrow space
	cancellous Bone	
	alveolar crest Bone	

5. most Pathological Tooth 36

→ crown : comple loss of crown

→ Root : Root piece visible

→ PDL space : widening

→ Lamina dura : Discontinuous

→ Periapical area : an ill defined difuse radiolucency seen

→ interdental Bone : angular Bone Loss evident

→ any other finding -

6. other completey seen teeth 35 · 37

→ crown : NAD

→ Root : NAD

→ PDL space : Widining seen

→ Lamina Dura : continuous

→ Periapical area : NAD

→ interdental Bone : Horizontal Bone loss

→ any other finding -

7. Radiographic Diagnosis

1. Periapical abscess c 36
2. generecuized periodontis.

8 Radiographic Differential

1. Periapical granuloma

9. Radiographic fault

1. clip marks
2. - scratch mark
3. Low contrast

Radiographic interpretation (13)

1. region : mandibular left Back

2. completely seen teeth 37 38

3. Partially seen teeth. 36

4. Anatomical landmarks

	Radiopaque	Radiolucent
a. Dental	enamel dentin	Pulp space
b. Osseous	Lamina Dura cancellous Bone alveolar crest	nutrient canal Submandibular fossa int. alveolar canal

5. most Pathologic Tooth 37
an ill defined irregular radiolucency on the distal aspect

→ crown at cervical 1/3rd involving enamel and dentin

→ Root : 2 roots with 1 Patent canal

→ PDL space : widening

→ Lamina Dura : continious

→ Periapical area : NAD

→ interdental bone : Horizontal bone loss

→ any other finding : Dilated marrow space.

6. other completely seen teeth 38

→ crown : radiopaque filling done

→ ROOT : 2 roots with 2 patent canals

→ PDL space : No widening

→ Lamina dura : continious

→ periapical area : Horizontal Bone Loss

→ interdental bone : NAD

→ any other finding -

7 Radiographic Diagnosis

1. Proximal caries [37]
2. mild periodontitis

8. Radiographic Differential

-

9. Radiographic fault

1. clip marks
2. Light radiograph.

Radiographic interpretation

1. region : mandibular R9ght Back

2 completley seen teeth 44 45 47

3 Particuly seen teeth 43

4 Anatomical Landmarks

	Radiopaque	Radiolucent
a. Dental	Enamel	Pulp space
	Dentin	
b. osseous	cancellous Bone	marrow space
	Lamina Dura	
	Alveolar crest Bone	

5. most pathologic Tooth 45

→ crown: an ill defined irregular radiolucey seen on mesical aspect middle 3rd to apical 1/3rd.

→ Root : 1 root with a patent canal

→ PDL space: widening seen on apical 1/3rd of the

→ Lamina Dura : not continuity

→ Periapical area: an well defined radiolucey visible on the apex

→ interdental bone: Horizontal bone loss

→ any other finding : -

6. Other complikey seen teeth 94 47

→ crown : NAD

→ Root : NAD

→ PDL space : NO widening

→ Lamina dura : continuous

→ Periapical area : NO abnormality detected.

→ interdental bone : Horizontal Bone loss

→ any other findings: Pathologic mesial tilt of 47

7. Radiographic Diagnosis

1. apical Periodontitis 7 95

8. Radiographic Differential

-

9. Radiographic fault

1. clip mark

Radiographic interpretation - 15

1. region : maxillary left BAC

2 completley seen teeth 24 25 26 27

3 portialy seen teeth 28 23

4. Anatomical Landmarks

	Radiopaque	Radiolucent
a. dental	enamel dentin	pulp spac
b. osseous	septa in max sinus	max sinus inverted Y line

5. most pathologic Tooth 25

→ crown : an ill defined irregular radiolucy seen involving enamel, dentin and pulp

→ Root : 1 root with patent canal

→ PDL space : widening seen at cervical, middle and apical 1/3rd.

→ Lamina Dura : continious

→ periapical area : well defined corticated radiolucency which is about 1.5 cm seen near apical 1/3rd.

→ interdental bone : WNL

→ any other finding -

6. other completely seen teeth

=> 24

CASE HISTORY

Date : 15/11/22

Name of the Student : omkar.r.shelke OPD No.

Teacher: Dr. Smruti Malam Case History No. 4

PATIENT'S INFORMATION :

1) Name : Kartik Raikar
2) Nick Name : Munna
3) Date of Birth : 08/08/19
4) Age: 4years (4/12)
5) Gender : Male
6) Address : lohegaon.
7) Telephone No : 8805862160
8) Mother tongue : Marathi
9) Name of the accompanying person :

PARENTS	FATHER	MOTHER
a) Name	Sujit Raikar	Renuka Raikar
b) Occupation	marketing	Homemaker
c) Education	B.com	12th
d) Income	30000/month	

10) Paediatrician/ Family Physician's Name & Contact No.

CHIEF COMPLAINT : [Origin/ Onset/Duration/Progress/Nature of Plan/ H/o Present illness/ Aggravating Factors/ Relieving Factors]

c/c : patient c/o pain in upper left back region of jaw since 1 month
H/o pt - spontaneous pain, dull, continuous pain & lasts for minutes. Aggregavates on mastication.
H/o Medication : Amox syrup 3 times for 3 days.
Metronidazole (200 mg) - 2 times. 3 days.

2) **HISTORY :**

i) **FAMILY HISTORY**

1) **Past Medical History :** no relevant history

- Premature / Full term - full term ✓
- Birth Weight : 3.4 half kg
- H/o Hypoxia/ Cyanosis/Jaundice : no relevant history
- H/o Medication : no relevant history
- H/o allergy : no relevant history
- H/o illness and hospitalization no relevant history
- Immunization Status : Incomplete (complete upto 6 months ago)

2) **Past dental History :** no relevant history

- Dental Visits :
- Dental Treatment

- Behavior of Child during Dental Visit + positive

- Past Dental experience : –

II) INFANT FEEDING HISTORY :

1) H/O Breast feeding

- Duration : for 3 years

- Frequency : 4-5 times a day

- Night feeding : positive history

2) H/O Bottle feeding no relevant history

- Duration Frequency ;

- Night Feeding:

- Contents of Bottle:

3) Use of Pacifiers : no relevant history

4) H/O Weaning : 7 month of age

III) DIET :

1) Meals per day : 3 - 4 times a day

2) Diet Includes: Dal
chawal
Roti
Sabji

3) Type and frequency of snaks: chocolate - 5 times
tea - 3 times
chips - 1 time

4) Balanced Diet:

5) Any other :

food score
chapati - 6x3 = 18
bhaji - 6x3 = 18
dal - 6x2 = 12
Rice - 6x2 = 12
tea - 6x2 = 12
chocolate 10x3 = 30
chips - 10x4 = 40
= 136

dental health score = 136 - 70 = 66

Patient education

chips: 1x10 = 70

Sugar score = tea = 5x2 = 10
chocolate = 10x5 = 50

IV) ORAL HYGIENE MAINTENANCE

1) Whether child brushes himself/herself : ✓

2) Since when: 1 to 1½ years

3) How many times: once

4) Which tooth paste (fluoridated/Non fluoridated) colgate - fluoridated

5) How often does he/she change his/ her tooth brush: after 7 to 8 months

V) Trauma to teeth and supporting tissues :

1) When :

2) Where: Injury to lips (3-4 times)

3) How: falling on ground during playing

4) If fracture, (?)

VI) ORAL HABITS (Duration/Frequency/ Intensity)

1) Tongue Thrusting :

2) Thumb sucking:

3) Lip/Nail Biting

4) Mouth Breathing:

5) Bruxism:

6) Any other ;

} no relevant history

VII) BEHAVIORAL RATING SCALE :

1) Frankl's Behavior Rating Scale: positive (+)

3) EXAMINATION :

1) GENERAL

- Height : 3 feet
- Weight: 12lb kg
- Somatoype:
- Gait:
- Skin :
- Nails:
- Hair:

no Abnormality detected

2) HEAD, NECK & FACE

- Symmetry : Bilaterally symmetrical
- Profile : straight
- T M J: no clicking no deviation
- Lips: incompetent
- Lymph nodes : Palpable /non Palpable ✓ Tender/Non Tender ✓

INTRA- ORAL

1) Oral hygiene status :
2) Deposits:
   - Hard : +
   - Soft +

3) Stains :

- Intrinsic
- Extrinsic

4) Soft tissue Examinations ;

- Lips / Labial Mucosa
- Buccal Mucosa :
- Floor of Mouth :
- Tongue :
- Palate:
- Tonsils :
- Gingiva:

no abnormality detected

5) Hard Tissue Examination :

A) **No. of teeth Present ;** 20

A) Primary : 20

B) Permanent:

B) Dentition :

C) Teeth present (FDI System)

55 54 53 52 51 61 62 63 64 65

85 84 83 82 81 71 72 73 74 75

D) Dental Age :

5 years

E) Occlusion :

1) Primary Dentition : Mesial step

2) Mixed / Permanent Dentition

- Overjet : normal
- Overbite : decreased
- Deepbite :
- Crossbite: } no relevant history
- Any other Findings :

F) **Teeth restored (Material used)**

G) **Dental Caries :** proximal caries ⊏ 51, 61
smooth surface caries ⊏ 52, 62
occlusal caries ⊏ 54, 55, 75, 84, 85

H) **Fractured tooth :** distoproximal caries ⊏ 64
no relevant history

Classification :

I) **Developmental defects :** no relevant history

J) **Discoloration of tooth :** no relevant history

K) **Mobility :** no relevant history

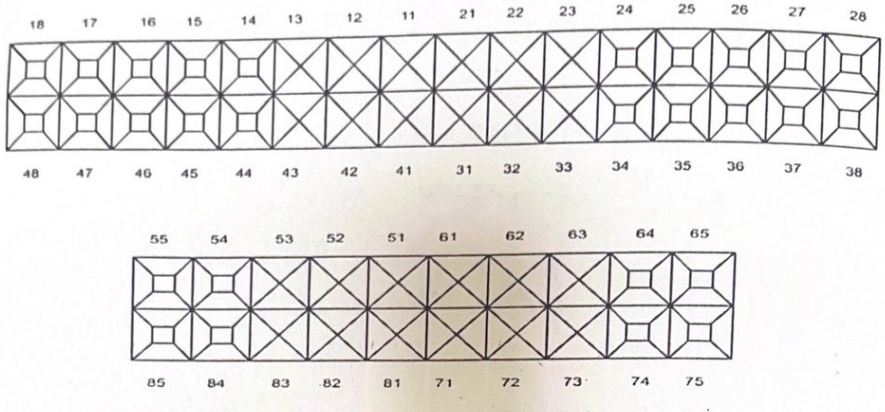

L) **Pulp :**

A) Not exposed

B) Exposed ⊏ 64

M) **Missing teeth :**

DMFT/ Deft : d = 10 = 10
e = 0
f = 0

CASE HISTORY.

S. No : 01 **Year :** 2019

Patients' Name : Mala singh. **O.P.D No. :** 27898

Age : 42 **Date :** 4/10/19

Sex: female **Occupation:** Home maker

Address : Lonegaon Pune. **Income :** 20,000 1 month.

Chief Complaint : Pt. complains of pain in upper left back Region since 4-5 months.

History of present Illness : Patient feels pain while chewing ~~food~~ since 4-5 months aggravates on any kind of food chewing

Past Dental History : NRH

Past Medical History : NRH

Family History : NRH

Personal History : WRH

Oral Hygiene Habits : Tooth Brush + Tooth Paste

Other Habits : –

Extra Oral Examination :

Symmetry of Face :

Lips : Competent

Lymph Nodes : No on palpable

T . M. Joint : No clicking & popping sound

Intra Oral Examination :

Halitosis : present

Oral Mucous Membrane : No Ab. seen

Tongue : No Abnormality seen

Palate : Normal

Gingiva :

	Region	Colour	Contour	Consistency	Surface Texture	Size	Bleeding On Probing	Exudation
MAXILLARY	Anterior	Coral pink	Scalloped	Firm & Resilient	Stippling Absent	Normal	Absent	–
	Posterior	Coral pink	Scalloped	Firm & Resilient	Stippling Absent	Normal	Absent	–
MANDIBULAR	Anterior	Coral pink	Scalloped	Firm & Resilient	Stippling Ab.	Normal	Absent	–
	Posterior	Coral pink	Scalloped	Firm & Resilient	Stippling Ab.	Normal	Absent	–

Mucogingival Problems : Shallow vestibule.

Frenal Attachment :

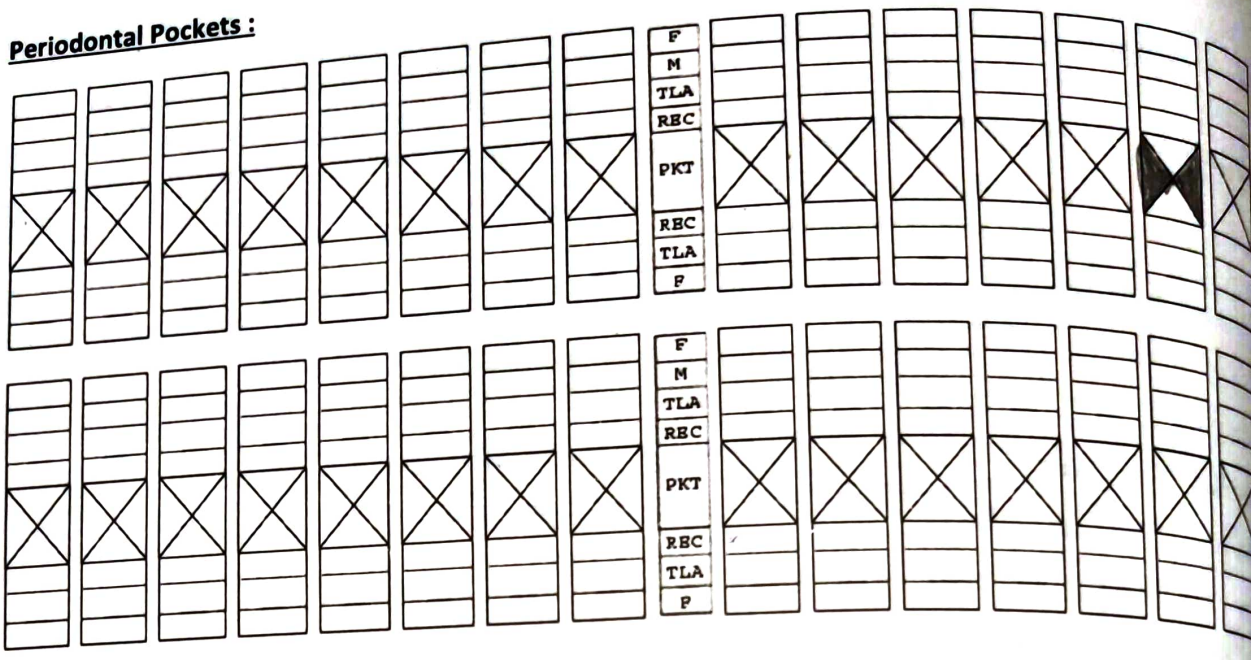

Upper :

Lower :

Width of Attached Gingiva : **Adequate/ Inadequate**

Tension Test:

Periodontal Pockets :

F-Furcation involvement,

M-Mobility,

TLA- Total loss of attachment,

REC-Recession,

PKT-Pocket

Examination of Teeth :

Teeth Present : 21

periodontal instruments are designed are specific purpose such as removing calculus, planing root surface & removing diseased tissue. curettage the gingival

Classification

- On the basis of purpose they serve:-

i) periodontal probes :- These are used to locate, measure & mark pocket as well as determine their course on individual tooth surface

ii) Explorers :- They are used to locate calculus & deposits and caries.

iii) Scaling and root planing & curretage instruments :- they are used for removal of biofilm and rough of the tooth, removal of diseased cementum from the subgingival roots surface & removal of soft tissue lining the pocket.

scaling and curretage instruments are following.

- Sickle scalers :- These are heavy instruments used remove subgingival calculus.
- Curettes :- are used for subgingival scaling, root planing & removal of soft tissue lining the pocket
- Hoes, chisel and files :- removal of deposits.

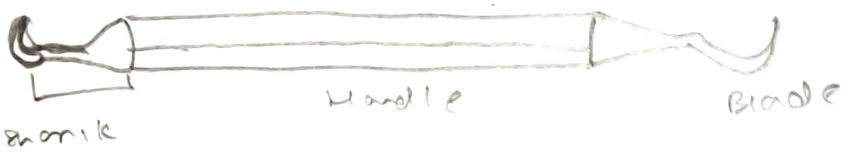

- ultrasonic & sonic instruments used for scaling and cleaning tooth surface in altering the soft tissue wall of POCKET.

iv) Periodontal endoscope :- They are used to visualize deeply into subgingival POCKET & furcation allowing the detection of deposits.

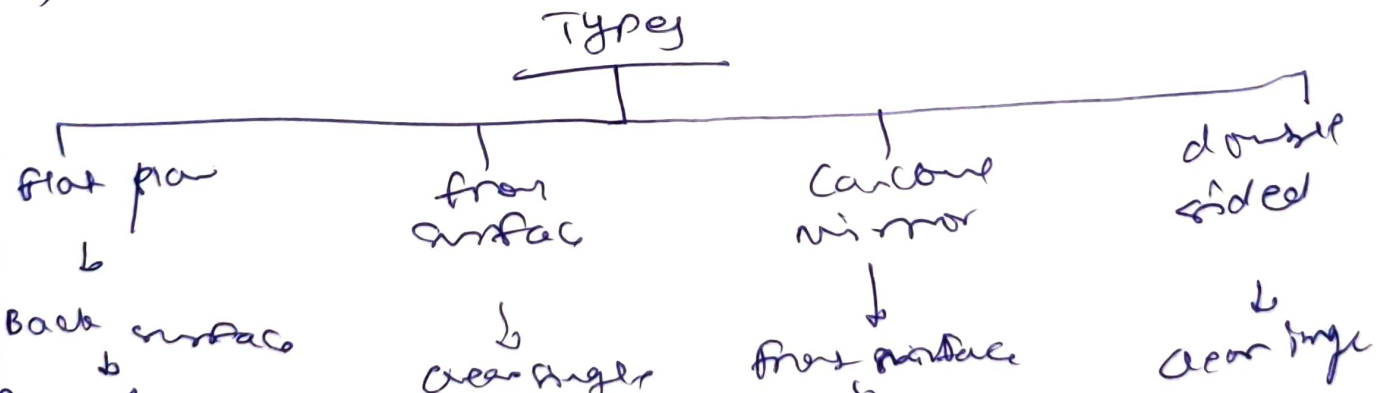

v) Scaling & Polishing instrument :- Such as rubber cups & Brushes, Dental tapes are used to clean & polish tooth surface

- Parts of Instruments :-

1) Handle
2) Shank
3) working end

1) mouth mirror.

2) Periodontal Probe :-

Periodontal probes are used to measure the depth of pocket & determine the configuration

- A typical probe is tapered, rodlike instrument calibrated in millimeters, with blunt rounded tip.
- Shaft should be aligned with long axis of tooth.

i) Williams probe -

Marking : 1, 2, 3, 5, 7, 8, 9, 10.

(4 & 6 are missing which minimize to optical during reading)

ii) WHO probe

Marking - 3.5, 5.5, 8.5 & 11.5

iii) Marquis color coded probe -

Marking : 3-6, 9-12.

iv) Nicholson 'O' Probe.

Marking = 3-6, 9-12.

Easy to read, marking should be differentiated between color codes.

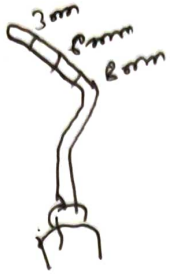

4) Naber's probe :-

Williams probe

WHO Probe

Michigan O-probe

Naber's Probe

5) Explorer :- Dental explorer are diagnostic instruments used to conduct tactile experiments. It has sharp point at the end, explorer tip is 1-2 mm in length.

Uses - It is used to locate subgingival depths and caries to check smoothened and root surface after root planing

Types :- # 23.

Accepted book :- Explorer are diagnostic instruments used to conduct a tactile experimentation - It has sharp point at the end. Explorer tip is 1-2 mm in length

Caries : To check contoured and root surfaces after root planing.

Types - : 17 :- Commonly used explorer tip of explorer is at 90° with lower shaft

Adv - when inserted.

iv) # s ~~(Pigtail~~

(Pigtail of Cowhorn)

The name of it is because of shape of the shank of the instrument that is used to

Do's and Don'ts for Students

1. Students should be punctual to clinics and works sincerely.
2. Each student should wear a clean apron and strictly follow- Formal dress code with Name plate.
3. No Slippers or sports shoes allowed **formal shoesto be worn compulsory.**
4. Equipments in clinics should be **handled** with utmost care. Students shall be fined for any damage/loss.
5. No page from journal should be torn, nor any remark to be rubbed off.
6. Use of **Sterilized instruments,** Face **Mask, Head camp, Hand gloves** and **eye protector** is mandatory while working on a patient.
7. **Mobile Phones** are strictly not allowed in clinics. Any misbehavior in this regard shall lead to the mobiles being confiscated.
8. Students should pay attention to their personal hygiene, such as- nails should be trimmed and without nail polish.
9. Each student should carry the **Journal** daily for clinics.
10. Each student should make **Entries** in the work done and appointment register every day after treatment.
11. Students must take **signature** on case history and work done on the same day of treatment.
12. Students cannot leave the Department without permission.
13. Students shall be given demonstration of various procedures during the course of the postings, hence attendance is considered of utmost importance. Students who remain absent have to justify their absence appropriately.

List of Instruments for III B.D.S. and IV B.D.S. Clinics

1. Mouth Mask
2. Surgical Gloves
3. Head Cap
4. Eye Protector
5. Drape
6. Mouth Mirror
7. Explorer
8. Straight Probe
9. WillamsGranduated Periodontal Probe.
10. Tweezer
11. Cotton Holder
12. Cotton Receiver
13. Disposable Glasses
14. Dappen Dish – 02
15. Kidney Tray – 01
16. SupragingivalScalers (Set of 8)
17. SubgingivalScalers (Set of 7)
18. Universal Curettes 2R/2L,4R/4L
19. Contra- angle MicromotorHandpiece
20. Polishing Cup -02
21. Polishing Brush -02
22. Green Cloth (3) and Instrument Pouch (2)
23. Oral Hygiene Demostration Kit

    (Tooth Brush

    Floss

    Small Face Mirror

    Study Cast- Upper & Lower)

(Note :-All the above instruments are mandatory during posting and should be in working condition.)

CASE HISTORY

Sr. No.: 01 Year : 2021

Patient's Name : Shalaka Dixit O.P.D. No.: 82685

Age : 28 years Date : 14/12/21

Sex : Female Occupation : Architect

Address: Vimannagar, Pune Income: 40,000/-

Chief Complaint : Patient complains of uncleaned teeth since 1 month

History of present illness : Patient was apparently asymptomatic 1 month ago. Then, she noticed uncleaned teeth

Past Dental History : Patient has undergone RCT $\bar{c}$ $\frac{+}{6}$ tooth which was deeply carious, in 2014 at private dental clinic. Then Patient also has undergone restorative treatment (composite restoration) $\bar{c}$ $\frac{+}{6|}$ in 2014 at private clinic.

Past Medical History :

NRH

Family History :

NRH

Personal History: Diet - Vegetarian (+ eggs)

Oral hygiene habits: Horizontal brushing once a day with medium toothbrush & toothpaste. No other dental hygiene aids are being used.

Other habits :

Extra Oral Examination :

Symmetry of face : Grossly symmetrical

Lips: Competent

Lymph Nodes : Normal (non palpable)

T.M.Joint: No deviation, clicking. Adequate movement is seen.

Intra Oral Examination :

Halitosis: Absent

Oral Mucous Membrane : No abnormalities detected

Tongeue: No abnormalities detected

Palate: No abnormalities detected

Gingiva :

	Region	Colour	Contour	Consistency	Surface Texture	Size	Bleeding On Probing	Exudation
MAXILLARY	Anterior	pink with pigmentation	Scalloped	Firm	Stippling +ve	Normal	~~Absent~~ present	Absent
	Posterior	-11-	-11-	-11-	-11-	-11-	present ~~Absent~~	-11-
MANDIBULAR	Anterior	-11-	-11-	-11-	-11-	-11-	-11-	-11-
	Posterior	-11-	McCall's festoon $\frac{C}{5}\frac{+}{5}$	-11-	-11-	-11-	-11-	-11-

CASE HISTORY

Sr. No.: 07 Year :

Patient's Name : Khushi Bhat O.P.D. No.: 96424

Age : 20 years Date : 7/6/2022

Sex : Female Occupation : Student

Address: Lohegaon, Pune Income: –

Chief Complaint : Patient complains of unclean teeth since 2 months.

History of present illness : Patient was apparently asymptomati 2 months ago then she noticed some unclean teeth

Past Dental History : Patient has visited a private dental clinic for pain in right lower back region of jaw because of 3rd molar eruption (2 years ago).

Past Medical History : No relevant history

Family History : No relevant history

Personal History: Mixed diet

Oral hygiene habits: Patient brushes teeth once a day horizontally with toothpaste & toothbrush. No oth aids are being used.

Other habits : —

Extra Oral Examination :

Symmetry of face : Grossly symmetrical

Lips: Competent

Lymph Nodes : Non palpable

T.M.Joint: No clicking, no deviation, adequate mouth opening.

Intra Oral Examination :

Halitosis: Absent

Oral Mucous Membrane : No abnormalities detected

Tongeue: No abnormalities detected.

Palate: No abnormalities detected

Gingiva :

Periodontal Probes

Periodontal probes are used to measure the depth of the pockets and to determine their configuration

The typical probe is tapered, rod like instrument calibrated in millimeters, with round and blunt tip.

Types of Periodontal Probes

A) Marquis color coded probe
Calibrations are in 3mm sections

B) University of North Carolina - 15 probe
a 15 mm long probe with millimeter markings at each millimeter and color coding at the 5, 10 and 15mm

C) University of Michigan "0" probe with-
Williams markings at 1, 2, 3, 5, 7, 8, 9, and 10 mm)

D) Michigan "0" probe with markings at 3, 6 and 8 mm.

Classification of Periodontal Instruments

*enlivo
Date: __/__/____
Page: _____

Introduction:

Periodontal instruments are designed for specific purposes such as removing calculus, planing root surfaces, curetting the gingiva and removing diseased tissue.

Classification of periodontal instruments:

1. Periodontal probes
   (to locate, measure, mark pockets)

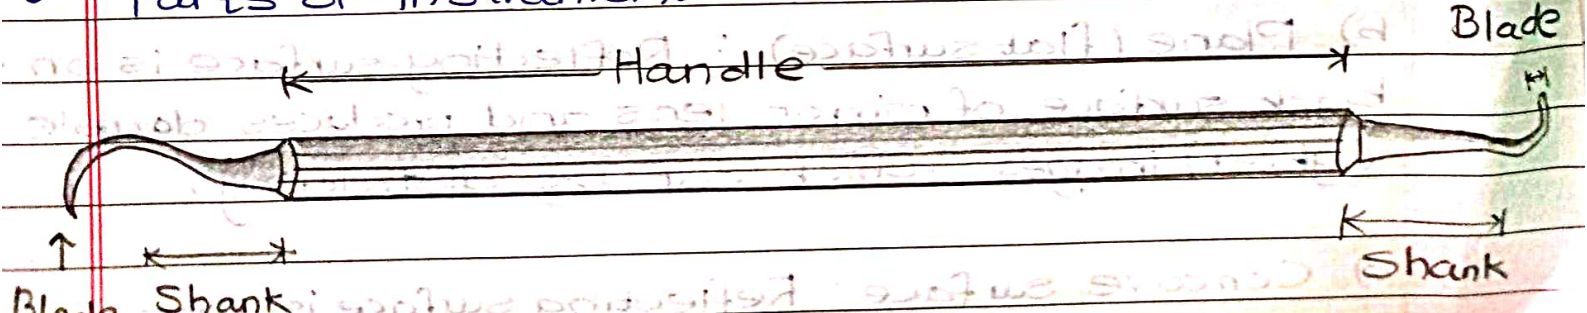

2. Explorers
   (to locate calculus deposites and caries)

3. Scaling, root planing and curettage instruments
   these are classified as -
   a) Sickle scalers
   b) Curettes
   c) Hoe, chisels, file scalers
   d) Ultrasonic and sonic instruments

4. Periodontal endoscopes.

5. Cleansing and polishing instruments.

- Parts of instrument :

Periodontal instrument is composed of :

i) Blade
ii) Shank
iii) Handle

- Mouth mirror :

- It is a diagnostic instrument with a reflecting mirrored surface on the working end.
- Uses :

i) Indirect vision : To view a tooth surface or intraoral structure that cannot be seen directly.
ii) Retraction : Use of mirror head to hold the patient's cheek, lip or tongue for better view structures.
iii) Indirect illumination : To reflect light onto a tooth surface where it is needed.
iv) Transillumination : Technique of directing light off the mirror surface and through the anterior te

- Classification of mouth mirror (According to types of surfaces) :

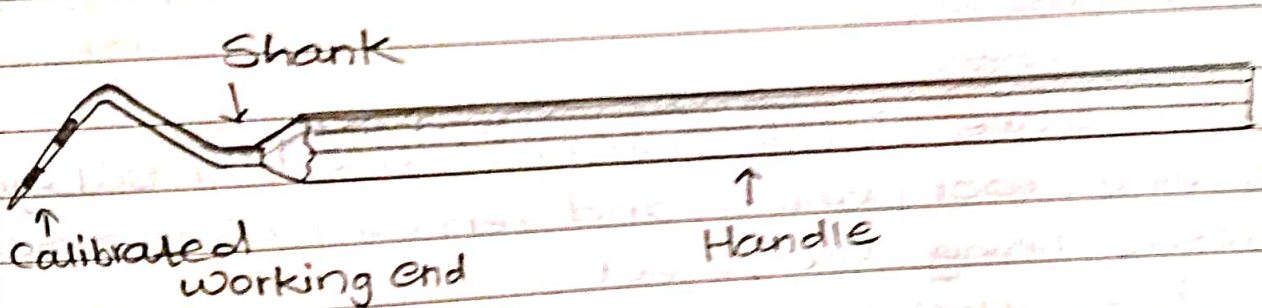

a) Front surface : Reflecting surface is on front s of glass that produces clear image with no distortion and good image quality.
- It can be easily damaged and are expensive

b) Plane (flat surface) : Reflecting surface is on t back surface of mirror lens and produces double (ghost) images which can be distracting.

c) Concave surface : Reflecting surface is concave - front surface mirror that shows magnified image. -may lead to distortion.

I. Periodontal Probes :

Periodontal probes are used to locate, measure and mark pockets, as well as determine their course on individual tooth surfaces.
A typical probe is a tapered, rod like instrument callibrated in millimeters with a blunt rounded tip.
When measuring a pocket, the probe is inserted with a fine, gentle pressure to the bottom of the pocket.
The shank should be aligned with the long axis of the tooth.

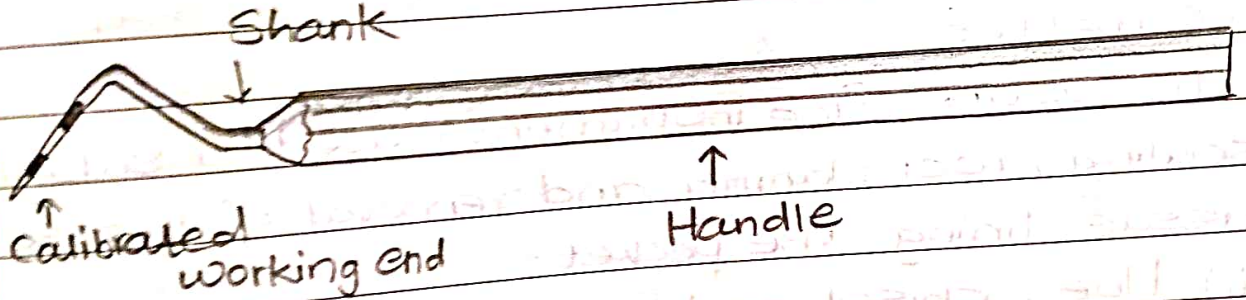

II. Explorers :

- Explorers are used to locate calculus deposits, caries.
- Also used to locate subgingival deposits and check the smoothness of the root surfaces after root planing.
- Explorers are designed with diff.t shapes and angles for a variety of use according to its needs

Page:

III. Scaling, root planing and curettage inst

- Used for removal of biofilm and calcified def from the crown, root of a tooth, removal of altered cementum from the subgingival root surface and debridement of the soft tissue lining the pocket.
- They are classified as below:

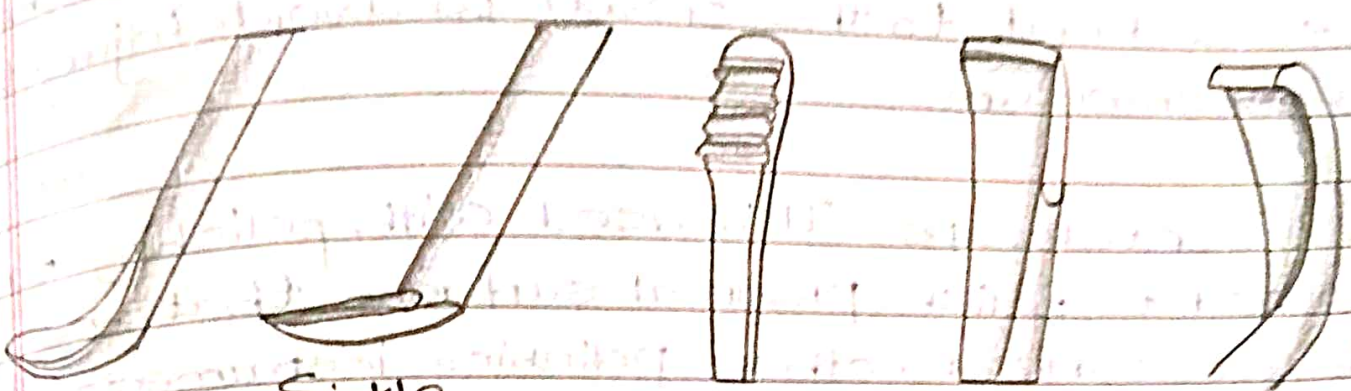

i) Sickle scalers:
- Have a flat surface and two cutting edges converge in a sharply pointed tip.
- It is primarily used to remove supragingival calculus.

ii) Curettes:
- These are fine instruments used for subgingiva scaling, root planing and removal of the soft tissue lining the pocket.

iii) Hoe, chisel and file scalers:
- Used to remove tenacious subgingival calcul and attached cementum.
- Their use is limited compared with that of curettes.
- Hoe scalers are used for scaling of ledges or rings of calculus.
- Chisel scalers are designed for the proximal surfaces of teeth.
- Files are used to fracture/crush calculus.

iv) Ultrasonic and sonic instruments:
- Used for scaling and cleaning of tooth surfaces and curettage the soft tissue wall of the

The five basic scaling instruments

IV. Periodontal endoscopes :

- A dental endoscope has been introduced for use subgingivally in the diagnosis and treatment or periodontal disease
- This device allows clear visualization deeply into subgingival spockets and furcation.
- It permits operators to detect subgingival deposits and guides them in thorough removal of these deposits.

V. Cleansing and polishing instruments :

These instruments category consists of -

a) Rubber cups : They consist of a rubber shell with or without webbed configurations in the hollow interior.

- They are attached to the handpiece and a good cleansing & polishing paste that contains Fluoride is used to keep the rubber cups moist and minimize frictional heat.

b) Bristle brushes : There are available in wheel and cup shapes.

- Since the bristles are stiff, the brush should be confined to the crown to avoid injury to the cementum.

c) Dental tape: It is used with polishing paste used to polish proximal surfaces that are inaccessible to other polishing instruments.

d) Air-power polishing: A specially designed handpiece is used to deliver an air powered slurry of water and sodium bicarbonate for polishing.
- It is effective in removing extrinsic stains.

VI. Surgical instruments:
- Periodontal surgery is accomplished by various instruments.
a) Excisional and incisional instruments eg. Periodontal knives, interdental knives, surgical blades
b) Surgical curettes and sickles
c) Periosteal elevators
d) Surgical chisels.

Curettes

The curette is the instrument of choice for removing deep subgingival calculus, root planing altered cementum and removing the soft tissue lining the periodontal pocket.
Each working end has a cutting edge on both sides and a rounded toe.
The curette is finer than sickle scalers and does not have any sharp points or corners other than cutting edges of the blade.
Therefore, curettes can be adapted and provide good access to deep pockets, with minimal soft tissue trauma.
There are two types of curettes:

1. Universal
2. Area specific

1. Universal curettes

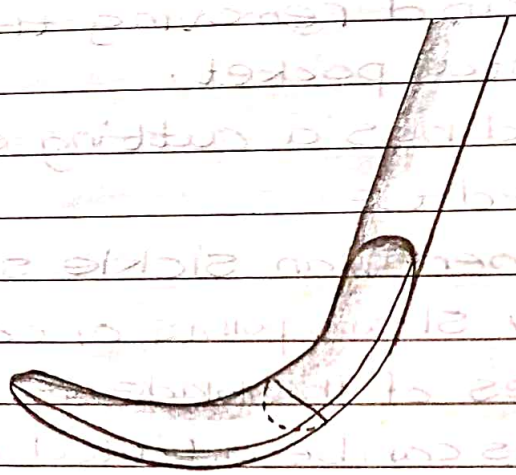

- Universal curettes have cutting edges that may be inserted in most areas of the dentition by altering and adapting the finger rest, fulcrum and hand position of the operator.
- The blade size and the angle and length of the shank may vary, but the face of the blade of every universal curette is at 90° angle (Perpendicular) to the lower shank when seen in cross section from the tip.

Examples - 1. The Barnhart curettes # 1-2 & 5-6
2. Columbia Curettes # 13-14, 2R-2L, 4R-4L
3. Younger Good # 7-8, McCall's # 17-18
4. Indiana University # 17-18

Date: __/__/__
Page:

Basic characteristics of a curette:

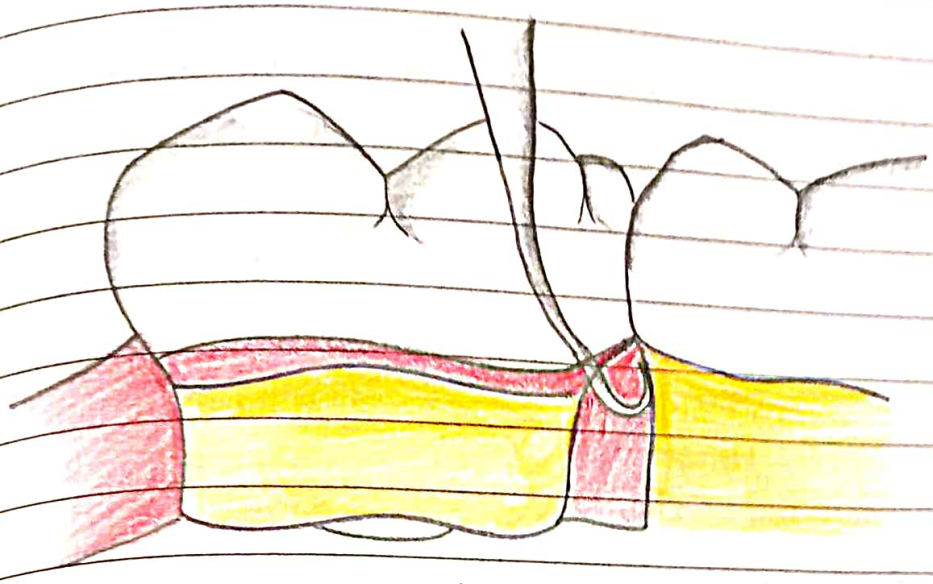

Spoon shaped blade and rounded tip:

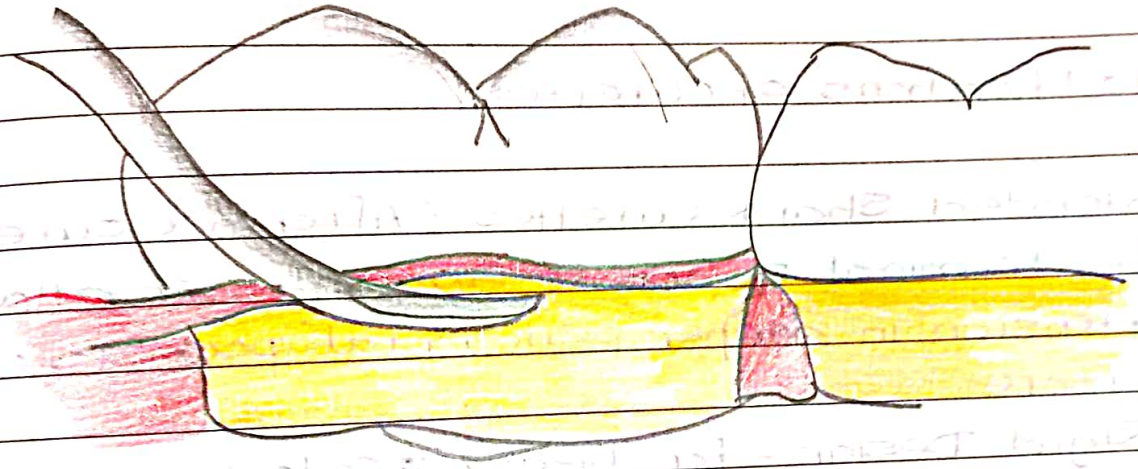

Basic characteristics of a curette

Specifications	Gracey Curette	Universal Cure
Area of use	Set of many curettes designed for specific areas and surfaces.	One curette desig for all areas and surfaces.
Cutting edge Use	One cutting edge used, work with outer edge only.	Both cutting edges used, work with either outer or inne edge.
Curvature	Curved in two planes blade curves up & to the side	Curved in one plan Blade curves up not to the side
Blade angle	Offset blade, face of blade beveled at 60 degree to shank	Blade not offset Face of blade beveled at 90° to shank

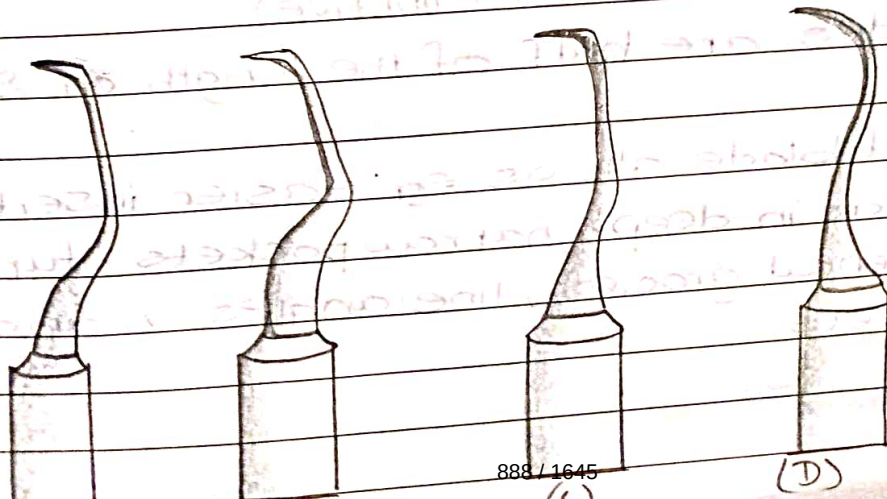

Diagrams

Curette inserted in pocket in a position of the base of a pocket on the distal surface of mandib. molar.

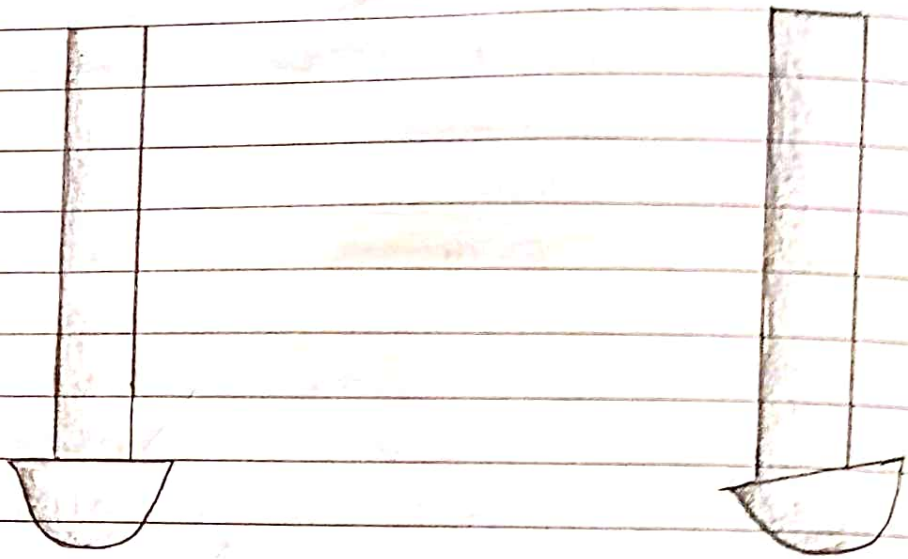

Curette inserted in apocket with the tip directed apically

Micro mini five Gracey Curettes

Universal Curette

Gracey Curette

(A)

(B)

Modifications of curettes:

1) Extended Shank Curettes (After five curettes)
- The terminal shank is 3mm longer allowing extension in deeper periodontal pockets of 5mm or more
- Rigid Design - for heavy calculus removal
- Finishing design - light scaling or deplaquing.

2) Mini bladed curettes (Mini five)
- The blades are half of the length of Standard curettes
- The short blade allows easier insertion and adaptation in deep, narrow pockets, furcations, developmental grooves, line angles, and deep tight pockets.

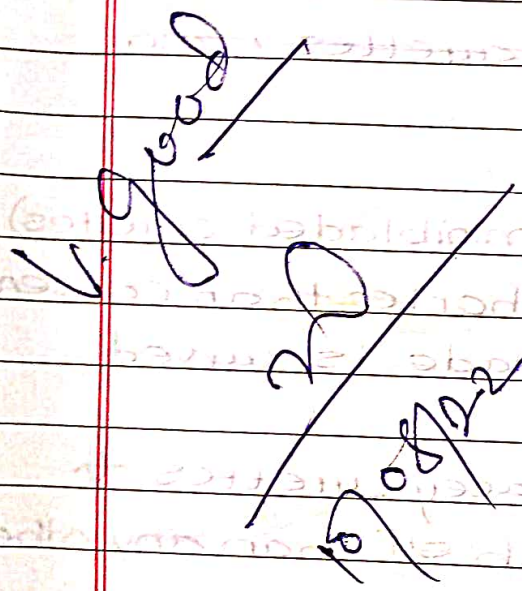

3) Micro mini five Gracey curettes :
- Their blades are 20% thinner and smaller than mini five curettes.
- These are smallest of all curettes and provide exceptional access and adaptation to tight, deep or narrow pockets
- ~~These are smallest of all curettes, and provide e~~

4) Gracey Curettes (Set of 4 minibladed curettes)
- The blade length is 50% shorter than conventional Gracey curettes and blade is curved slightly upward.
- This curvature allows Gracey curettes to adopt more closely to tooth elf than any other curette.

5) Periodontal maintenance Curette (most recent → November 2015)
- The blade is 1mm shorter and 20% thinner, and face of the blade is offset from terminal shank at 60 degrees (Other Gracey designs offset at 70 degrees)
- These are used for patients with tight tissues, recessions and residual pocket depth following initial periodontal therapy or periodontal surgery.

6) Larger and mini Larger Curettes (Set of 3) :
- The universal blade is honed at 90° angle rather than offset blade of Gracey curette.

- This marriage of Gracey and universal cur
designs allows the advantages of area spe
shank to be combined with the versatility of
the universal curette blade.

Tutorials

RINCIPLES OF INSTRUMENTATION

Effective instrumentation is governed by a
f general principles that are common
e basic principles of instrumentation are -

Accessibility
Visibility, Illumination, retraction
Conditioning and sharpness of instruments
maintenance of clean field
Instrument stabilization < Instrument grasp / Finger rest

Instrument - Activation
- Adaptation
- Angulation
- Lateral pressure
- Strokes

1) Accessibility:
ccessibility facilitates thoroughness of instrumentation
e position of the patient and the operator should
provide maximum accessibility to the area
of operation. Neutral seated position for the
clinician — i) Forearm parallel to the floor
ii) Weight evenly balanced iii) Resting elbow should
be at the level of oval acuity
Thighs parallel to the floor
Back straight and head erect.
Avoid positioning your legs under the back of
patient chin. Four Basic positions -
7 0'clock, 9 0'clock, 10-11 0'clock, 12'o clock
Patient position -
For maxillary arch - Chin up
For mandibular arch - chin down

Tutorials

2) Visibility, Illumination and retraction :
- The operator should prefarably operate on the patient with direct illumination.
- The light beam of dental chair lamp shauld be oriented parallel to the viewing direction in order
- ~~The light beam of~~ to abbain shadow from lighting.
- Dental mirror is used for viewing the tooth surface that cannot be seen by direct vision.
- Transillumination : A mirror is used for transillumination It is effective only with anterior teeth because the are thin enough to allow light to pass through them.

Retraction - Mouth mirror is used to retract the lips and cheeks while retracting cheek with mouth mirror the index finger on non operating hand should be used to retract the lips and protect angle of mouth.

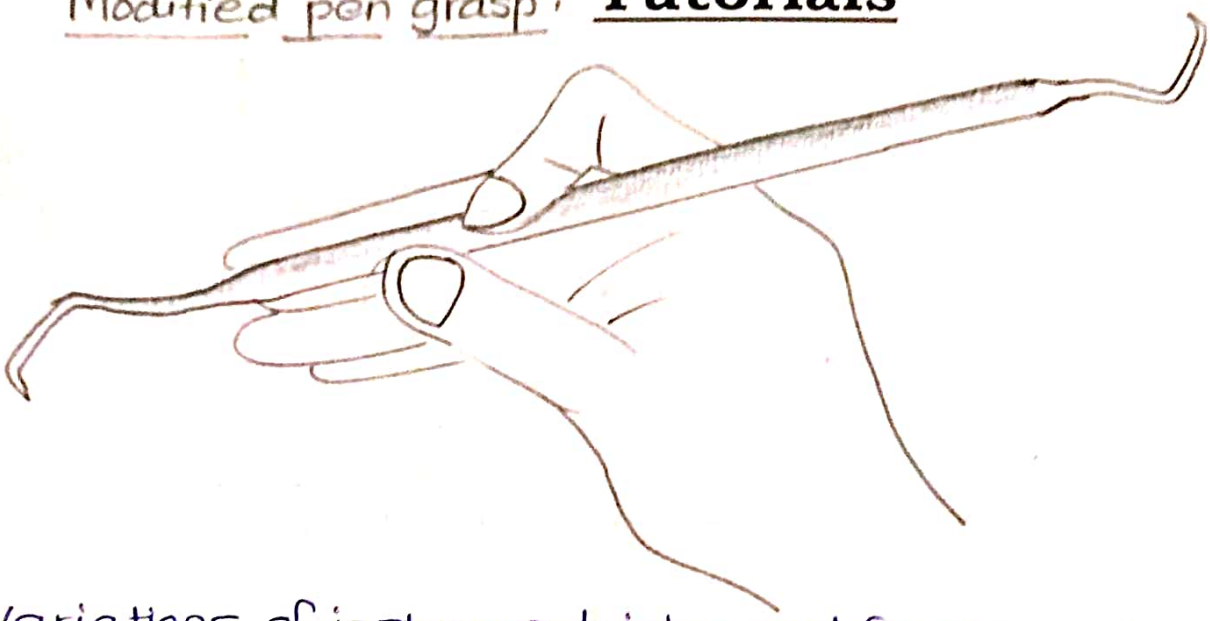

3) Conditioning and sharpness of instruments :
The working ends of the pointed or bladed instrument must be sharp to be effective.
- Methods to check instrument sharpness -
a) Glare test - A sharp cutting edge does not reflect but a dull instrument does.
b) Acrylic test
c) Clinical performance
d) Comparing with new instrument
- Advantages of sharp instrument -
  Easier calculus removal
  Improved stroke control
  Reduced no of strokes
  Increased patient comfort
  Reduced clinician fatigue

4) Maintaining clean, dry field :
Adequate suction is essential and can be achieved with saliva ejector or an aspirator.

Tutorials

Blood and debris can be removed using a suction by wiping and blotting with gauze squares.
Compressed air and gauzes can be used to facilitate visual inspection of tooth surfaces just below gingival margins during instrument?
Instrument stabilization:
Stability of the instrument and hand is primary requisite for controlled and effective instrumentation and avoidance of injury to the patient or clinician.
-Two factors that promote stability are
Instrument grasp:
Modified pen grasp: Most effective and stable Modification of standard pen grasp, ensures contact in performing instrument procedures. The thumb, index finger and middle finger is positioned so that side of pad next to finger nail is resting on instrument. The side of pad next to finger nail is resting on instrument shank. The index finger is bent at second joint from the finger tip and is placed midway between middle finger and the index finger This creates Tripod effect. It enhances control and tactile sensitivity.
Palm and thumb grasp: Used for stabilizing instrument during sharpening and for manipulating air and water syringes.
Finger rests:
. Finger rest serves to stabilize the hand and the instrument by providing a fulcrum as movements are made to activate the instrument.
Classification - 1) Intraoral finger rests
2) Extraoral finger rests

Modified pen grasp: **Tutorials**

Variations of instrument intraoral finger rests -
- Conventional-adjacent teeth
- Cross arch - rest on other side of same arch
- opposite arch
- Finger on finger - The fingers rest is stabilizing the tooth surface by index finger or thumb of non operating hand.

Extra oral fulcrums -
- Palm up
- Palm down

Both intraoral and extraoral fulcrums may be reinforced by applying the index finger or thumb of non operating hand to the handle of instrument for added control and pressure against tooth.

6) Instrument activation:

• Adaptation: It refers to manner in which the working end of a periodontal instrument is placed against surface of tooth.

Objective of adaptation is to make the working end of the instrument conform to the contours of tooth surface. If an instrument is adapted so that only the tip is in contact, the soft tissue can be compressed by working end also causing trauma and discomfort.

Tutorials

Angulation - Refers to an angle bet.n the face of bladed instrument and the tooth surface. It may also be called the tooth blade relationship.
For subgingival insertion, angulation should be close to 0°

Lateral pressure - Lateral pressure may be firm, moderate or light often removing calculus. Lateral pressure is initially applied firmly or moderately and is progressively diminished auntil light lateral pressure is applied for final root planing.

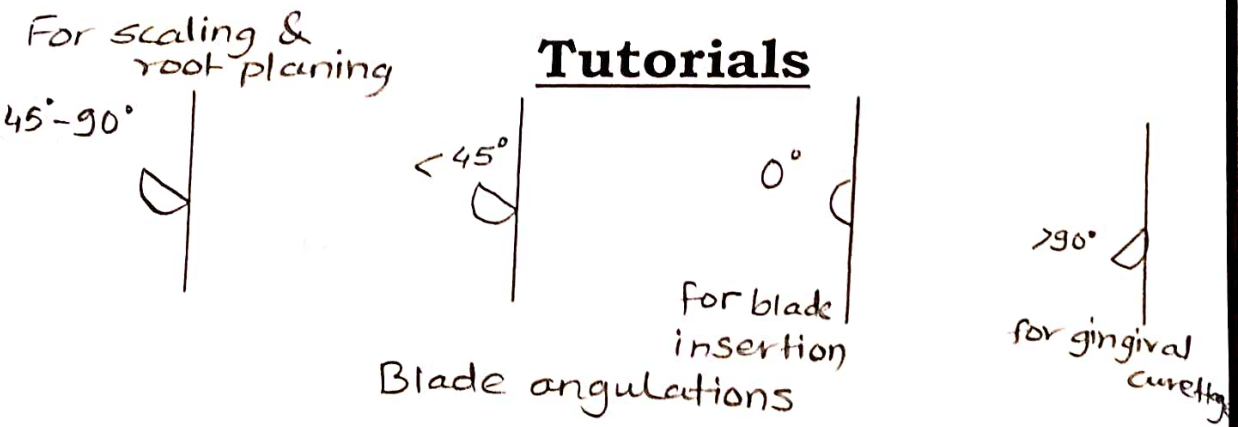

Strokes - 3 basic types of strokes
1) Exploratory stroke
2) Scaling stroke
3) Root planing stroke

Exploratory stroke - It is light stroke that is used with probes and explorers to evaluate and dimensions of pocket and explorers to evaluate the dimensions of pocket and to detect calculus and irregularities of tooth surface.

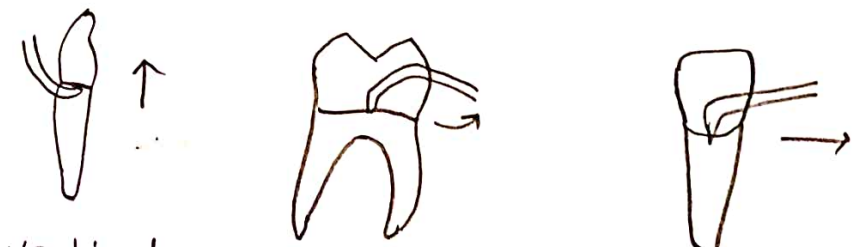

Scaling stroke : It is a short powerful pull stroke that is used with bladed instrument for the removal of both supra and subgingival calculus. The muscles of finger and hands are tensed to establish a secure grasp and lateral pressure is established against tooth surface. The wrist and forearm motion, pivoting In an arc on finger rest produces a more powerful strokes and is therefore preferred for scaling.

Root planing strokes - It is moderate to light pull stroke that is used for final smoothening and planing of root surface.

Mechanical Plaque Control

Plaque control is the regular removal of microbial plaque and preservation of its accumulation on the teeth and adjacent gingival surfaces. It is also called as oral physiotherapy.

Plaque control
- Mechanical
  - Brushes
    - Natural
    - synthetic
    - Manual
    - Powered
  - Interdental aids
- Chemical

Toothbrushes:
The first toothbrush was made by William Addis in England 1780 The handle was carved from bone and brush from seume bristles
-Toothbrush design, ADA specification -119
Width - 3/8 - 5/16 inches
length - 1 - 1 1/4 inches
5-12 rows of tufts
80-86 tufts per bristle
Group of bristles is called tufts.
Diameter of toothbrush -
0.07 inches for soft bristles
0.012 inches for medium bristles
0.014 inches for hard bristles
Bristle hardness is directly proportional to square of diameter and inversely proportional to square of bristle length.
Powered toothbrushes -
1st created in Switzerland 1937

Tutorials

These have oscillating and rotating motion. Low frequency acoustic energy to enhance cleaning ability.

- Most commonly used in - Hospitalized patients children and with physical and mental disabilities, patients with fixed orthodontic appliances.

Dentrifrices -

These aid in cleaning and polishing tooth surfaces Dentifrices ingredients help in reducing calculus plaque, ~~den~~ gingivitis, stains.

Component	Composition		Material	Purpose
	Paste	Powder		
Abrasive	20-55%.	90-95%.	-Calcium Carbonate -Dibasic Ca -Silica	Removes plaque & Stains, polishes tooth surface
Detergents	1-2 %.	1-6 %.	Sodium lauryl sulfate	Aids in debris removal by ↓ surface tension
Colourants	1-2 %.	1-2 %.	Food colours TiO_2, mica	Used for coloured appearance.
Flavouring agents	1-2 %.	1-2 %.	Oil of menthol Sorbitol Peppermint	Provides Flavours
Humectants	20-30%.	0	Sorbitol, Glycerine	Moisture
Water	3%.	0	✗	Acts as Suspension

Tutorials

Binder	3%	0	Xantham gum Synthetic cellulose	Maintains viscosity
Fluorides Therapeutic agents			Sodium fluoride	Prevents caries
Tartar control	0-1%	0	Trisodium pyrophosphate	Inhibits formation of Calculus

Toothbrushing methods-
Horizontal scrub technique
Vertical - Leonard technique
Circular - Fones technique
Horizontal & Vibratory - Stillman's, Charter and Bass technique

Modified Bass technique -
Also called as sulcus cleaning technique
Indications - As a routine oral hygiene methode. Intrasulcular cleaning.

Technique -
The toothbrush is held in such a way that the bristles are at 45° to the gingiva. Bristles are gently vibrated by moving the brush back and forth. The bristle are then moved over the side of tooth towards their occlusal surfaces in a single motion in vertical direction.

Advantages -
Excellent, sulcus cleaning
Good interproximal and gingival cleaning
Good gingival stimulation.

Disadvantage - Dexterity of wrist is required.

Tutorials

Modified Stillman's technique -

Indications: For massaging the gingiva in cases of gingival recession, dental plaque removal from below the height of contour of the enamel & from exposed proximal surfaces.

Technique -

The bristles are pointed apically with an oblique angle to the long axis of the tooth.

The bristles are positioned partly on the adjacent gingiva. The bristles are activated by short back and forth motion are simultaneously moved in coronal direction.

Following 20 strokes the procedure is repeated systematically on adjacent teeth.

Disadvantage: Time consuming.

Improper brushing can damage epithelial attachment.

Charter's method -

Indications - Periodontal surgeries to promote healing and massaging.

Individual having open interdental spaces

Technique - Soft multitufted toothbrush is indicated for this technique. Bristles are pointed occlusally and are activated by mild vibratory strokes.

Advantage - Massage and stimulation for marginal and interdental gingiva.

Disadvantage - Brush ends do not engage the gingival sulcus to remove subgingival bacterial accumulation.

Tutorials

Interdental cleaning aids -
classification -
Based on types of embrasures :
Type I : Embrassure with no interdental gingival recession are adequately cleaned using a dental floss.
Type II : Longer surface with rounded interdental papillae and requires use of interproximal brushes.
Type III - Excessive recessed gingiva i-e. In diastema or exposed root furcation, single / ~~mul~~ unitufted brushes are used. eg Proxa brush.
Dental floss : Any toothbrush, regardless of the brushing method does not completely remove plaque biofilms Hence, interdental aids are necessary.

Types -

a) Monofilament or multifilament
b) Waxed, unwaxed
c) Twisted, non twisted

Interdental brushes - Concave root surface such as mesial aspect of the maxillary first premolar and furcation or if in periodontal patients there is significant attachment loss and recession are not cleaned by the floss.

Mufa
10/8/22

Tutorials

Classification -
1) Conical cylindrical 2) Tapered Rounded 3) Single tufted

Oral irrigation -
Aqua flosses are dental water jet has shown to significantly reduce gingivitis, bleeding on probing and periodontal pathogens.
- Either water or antimicrobial agents are used.
- MOA - It works on basis of hydrokinetic energy. Impact zone on which the solution initially comes in contact with the tooth surfaces.
Flushing zone - In which the solution reaches the subgingival sulcus and cleans it.
Clinical outcomes - Improved removal of plaque biofilm and reduction in calculus, gingivitis and bleeding on probing.

Chemical Plaque Control

Chemical plaque control is an adjunct to and not a substitute for mechanical plaque control.
An ideal chemical plaque control agent should have properties like -
1) Substantivity - Ability to bind to tissue surface and released over time.
2) Penetrability - ability to penetrate deeply into biofilm
3) Selectivity - Ability to affect a specific bacteria in mixed population.

Tutorials

Factors affecting to deliver clearance of plaque control agents from the oral cavity
1) Stability of active agent
2) Solubility of in oral cavity
3) Bio availability
4) Accessibility to site of action
5) Interaction between agent receptor site

Chemical plaque control agents are grouped as -

a) 1st generation
1) Phenolic compounds
- Phenol
- Thymol
- Triclosan
- Listerine
- Ethyl resorcinol

2) Quaternary ammonium compounds
Ethyl pyridinium fluoride
Benzothonium chloride

3) Antibiotics
Vancomycin
Kanamycin

b) 2nd generation
1) Bis biguanide
- Chlorhexidine
- Alexidine

2) Bispridine
Octenidine
Hydrochloride

3) Chlorhexidine

c) 3rd generation
Delmopinol

d) 4th generation
Probiotics

Tutorials

Halogens
- Iodine

Metallic ions
- Zinc
- Copper
- Tin
- Silver
- Mercury
- Herbal extracts

Antiplaque enzymes
- Mcrinase
  Mutanase
  Dextranase

Oxidizing fluoride

3) Chlorhexidine rinse –
This agent has shown most positive antibacterial results prescribed as twice a day with 10 ml of 0.2 % aqueous solution ~~is~~ of chlorhexidine digluconate.
It has completely inhibited dental plaque, calculus, gingivitis. It has a broad antimicrobial spectrum.

Mechanism of action :
At low concentration it causes leakage of intracellular potassium and reduction in bacterial acid production. Bacteristatic.
At high concentration it causes ~~leakage of intracellular p~~. bacterial cell wall disruption and coagulation of cytoplasmic constituents

Tutorials

It has also inhibited enzymes involved in bacterial adhesion bacterial growth and metabolism..

Side effects :-

It has reversible side effects. The teeth, tongue and silicate & resin restoration.

Imparement of taste.

It has low systemic toxicity

Anti Plaque action of chlorhexidine :

Preventing pellicle formation by blocking acid group on salivary glycoproteins

Preventing adsorption of bacterial cell wall to the tooth surface

Preventing binding of plaque by precipitation agglutination factors.

Do's and Don'ts for Students

1. Students should be punctual to clinics and works sincerely.
2. Each student should wear a clean apron and strictly follow- Formal dress code with Name plate.
3. No Slippers or sports shoes allowed **formal shoesto be worn compulsory.**
4. Equipments in clinics should be **handled** with utmost care. Students shall be fined for any damage/loss.
5. No page from journal should be torn, nor any remark to be rubbed off.
6. Use of **Sterilized instruments,** Face **Mask, Head camp, Hand gloves** and **eye protector** is mandatory while working on a patient.
7. **Mobile Phones** are strictly not allowed in clinics. Any misbehavior in this regard shall lead to the mobiles being confiscated.
8. Students should pay attention to their personal hygiene, such as- nails should be trimmed and without nail polish.
9. Each student should carry the **Journal** daily for clinics.
10. Each student should make **Entries** in the work done and appointment register every day after treatment.
11. Students must take **signature** on case history and work done on the same day of treatment.
12. Students cannot leave the Department without permission.
13. Students shall be given demonstration of various procedures during the course of the postings, hence attendance is considered of utmost importance. Students who remain absent have to justify their absence appropriately.

CASE HISTORY

Sr. No.: 1 **Year :** 4th Year.

Patient's Name : Mr. Salim Bale. **O.P.D. No.:** 114655

Age : 30 years. **Date :** 11/1/23

Sex : Male. **Occupation :** Delivery Agent

Address: Phulenagar, Alandi Road, Pune **Income:** 16,000 Rs/month.

Chief Complaint : Patient complains of uncleaned teeth since 2-3 months

History of present illness :

Patient was apparently asymptomatic 2-3 months back when he started experiencing white soft deposits on Tooth surface that gradually increased over 3 months. Patient has a history of tobacco chewing since 5-6 years, 2-3 times a day.

Past Dental History :

Extraction ⊼ 16.

Composite restoration ⊼ 37.

Past Medical History :

No relevant history.

Family History :

Both Parents are diagnosed with hypertension and diabetes.

Personal History: Mixed Diet.

Oral hygiene habits: Uses Toothbrush and Toothpaste [Dantkanti
Brushes once a day in morning.
Technique - Horizontal.

Other habits :

Tobacco chewing since 5-6 years, 2-3 times a day.

Extra Oral Examination :

Symmetry of face : No Gross Assymetry Detected.

Lips: Competent.

Lymph Nodes : Non-Tender
Non-Palpable.

T.M.Joint:

No abnormality detected.

Intra Oral Examination :

Halitosis: Present early in the morning as well as when the mouth is kept closed for longer time

Oral Mucous Membrane :

Tobacco Pouch Keratosis seen extending from 35 to 38 and 46 to 48 on Buccal Mucosa which is non-scrapable Homogenous type

Tongeue:

No abnormality detected.

Palate:

No abnormality detected.

Gingiva :

	Region	Colour	Contour	Consistency	Surface Texture	Size	Bleeding On Probing	Exudation
MAXILLARY	Anterior	Pink.	Scalloped & knife edged.	Firm and resilient.	Stippling present	Normal	Absent	Absent.
	Posterior	Pink.	Scalloped & knife edged.	Firm and resilent.	Stippling present	Normal.	Absent	Absent.
MANDIBULAR	Anterior	Reddish Pink.	Bulbous	Soft and Oedematous	Stippling present	Normal	Present	Absent.
	Posterior	Pink.	Scalloped and knife edged.	Firm and resilient	Stippling present	Normal	Absent	Absent.

Mucogingival Problems :

Frenal Attachment :

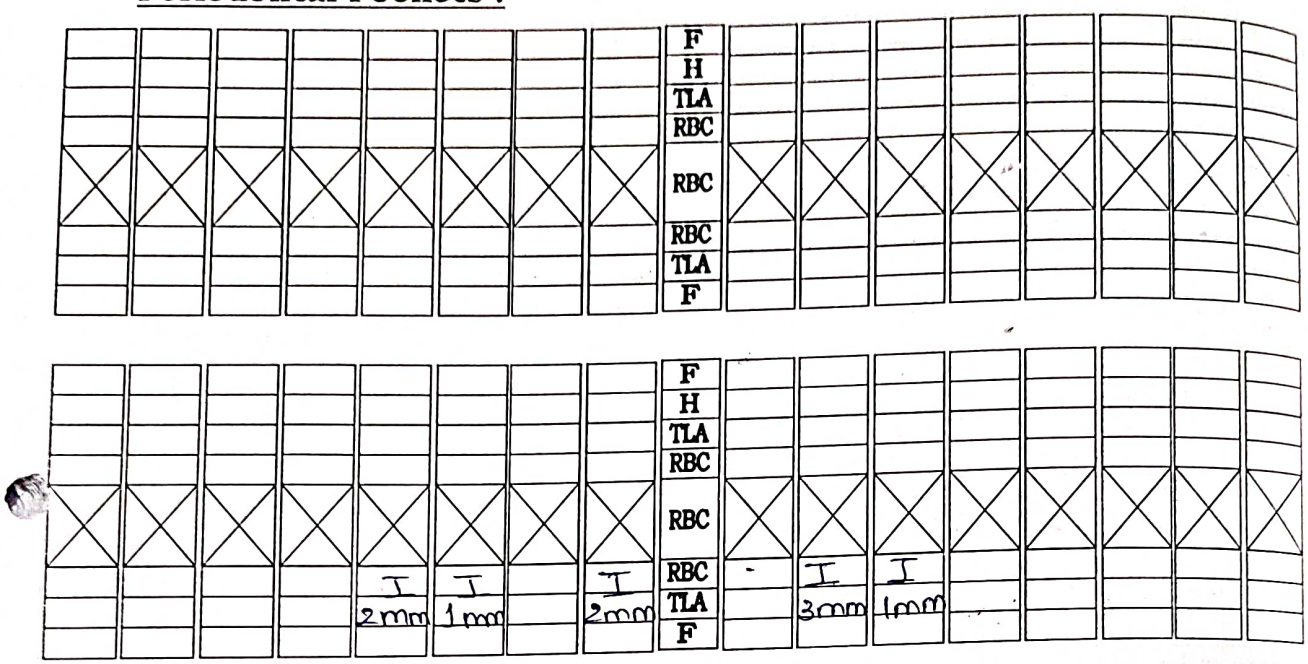

Upper : Gingival

Lower : Gingival

Width of attached Gingiva : ✓ **Adequate/Inadequate**

Tension Test Negative

Periodontal Pockets :

F- Furcation Involvement,

M- Mobility

TLA- Total loss of attachment,

REC- Recession,

PKT-Pocket

Laboratory : BT, CBC, PT-INR, CT, PTT, BSL.

Radiographic :

IOPA $\bar{c}$ +/7

Diagnosis :

Chronic localized periodontitis $\bar{c}$ 4 2 1 | 1 2 3

Prognosis :

Fair

Overall: Fair.

Individual:

Fair

Treatment Plan

Preliminary/ Emergency Treatment ;

Phase I : Non- surgical phase

1] Full Mouth scaling Advised.
2] Mechanical plaque control - Flossing Advised.
3] chemical plaque control- 0.2% Chlorhexidine Mouthwash.
4] Improve Brushing Technique - Modified Bass Technique
5] Excavation of caries and restoration $\bar{c}$ 38.

Phase II : Surgical phase

1] Root coverage procedure $\bar{c}$ $\frac{|}{4\,2\,1\,|\,1\,2\,3}$
2] Implant surgery $\bar{c}$ 16.
3] Root Canal Treatment $\bar{c}$ 36.

Phase III: Restorative phase

1] Prosthesis Crown $\bar{c}$ 36.

Phase IV: Maintenance Phase

class B - 3-4 months.

CASE HISTORY

Sr. No.: 6. **Year :** 2022-23.

Patient's Name : Mr. Vipul Chavan. **O.P.D. No.:** 11188

Age : 18 years. **Date :** 24/1/23.

Sex : Male **Occupation :** Student.

Address: Dios living, Kohegaon, Pune. **Income:** —

Chief Complaint :

Patient complains of unclean teeth since 1 year.

History of present illness :

Patient was apparently asymptomatic 1 year ago. Then the patient started experiencing white hard deposits which gradually increased over a year.

Past Dental History :

No relevant history

Past Medical History :

Asthma since birth. Use asthma pump [salbutamol inhalation]

Family History :

Patient's father has the history of diabetes and blood pressure/ hypertension since 5 years.

Personal History:

Diet - Mixed diet.

Oral hygiene habits: ① Toothpaste and Toothbrush.
② Vertical and horizontal brushing
③ Once in the morning.

Other habits :

No relevant history.

Extra Oral Examination :

Symmetry of face : No gross asymmetry detected.

Lips:

Lymph Nodes : } No abnormality detected.

T.M.Joint:

Intra Oral Examination :

Halitosis: Morning physiological halitosis present and when the patient's mouth is kept close for a longer duration.

Oral Mucous Membrane :

Tongeue: } No abnormality detected.

Palate:

Gingiva :

	Region	Colour	Contour	Consistency	Surface Texture	Size	Bleeding On Probing	Exudation
MAXILLARY	Anterior	Pink with melanin pigment-ation	Scalloped and knife edged	Firm and resilient	Stippling present	Nor-mal	Present	Absent
	Posterior	Pink with melanin pigmen-tation	Scalloped and knife edged	Firm and resilient	Stippling present	Nor-mal	Present	Absent
MANDIBULAR	Anterior	Pink with melanin pigmen-tation	Scalloped and knife edged	Firm and resilient	Stippling present	Nor-mal	Present	Absent
	Posterior	Pink with melanin pigmen-tation.	Scalloped and knife edged.	Firm and resilient	Stippling present	Nor-mal	Present	Absent

Faulty Restoration : Absent.

Pathologic Migration: Absent

Drifting : Absent

Proximal Contacts : Tight

Food Impaction : Absent.

Occlusion : Angle's class I malocclusion [left and right side] Crowding with posterior maxillary region.

Fremitus Test : Positive.

Teeth Deposits : **Plaque :** + **Calculus** ++ **Stains** +

Hypersensitivity: Present.

Etiological Factors :

Local :

Primary : Plaque.

Secondary : Calculus, Faulty Tooth brushing

Systemic :

Asthma.

Investigations :

Laboratory :

Allergies towards medications / dust.

Radiographic :

OPG

Diagnosis :

Chronic generalized marginal gingivitis with chronic localized periodontitis ⅀ ++

Prognosis :

Overall:

Good.

Individual:

Good.

Treatment Plan

Preliminary/ Emergency Treatment ;

Non - surgical

Phase I : 1] Ask patient to carry inhalor whenever he comes for treatment.

2] Scaling and root planing.

3] Mechanical aids - ① Thermo seal tooth paste - To treat hypersensitivity

② Improve tooth brushing - Modified stillman's technique.

③ Flossing advised.

4] Chemical aids - 0.2% chlorhexidine Mouthwash advised.

5] Orthodontic treatment required.

Phase II :

Surgical

① Root coverage procedure - $\frac{\bar{c}}{111}$

② Frenectomy (mandibular arch)

Phase III:

Restorative.

Phase IV:

Class A - 6 months later.

3. Gingival Index (Loe and Silness 1963)

Gingival Score Per Person :

CASE HISTORY

Prelims.

Sr. No.: 12.

Year : 2023.

Patient's Name : Mr. Vijaylaxman Gavahan.

O.P.D. No.:

Age : 42years.

Date : 9/6/23.

Sex : Male.

Occupation : Job.

Address: Manjri, Budruk, Hadapsar.

Income: –

Chief Complaint :

Patient complains of unclean teeth since 1 to 1 1/2 months.

History of present illness :

Patient was apparently asymptomatic 2 months ago. Later patient started experiencing white soft deposits on teeth which gradually increased over time. Patient also complains of recession.

Past Dental History :

Extraction ⊼ $\frac{-}{7}$ 4 years ago. No complications occured.

Past Medical History :

No relevant history.

Family History :

No relevant history.

1003 /.1645

Personal History:

Diet - Mixed diet.

Oral hygiene habits:

Brushing - 2 times a day. [medium hard] toothbrush and toothpaste - [Colgate]

Horizontal brushing technique with

Other habits :

No relevant history.

Extra Oral Examination :

Symmetry of face : No gross asymmetry detected.

Lips: Competent.

Lymph Nodes : Not palpable

T.M.Joint: Clicking, popping heard. No deviation seen.

Intra Oral Examination :

Halitosis: No abnormality detected.

Oral Mucous Membrane :

Tongeue: } No abnormality detected.

Palate:

Gingiva :

	Region	Colour	Contour	Consistency	Surface Texture	Size	Bleeding On Probing	Exudation
MAXILLARY	Anterior	Pink with melanin pigmentation.	Scalloped and knife edged	Firm and resilient	Present	Normal	Absent	Absent
	Posterior	Pink with melanin pigmentation.	Scalloped and knife edged.	Firm and resilient	Present	Normal	Absent	Absent.
MANDIBULAR	Anterior	Pink with melanin pigmentation.	Scalloped and knife edged.	Firm and resilient	Present	Normal	Absent	Absent.
	Posterior	Pink with melanin pigmentation.	Scalloped and knife edged.	Firm and resilient	Present	Normal	Absent	Absent.

Mucogingival Problems :

Absent.

Frenal Attachment :

Upper : Mucosal.

Lower :

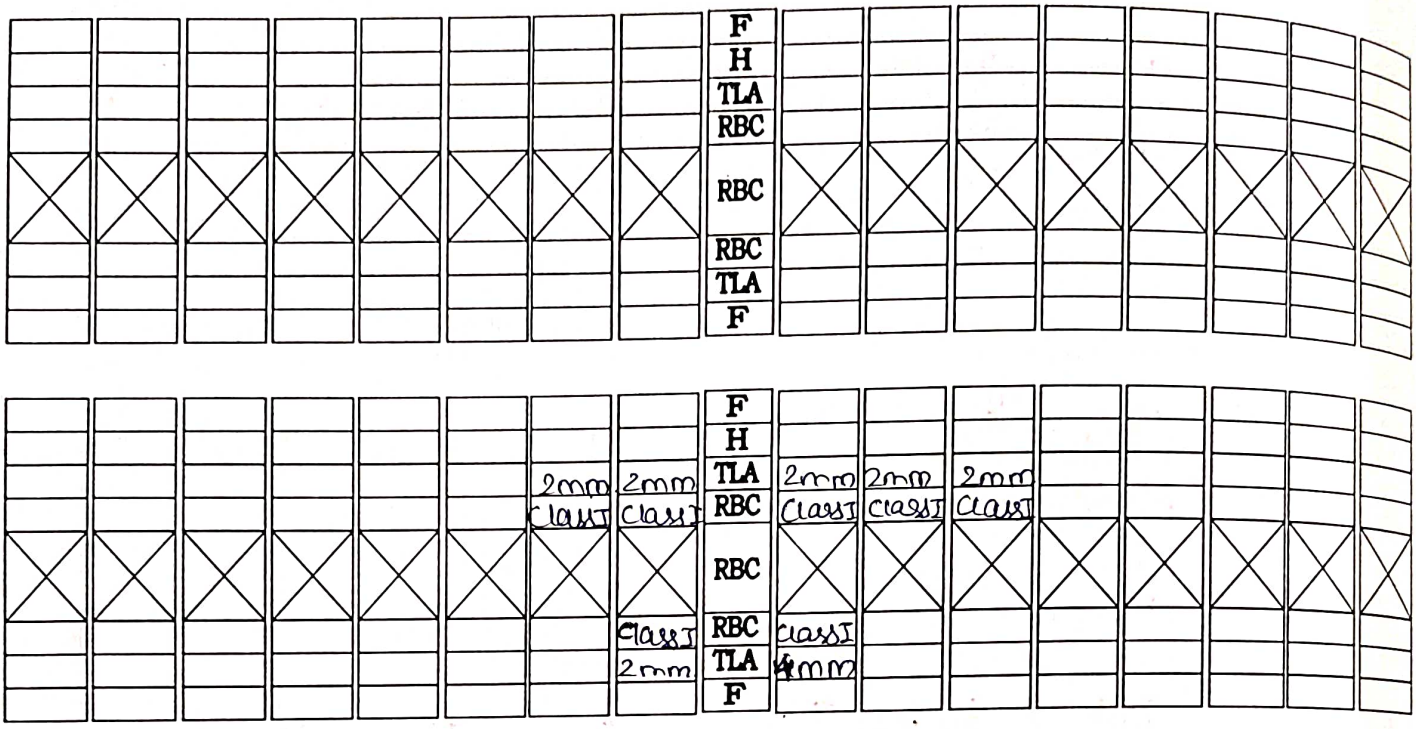

Adequate/Inadequate ✓

Width of attached Gingiva :

Adequate

Tension Test

Periodontal Pockets :

F- Furcation Involvement,

M- Mobility

TLA- Total loss of attachment,

REC- Recession,

PKT-Pocket

Examination of Teeth :

Teeth Present ; 31 c̄ $\frac{87654321 \mid 12345678}{87654321 \mid 12345678}$

Wasting Diseases : **Attrition** / **Abrasion** /**Erosion**

$(\frac{321 \mid 123}{321 \mid 123})$ (—) (—)

Carious Teeth : - ① Pit and fissure caries c̄ $\frac{76}{6}$

② Deep occlusal caries c̄ $\frac{8}{}$

Restored Teeth: ↳ c̄ $\frac{}{6 \mid 6}$

Faulty Restoration : Absent.

Pathologic Migration: Absent

Drifting : Absent.

Proximal Contacts : Present

Food Impaction : Absent

Occlusion : Angle's class I malocclusion with left and right side.

Fremitus Test : Positive

Teeth Deposits : **Plaque :** + **Calculus** + **Stains** Absent.

Hypersensitivity: Absent.

Etiological Factors :

Local :

Primary : Plaque.

Secondary : Calculus, Faulty tooth brushing

Systemic : Absent

Investigations :

Laboratory :

Not applicable

Radiographic :

IOPA ⏜ 8|

Diagnosis :

Chronic generalized marginal gingivitis
⏜ Chronic localized periodontitis ⏜ 21|123

Prognosis :

Overall:

Good

Individual:

Good.

Treatment Plan

Preliminary/ Emergency Treatment ; Not applicable.

Phase I : Non- surgical.

1. Diet counselling
2. Improve brushing technique - Modified Stillman's technique.
3. chemical aids - 0.12% chlorhexidine mouthwash Suggested.
4. Occlusion correction [To treat trauma from occlusion].

Phase II : 5. Immediate - Coronoplasty.
Long term - Orthodontic correction.

Surgical Phase.

1. Root coverage procedure $\overline{c}\,\frac{|}{21|123}$
2. Extraction $\overline{c}\,\frac{8|}{|}$

Phase III:

Restoration Phase.

Restoration $\overline{c}\,\frac{76|}{6|}$

Phase IV:

Class B - 3-4 months

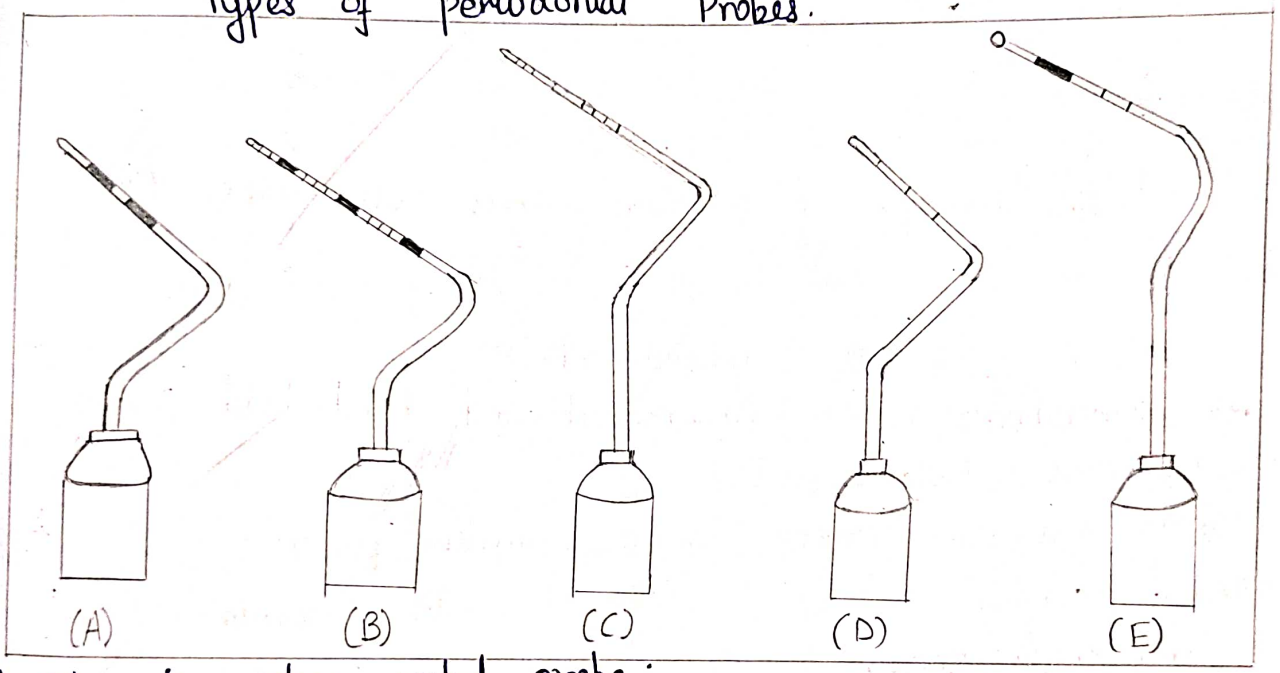

PERIODONTAL PROBES

Tutorials

1] Periodontal probes are used to measure the depth of the pockets and to determine their configuration.

2] The typical probe is tapered, rod like instrument calibrated in millimeters, with round and blunt tip.

Types of periodontal Probes.

A] Marquis color coded probe:
Calibrations are in 3mm sections

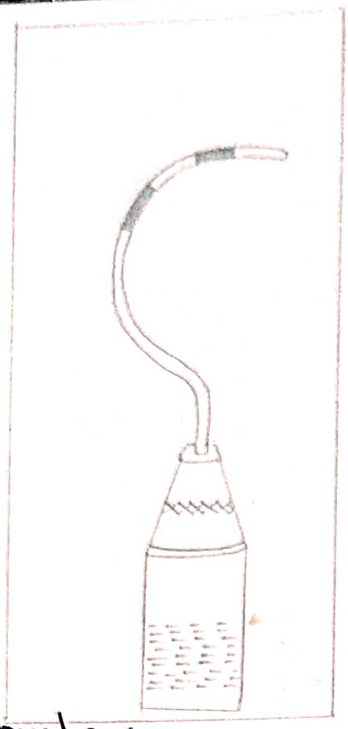

B] University of North Carolina - 15 probe.
a. 15mm long probe with millimeter markings at each millimeter and color codings at the 5, 10 and 15 mm

C] University of Michigan "O" probe with-
Williams markings at 1, 2, 3, 5, 7, 8, 9 and 10mm

D] Michigan "O" probe with markings at 3, 6 and 8mm.

E] WHO probe- It has 0.5 mm ball at the tip and millimeter markings at 3.5, 8.5 and 11.5 mm and color coding from 3.5 to 5.5mm.

Tutorials

Naber's probe :
For detection of furcation areas with color coded markings at 3, 6, 9 and 12 mm.

Classification of probes [Generations]:

1] First generation probes : Conventional and hand held probes [WHO probe ; Naber's probe].
2] Second generation probes : Pressure - sensitive probes.
3] Third generation probes : Computerized probes - [Florida probe, Foster Miller probe]
4] Fourth generation probes : Three dimensional probes.
5] Fifth generation probes : Ultrasonographic probes [Ultra sonographic US probes]

CLASSIFICATION OF PERIODONTAL INSTRUMENTS

Introduction : Periodontal instruments are designed for specific purposes such as removing calculus, planing root surfaces, curetting the gingiva and removing diseased tissue.

CLASSIFICATION OF PERIODONTAL INSTRUMENTS

1] Periodontal probes [to locate, measure, mark pockets)
2] Explorers [to locate calculus deposits and caries]

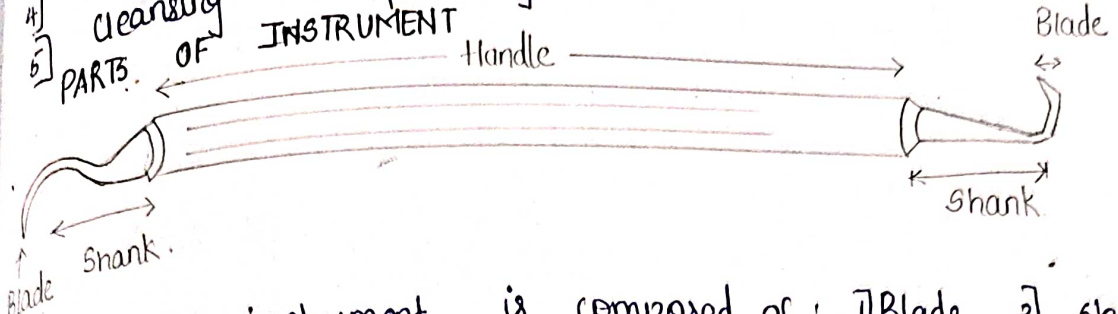

3] Scaling, root planing and curettage instruments these are classified as - a) Sickle scalers b) Curettes c) Hoe chisels, file scalers d) Ultrasonic and sonic instruments.

4] Periodontal endoscopes.

5] cleansing and polishing instruments.

Tutorials

PARTS OF INSTRUMENT

Periodontal instrument is composed of : 1] Blade 2] shank 3] Handle.

- **Mouth Mirror**

It is a diagnostic instrument with a reflection mirrored surface on the working end.

Uses : 1] Indirect vision : To view a tooth surface or intra-oral structure that cannot be seen directly

2] Retraction : Use of mirror head to hold the patient's cheek, lip or tongue for better viewed structures.

3]. Indirect illumination : To reflect light onto the tooth surface where it is needed.

4] Transillumination : Technique of directing light off the mirror surface through the anterior.

→ classification of mouth mirror:

(According to types of surfaces)

a] Front surface: Reflecting surface is an front of glass that produces clear image with no distortion and good image quality. It can be easily damaged and expensive.

b] Plane [flat surface]: Reflecting surface is of back surface of mirror lens and produces double [ghost] images which can be distracting.

c] Concave surface: Reflecting surfaces is of concave front surface mirror that shows magnified image - May lead to distortion.

I] PERIODONTAL PROBES :

- Periodontal probes are used to locate, measure and mark pockets, as well as determine their course on individual tooth surfaces.

• A typical probe is a tapered, rod like instrument callibrated in millimeters with a blunt rounded tip.
• When measuring a pocket, the probe is inserted with a fine, gentle pressure to the bottom of the pocket.
• The shank should be aligned with the long axis of tooth.

Tutorials

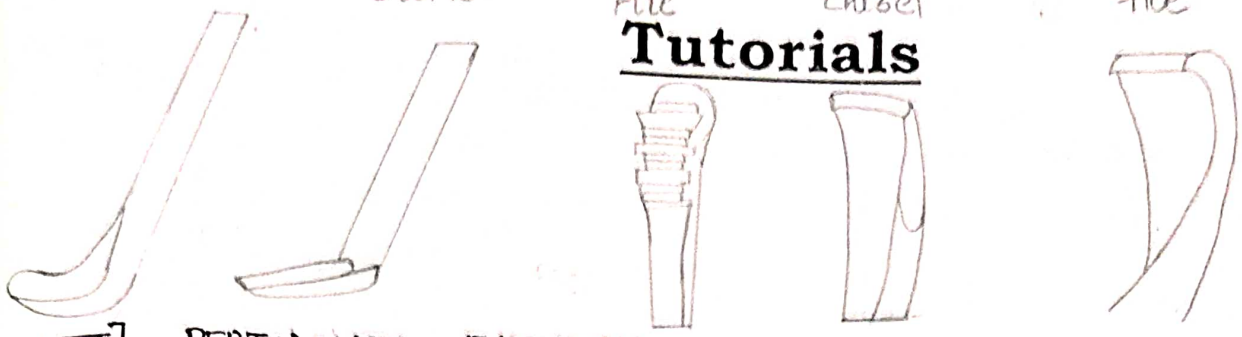

II] EXPLORERS

1] Explorers are used to locate calculus deposits, caries.
2] Also used to locate subgingival deposits and check the smoothness of root surfaces after root planing.
3] Explorers are designed with different shapes and angles for a variety of use according to its needs.

III] SCALING, ROOT PLANING AND CURETTAGE INSTRUMENT.

1] Used for removal of biofilm and calcified debris from the crown, root of tooth, removal of altered cementum from the subgingival root surface and debridement of the soft tissue lining the pocket.
2] They are classified as below:
i) Sickle scalers: -Have a flat surface and two cutting edges and converge in a sharply pointed tip.
• It is primarily used to remove supragingival calculus.
ii) Curettes: - . These are fine instruments used for subgingival scaling, root planing and removal of soft tissue lining the pocket.
iii) Hoe, chisel and file scalers: 1] Used to remove tenacious subgingival calculus and attached cementum. 2] Their use is limited compared with that of curettes. 3] Hoe scalers are used for scaling of ledges or rings of calculus. 4] Chisel scalers are designed for the proximal surfaces of teeth. 5] Files are used to fracture/ crush calculus.
iv) Ultrasonic and sonic instruments: Used for scaling and cleaning of tooth surfaces and curettage the soft tissue

The five basic scaling instruments.

Tutorials

IV]. PERIODONTAL ENDOSCOPES.

- A dental endoscope has been introduced for use subgingivally in the diagnosis and treatment of periodontal disease.
- This device allows clear visualization, deeply into subgingival pockets and furcation.
- It permits operators to detect subgingival deposits and guides them in thorough removal of these deposits.

V]. CLEANSING AND POLISHING INSTRUMENTS:

These instruments category consists of - a) Rubber cusps: They consist of a rubber shell with or without webbed configuration in hollow interior.

b) They are attached to the handpiece and a good cleansing and polishing paste that contains. Fluoride is used to keep the rubber cusps moist and minimize frictional heat.

b] Bristle brushes: - There are available in wheel and cup shapes - Since the bristles are stiff, the brush should be confined to the crown to avoid injury to the cementum.

c] Dental tape: It is used with polishing paste. Used to polish proximal surfaces that are inaccessible to other polishing instruments.

d] Air-power polishing: A specially designed handpiece is used to deliver an air powered slurry of water and sodium bicarbonate for polishing. It is effective in removing extrinsic stains.

VI]. SURGICAL INSTRUMENTS:

1] Periodontal surgery is accomplished by various instruments.

a) Excisional and incisional instruments eg. Periodontal knives, interdental knives, surgical blades.

b] Surgical curettes and sickles.

c] Periosteal elevators

d] Surgical chisels.

CURETTES

Tutorials

- The curette is the instrument of choice for removing deep subgingival calculus, root planing altered cementum and removing the soft tissue lining the periodontal pocket.
- Each working end has a cutting edge on both sides and a rounded toe.
- The curette is finer than sickle scalers and than does not have any sharp points or corners other than cutting edges of the blade.
- Therefore, curettes can be adapted and provide good access to deep pockets, with minimal soft tissue trauma.

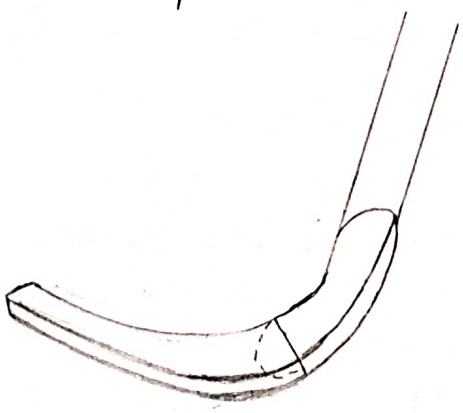

There are 2 types of curettes: —1] Universal 2] Area specific

1] Universal curettes - Universal curettes have cutting edges that may be inserted in most areas of the dentition by altering and adapting the finger rest, fulcrum and hand position of the operator.

The blade size and the angle and length for the shank may vary, but the face of blade of every universal curette is at 90° angle [Perpendicular] to the lower shank when seen in cross section from the tip.

Examples - 1] The Barbart curettes # 1-2 and 5-6.
2] Columbia Curettes # 13-14, 2R-2L, 4R-4L.
3] Younger Good #7-8, McCalls # 17-18.
4] Indiana University # 17-18.

Basic characteristics of a curette: Spoon shaped blade and rounded tip:

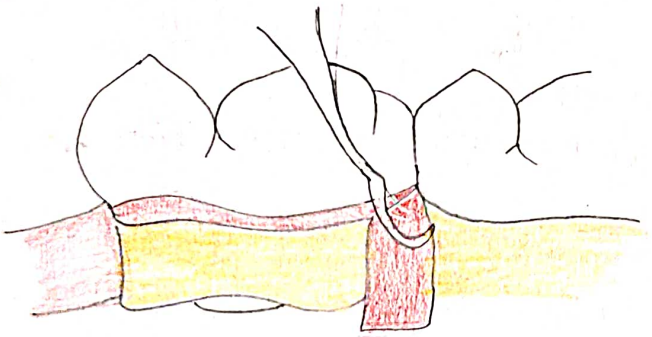

Basic characteristics of curette.

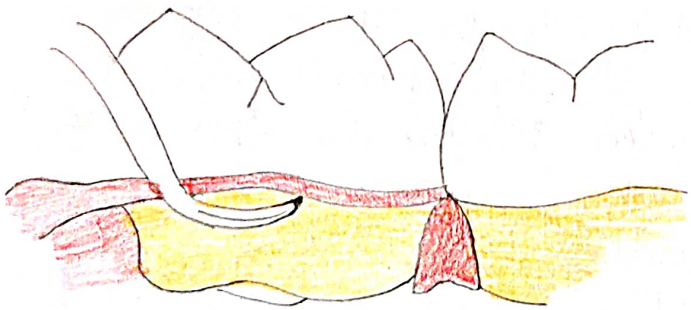

Tutorials

Specifications	Gracey curette	Universal curette.
Area of use	Set of many curettes designed for specific areas and surfaces.	One curette designed for all areas and surfaces.
Cutting edge use.	One cutting edge used, works with outer edge only.	Both cutting edges used, work with either outer or inner edge.
Curvature.	Curved in two planes blades curves up and to the side.	Curved in 1 plane. Blade curves up not to the side.
Blade angle.	Offset blade, face of blade beveled at 60° to shank.	Blade not offset face of blade beveled at 90° to shank.

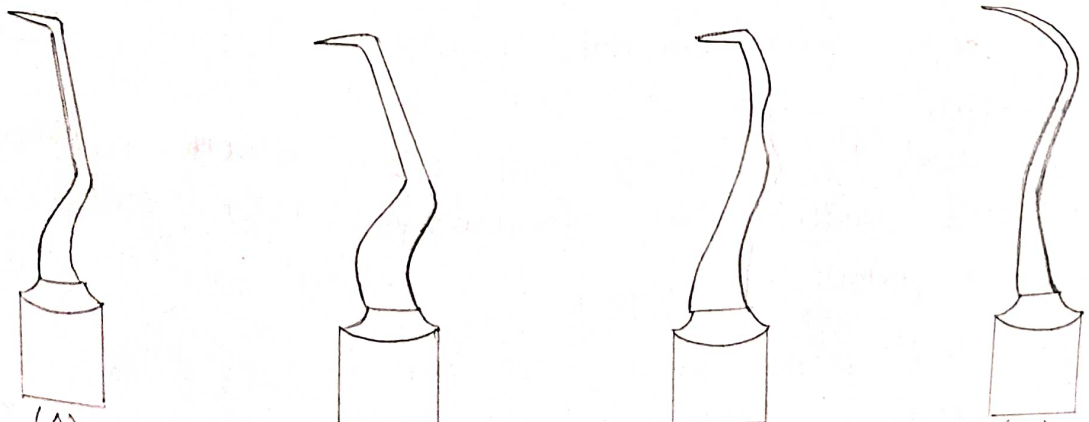

Diagrams:

Curette inserted in pocket in a position of the base of a pocket on the distal surface of mandibular molar.

Curette inserted in a pocket with the tip directed apically.

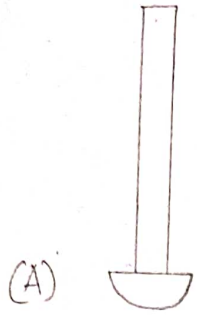

Micro Mini 4 Gracey Curettes

(A) # 1-2

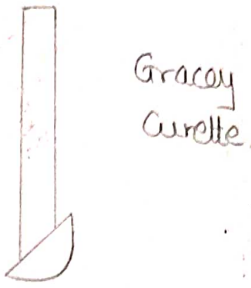

(B) # 7-8

(C) # 11-12

(D) # 13-14

Tutorials

Modifications of curettes:

1]. Extended shank curettes [After five curettes] - The terminal shank is 3mm longer allowing extension in deeper periodontal pockets of 5mm or more.
- Rigid design: For heavy calculus removal.
- Finishing design - light scaling or deplaquing.

2] Mini bladed curettes (mini five)
- The blades are half of the length of standard curettes.
- The short blade allows easier insertion a adaptation in deep, narrow pockets, furcations developmental grooves, line angles and deep tight pockets.

3] Micro mini five Gracey curettes:
- Their blades are 20% thinner and smaller than mini five curettes.
- These are smallest of all curettes and provide exceptional access and adaptation to tight, deep or narrow pockets.

4] Gracey curettes [set of 4 minibladed curettes]
- The blade length is 50% shorter than conventional Gracey curettes and blade is curved slightly upward.
- This curvature allows Gracey curettes to adopt more closely to tooth surface than any other curette.

5] Periodontal maintenance curette [most recent → Nov 2015]
The blade is 1mm shorter and 20% thinner, and face of the blade is offset from terminal shanks at 60° [other Gracey designs offset at 70°)
These are used for patients with tight tissues, recessions and residual pocket depth following initial periodontal therapy or periodontal surgery.

6] Longer and mini longer curettes [Set of 3]:
- The universal blade is honed at 90° angle rather than offset blade of Gracey curette.

- This marriage of Gracey and universal curette designs allows the advantages of area specific shank to be combined with the versatality of the universal curette blade.

Tutorials

PRINCIPLES OF INSTRUMENTATION

Effective instrumentation is governed by a no. of general principles that are common. The basic principles of instrumentation are - ① Accessibility ② Visibility, Illumination, Retraction,
③ Conditioning and sharpness of instruments
④ Maintenance of clean field.
⑤ Instrument stabilization — Instrument grasp.
Finger rest.
⑥ Instrument - Activation, Adaptation, Angulation, Lateral pressure, Strokes.

1] Accessibility :

Accessibility facilitates thoroughness of instrumentation The position of the patient and the operator should provide maximum accessibility to the area of operation.
Neutral seated position for the clinician - i) Forearm parallel to the floor ii) Weight evenly balanced
iii) Resting elbow should be at the level of oval cavity.
Thighs parallel to the floor.
Back straight and head erect.
Avoid positioning your legs under the back of patient chin. Four basic positions -
70° clock, 90° clock, 10-11 o'clock, 12 o'clock.
Patient position - For maxillary arch - chin up
For mandibular arch - chin down.

2] Visibility, Illumination and Retraction

1] The operator should preferably operate on the patient with direct illumination
2] The light beam of dental chair lamp should be oriented parallel to the viewing direction in order to obtain shadow from lighting.

5]. Dental mirror is used for viewing the tooth surface that cannot be seen by direct vision.

4] Transillumination : A mirror is used for transillumination. It is effective only with anterior teeth because they are thin enough to allow light to pass through them.

Retraction :- Mouth mirror is used to retract the lips and cheeks while retracting cheek with mouth mirror the index finger on non-operating hand should be used to retract the lips and protect angle of mouth.

3] Conditioning and sharpness of instruments:
The working ends of the pointed or bladed instrument must be sharp to be effective.

- Methods to check instrument sharpness-

a) Glare test - A sharp cutting edge does not reflect but a dull instrument does.

b) Acrylic test
c) Clinical performance
d) Comparing with new instrument

- Advantages of sharp instrument-
  - Easier calculus removal
  - Improved stroke control
  - Reduced no. of strokes
  - Increased patient comfort
  - Reduced clinician fatigue

4] Maintaining clean, dry field:

Adequate suction is essential and can be achieved with saliva ejector or an aspirator.
Blood and debris can be removed using a suction by wiping and blotting with gauze squares.
Compressed air and gauze can be used to facilitate visual inspection of tooth surfaces just below gingival margins during instrument.

Tutorials

5]. Instrument stabilization:

Stability of the instrument and hand is primary requisite for controlled and effective instrumentation and avoidance of injury to the patient or clinician.

Tutorials

Two factors that promote stability are :-

Instrument grasp:

Modified pen grasp: Most effective and stable.

Modification of standard pen grasp, ensures contact in performing instrument procedures. The thumb, index finger and middle finger is positioned so that side of pad next to finger nail is resting on instrument. The side of pad next to finger nail is resting on instrument shank. The index finger is bent at second joint from the finger tip and is placed midway between middle finger and index finger This creates Tripod effect. It enhances control and tactile sensitivity.

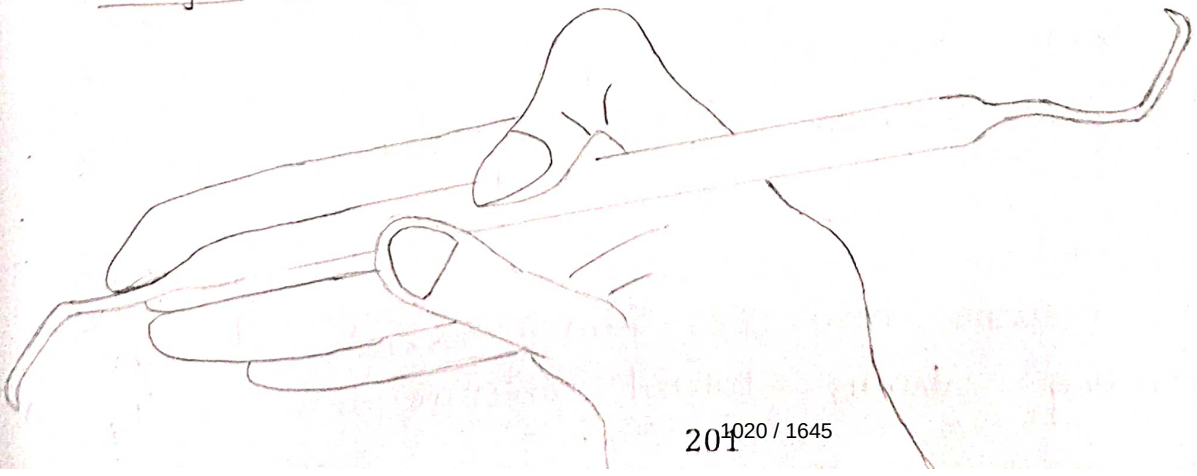

Palm and thumb grasp: Used for stabilizing instrument during sharpening and for manipulating air and water syringes.

Finger rests:

Finger rest serves to stabilize the hand and the instrument by providing a fulcrum as movements are made to activate the instrument.

Classification - 1] Intraoral finger rests.
2] Extraoral finger rests.

Modified pen grasp:

1020 / 1645

Variations of intra-oral finger rests-

- Conventional adjacent teeth.
- Cross arch - rest on other side of same arch.
- Opposite arch.
- Finger on Finger - The fingers rest is stabilizing the tooth surface by index finger or thumb of non-operating hand.

Tutorials

Extra-oral fulcrums-

- Palm up
- Palm down.

Both intra-oral and extra-oral fulcrums may be reinforced by applying the index finger or thumb of non-operating hand to the handle of instrument for added control and pressure against tooth.

6] Instrument activation :

• Adaptation : It refers to manner in which the working end of a periodontal instrument is placed against surface of tooth.

Objective of adaptation is to make the working end of the instrument conform to the contours of tooth surface.

If an instrument is adapted so that only the tip is in contact, the soft tissue can be compressed by working end also causing trauma and discomfort.

Angulation :-

Refers to an angle between the face of bladed instrument and tooth surface. It may also be called the tooth blade relationship.

For subgingival insertion, angulation should be close to 0°.

Lateral pressure :-

Lateral pressure may be firm, moderate or light often removing calculus. Lateral pressure is initially

applied firmly diminished until light Lateral pressure is applied for final root planing.

Strokes - 3 basic types of strokes.

1] Exploratory stroke
2] Scaling stroke
3] Root planing stroke.

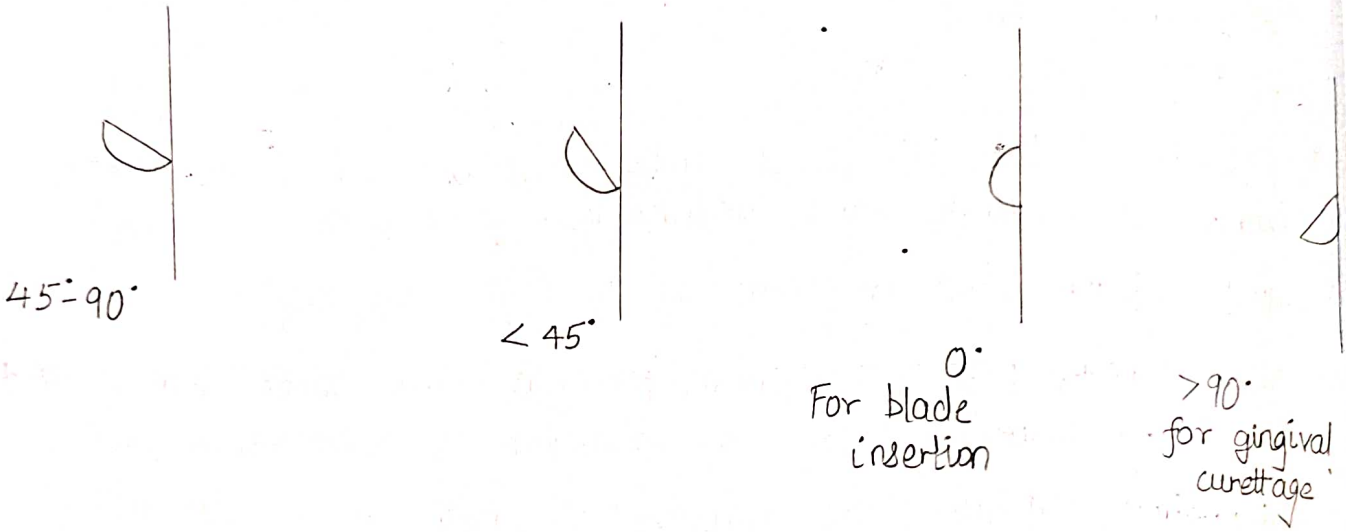

Exploratory stroke - It is a stroke that is used with probes and explorers to evaluate and dimensions of pockets and to detect calculus and irregularities of tooth surface.

Scaling stroke : It is a short powerful pull stroke that is used with bladed instrument for the removal of both supra and subgingival calculus. The muscles of finger and hands are tensed to establish a secure grasp and lateral pressure is established against tooth surface. The wrist and forearm motion, pivoting in an arc on finger rest produces a more powerful strokes and is therefore preferred for scaling.

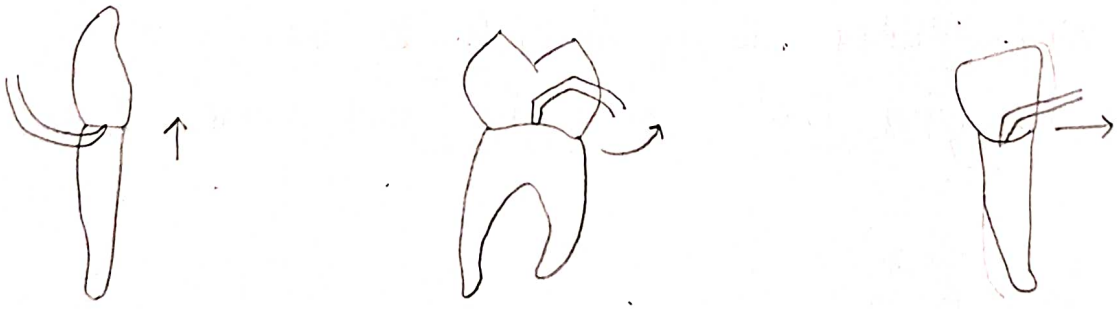

Root planing strokes - It is moderate to light pull stroke that is used for final smoothening and planing of root surface.

Tutorials

For Scaling and root planing

Blade angulations

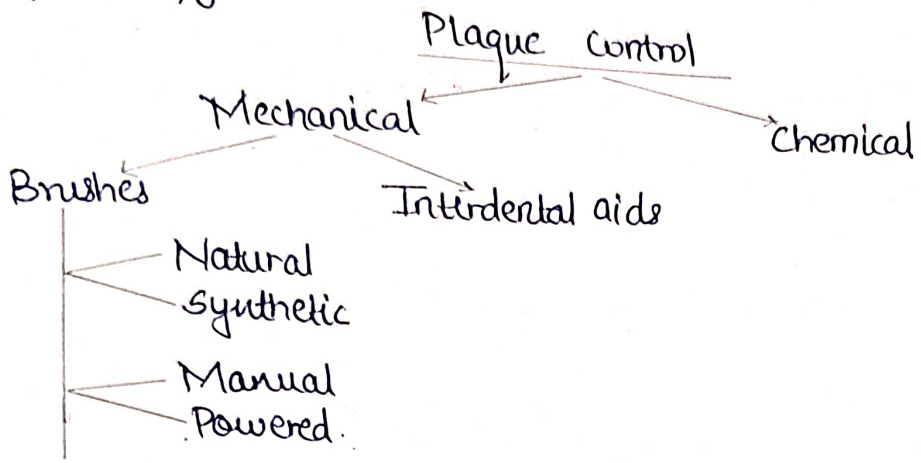

Vertical Oblique Horizontal

Blade Stroke direction

MECHANICAL PLAQUE CONTROL

Tutorials

Plaque control is the regular removal of microbial plaque and preservation of its accumulation on the teeth and adjacent gingival surfaces. It is also called as oral physiotherapy

Toothbrushes :

The first toothbrush was made by William Addis in England 1780. The handle was carved from bone and brush from swine bristles.

- Toothbrushing design , ADA specification - 119.
  Width - 3/8 - 5/16 inches.
  Length - 1 - 1 1/4 inches.
  5-12 rows of tufts.
  80 - 86 tufts per bristle
  Group of bristles is called tufts.
  Diameter of toothbrush -
  0.07 inches for soft bristles.
  0.012 inches for medium bristles.
  0.014 inches for hard bristles.

Bristle hardness is directly proportional to square of diameter and inversely proportional to square of bristle length.

Powered toothbrushes - 205

1st created in Switzerland 1937

These have oscillating and rotating motion.
Low frequency acoustic energy to enhance clearing ability.

Tutorials

Most commonly used in - Hospitalized patients. Children with physical and mental disabilities, patients with fixed orthodontic appliances.

Dentifices -

These aid in clearing and polishing tooth surfaces. Dentifices ingredients help in reducing calculus, plaque, gingivitis, stains.

Component	Composition		Material	Purpose
	Paste	Powder		
Abrasive	20-55%	90-95%	- Calcium carbonate - Dibasic Ca - Silica.	Removes plaque and stains, polishes tooth surface.
Detergents	1-2%	1-6%	Sodium lauryl sulfate	Aids in debris removal by decreasing surface tension.
Colourants	1-2%	1-2%	Food colours TiO_2, Mica.	Used for coloured appearance
Flavouring agents	1-2%	1-2%	Oil of menthol Sorbitol Peppermint.	Provides flavours.
Humectants	20-30%	0	Sorbitol, Glycerine	Moisture.
Water	3%	0		Acts as suspension
Binder	3%	0	Xantham gum Synthetic cellulose 206 - Sodium	Maintains viscosity Prevents caries

Fluorides Therapeutic agents Tartar control	0-1%	0	Trisodium Pyrophosphate	Inhibits formation of calculus.

Toothbrushing Methods:-

Horizontal Scrub Technique
Vertical - Leonard Technique
Circular - Fones technique
Horizontal and Vibratory - Stillman's, Charter and Bass technique.

Modified Bass technique -

Also called as sulcus cleaning technique.

Indications - As a routine oral hygiene method.
Intrasulcular cleaning.

Technique -

The toothbrush is held in such a way that the bristles are at 45° to the gingiva.
Bristles are gently vibrated by moving the brush back and forth. The bristle are then moved over the side of tooth towards their occlusal surfaces in a single motion in vertical direction.

Advantages -

Excellent, sulcus cleaning.
Good interproximal and gingival cleaning.
Good gingival stimulation.

Disadvantage - Dexterity of wrist is required.

Modified Stillman's technique-

Indications: For massaging the gingiva in cases of gingival recession, dental plaque removal from below the height of contour of the enamel and from exposed proximal surfaces.

Technique-
The bristles are pointed apically with an oblique angle to the long axis of tooth.
The bristles are positioned partly on the adjacent gingiva.
The bristles are activated by short back and forth motion are simultaneously moved in coronal direction.
Following 20 strokes the procedure is repeated systematically on adjacent teeth.

Disadvantage: Time consuming.
Improper brushing can damage epithelial attachment.

Charter's method-
Indications - Periodontal surgeries to promote healing and massaging.
Individual having open interdental spaces.
Technique - Soft multitufted toothbrush is indicated for this technique. Bristles are pointed occlusally and are activated by mild vibratory strokes.
Advantage - Massage and stimulation for marginal and interdental gingiva.
Disadvantage - Brush ends do not engage the gingival sulcus to remove subgingival bacterial accumulation.

Interdental cleaning aids -
Classification - Based on types of embrasures:
Type I: Embrasure with no interdental gingival recession are adequately cleaned using a dental floss.
Type II: Longer surface with rounded interdental papillae and requires use of inter proximal brushes.

Type III - Excessive recessed gingiva i.e. In diastema or exposed root furcation, single / unitufted brushes are used.
eg. Proxa brush.

Tutorials

Dental floss: Any toothbrush, regardless of the brushing method does not completely remove plaque Biofilms. Hence, interdental aids are necessary.
Types:- a) Monofilament or multifilament.
b) Waxed, unwaxed.
c) Twisted, non-twisted.

Interdental brushes - Concave root surface such as mesial aspect of the maxillary first premolar and furcation or if in periodontal patients there is significant attachment loss and recession are not cleaned by the floss.

Classification-
1] Conical cylindrical 2] Tapered Rounded 3] Single Tufted.

Oral irrigation-
Aqua flosses are dental water jet has shown to significantly reduce gingivitis, bleeding on probing and periodontal pathogens.
Either water or antimicrobial agents are used.
MOA - It works on basis of hydrokinetic energy.
Impact zone on which the solution initially comes in contact with the tooth surfaces.
Flushing zone - In which the solution reaches the subgingival sulcus and cleans it.
Clinical outcomes - Improved removal of plaque biofilm and reduction in calculus, gingivitis and bleeding on probing.

CHEMICAL PLAQUE CONTROL

Tutorials

Chemical plaque control is an adjunct to and not a substitute for mechanical plaque control.
An ideal chemical plaque control agent should have properties like-

1] Substantivity - Ability to bind to tissue surface and released over time.
2] Penetrability - Ability to penetrate deeply into biofilm.
3] Selectivity - Ability to affect a specific bacteria in mixed population.

Factors affecting to deliver clearance of plaque control agents from the oral cavity

1) Stability of active agent.
2) Solubility in oral cavity.
3) Bio-availability
4) Accessibility to site of action.
5) Interaction between agent receptor site

- Chemical plaque control agents are grouped as-

a) Ist generation

1) Phenolic compounds
   - Phenol
   - Thymol
   - Triclosan
   - Listerine
   - Ethyl resorcinol
2) Quaternary ammonium compounds:
   Ethyl pyridium fluoride
   Benzothonium chloride
3) Antibiotics
   Vancomycin
   Kanamycin

b) IInd generation

1] Bisbiguanide
   - chlorhexidine
   - Alexidine
2] Bisyridine
   Detehidiene hydrochloride
3] Chlorhexidine

c) 3rd generation
   Delmopinol

d) 4th generation
   probiotics.

Halogens
- Iodine

Metallic ions.
- Zinc
- Copper
- Tin
- Silver
- Mercury
- Herbal extracts.

Antiplaque enzymes
- Mucinase
- Mutanase
- Dextranase

Oxidizing Fluoride

3] Chlorhexidine rinse:-

This agent has shown most positive antibacterial results prescribed as twice a day with 10 ml of 0.2% aqueous solution of chlorhexidine digluconate. It has completely inhibited dental plaque, calculus, gingivitis. It has a broad antimicrobial spectrum.

Mechanism of action:

At low concentration it causes leakage of intracellular potassium and reduction in bacterial acid production. Bacteristatic.

At high concentration it causes bacterial cell wall disruption and coagulation of cytoplasmic constituents.

It has also inhibited enzymes involved in bacterial adhesion bacterial growth and metabolism.

Tutorials

Side effects :-

It has reversible side effects. The teeth, tongue and silicate and resin restoration.

Impairment of taste.

It has low systemic toxicity.

Anti-Plaque action of chlorhexidine:

Preventing pellicle formation by blocking acid group on salivary glycoproteins.

Preventing adsorption of bacterial cell wall to the tooth surface.

Preventing binding of plaque by precipitation agglutination factors.

Do's and Don'ts for Students

1. Students should be punctual to clinics and works sincerely.
2. Each student should wear a clean apron and strictly follow- Formal dress code with Name plate.
3. No Slippers or sports shoes allowed **formal shoesto be worn compulsory.**
4. Equipments in clinics should be **handled** with utmost care. Students shall be fined for any damage/loss.
5. No page from journal should be torn, nor any remark to be rubbed off.
6. Use of **Sterilized instruments,** Face **Mask, Head camp, Hand gloves** and **eye protector** is mandatory while working on a patient.
7. **Mobile Phones** are strictly not allowed in clinics. Any misbehavior in this regard shall lead to the mobiles being confiscated.
8. Students should pay attention to their personal hygiene, such as- nails should be trimmed and without nail polish.
9. Each student should carry the **Journal** daily for clinics.
10. Each student should make **Entries** in the work done and appointment register every day after treatment.
11. Students must take **signature** on case history and work done on the same day of treatment.
12. Students cannot leave the Department without permission.
13. Students shall be given demonstration of various procedures during the course of the postings, hence attendance is considered of utmost importance. Students who remain absent have to justify their absence appropriately.

CASE HISTORY

Sr. No.: **Year :**

Patient's Name : chetan jain **O.P.D. No.:** 2023/133357

Age : 39 yr **Date :** 12/8/23

Sex : male ~~pune~~ **Occupation :** job

Address: pune **Income:**

Chief Complaint :

patient complains of uncleaned teeth since 3-4 months

History of present illness :

patient was apparently asymptomatic 6 months back then started noticing yellowish discolouration of teeth & deposition on teeth. deposition increasing with time.

Past Dental History :

NRH

Past Medical History :

~~Presense~~ of renal calculus 1yr back Now relived on ~~its~~ own medication

Family History :

—

12/8/23

Scanned by Scanner Go

Personal History:

Oral hygiene habits:

1) brushes once a day
2) fluoridated tooth paste
3) No use of interdental aids
4) changes toothbrush every 2

Other habits :

NRH

Extra Oral Examination :

Symmetry of face : bilaterally symmetrical

Lips: competant

Lymph Nodes : non-palpable non tender

T.M.Joint: No deviation
No cliking sound

Intra Oral Examination :

Halitosis: present

Oral Mucous Membrane : Normal

Tongeue: Normal

Palate: Normal

Scanned by Scanner Go

Gingiva :

Tutorials

Principles of Instrumentations

- effective instrumentation is governed by a no. of general principles of instrumentation that are common
- The basic principles of instrumentation are -

1) accessibility
2) visibility, illumination, retraction
3) conditioning and sharpness of instruments
4) maintainence of clean field
5) instrument stabilization → instrument grasp
   → finger rest.
6) Instrument → activation
   → adaptation
   → Angulation
   → lateral pressure
   → strokes.

1) Accessibility :-

- accessibility facilitates throughness of instruments
- The position of patient and operator should provide maximum accessibility to the area.

a) Neutral seated position for clinician :-
i) forearm parallel to floor ii) weight evenly balanced iii) Resting elbow should be at level of oval cavity iv) Thighs parallel to floor v) back straight and Head erect v) avoid positioning your legs under back of patient chin vi) four basic positions - 7'o clock, 9'o clock, 10-11'o dock 12'o clock.

b) patient position :-
for maxillary arch - chin up
for mandibular arch - chin down

2) visibility, illumination and retraction :-

- operator should preferably operation on patient with direct illumination.

Scanned by Scanner Go

Tutorials

- The light beam of dental chair lamp should be oriented parallel to viewing direction in order to obtain shadow form lighting.
- dental mirror is used for viewing tooth surface That cannot be seen by direct vision.
- Transillumination :- A mirror used for transillumination effective only with anterior because they are thin enough to allow light to pass through them
- Retraction :- mouth mirror is used to retract lips & cheeks while retracting cheeck with mirror The index finger of non operating hand should be used to protect angle of mouth.

3) Conditioning & sharpness of instrument :-
→ The working ends of pointed or bladed instrument must be sharp to be effective
→ methods to check instrument sharpness
a) glare test : sharp cutting edge does not reflect light but dull edge reflects light.
b) acrylic test :
c) clinincal performance :
d) comparing with new instruments :
→ Advantage of sharp instrument :-
- easier calculus removal
- improved stroke control
- Reduced no. of stroke
- increased patient comfort
- Reduced clinical fatigue.

4) Maintaining clean, dry Field :-
- adequate suction is essential & can be achieved with saliva ejecter or an aspirator.
- blood and debries can be removed using suction by wiping and blotting with guare square.
- compressed air & ~~guage~~ guare can be used to facilitate visual inspection of tooth surfaces just below gingival margins during instrumentation.

Scanned by Scanner Go

Tutorials

5) Instrument stabilization :—

- Stability of instrument & hand is primary requisite for controlled and effective instrumentation and avoidance of injury to patient or clinician.

a) Instrument grasp :—

i) modified pen grasp - most effective and stable modification of standard pen grasp, ensures contact in performing instruments procedure, The thumb, index finger & middle finger is positioned so that side of pad next to finger nail is resting on instruments shank The index finger is bent at second joint from finger tip and is placed midway between middle finger & index finger. which creates tripod effect. it enhances control and tactile sensitivity.

ii) palm & Thumb grasp - used for stabilizing instrument during sharpening and for manipulating air water syringe.

b) Finger rests :—

Finger rest serves to stabilize hand and instrument by providing a fulcrum as movements are made to activate the instrument

classification → intra oral finger rests
→ extra oral finger rests.

Modified pen grasp : —

??

Scanned by Scanner Go

Tutorials

① intra-oral finger rest :—
- i) conventional - adjecent teeth
- ii) cross arch - rest on other side of same arch
- iii) opposite arch
- iv) finger on finger - stabilizing the finger on index finger or thumb of non-operating hand.

② Extra-oral :—
- palm up
- palm down

- Both intraoral and extraoral fulcrums may be reinforced by applying index finger or thumb of non-operating hand to the handle of istrument for added control & pressure against

6) Instrument Activation :—

A) adaptation :—
- it refers to manner in which working end of periodontal instrument is placed against surface of tooth.

objective of adaptation is to make working end of instrument conform to the contours of tooth surface. if an instrument is adapted so that only tip is in contact. the soft tissue can be compressed by working end also causing trauma & discomfort

B) Angulation :—
Refers to an angle between face of bladed instrument and the tooth surface it may also be called tooth blade relationship
- for subgingival insertion, angulation should be close to 0°

C) lateral pressure :— it may be firm, moderate or light often removing calculus lateral pressure is initially applied firmly or moderately and is progressively diminished until light lateral Pressure is applied for final root planing.

D) strokes :—
- i) exploratory
- ii) Scaling
- iii) Root planing.

Scanned by Scanner Go

Tutorials

i) exploratory stroke :- it is light stroke that is used with probes & explorers to evaluate and dimension of packts and to detect calculus & irregularities of tooth surface.

ii) scaling stroke :- Short powerfull pull stroke i.e used with bladed instruments for the removal of both supra and subgingival calculus. The muscles of finger and hand are tensed to establish a secure grasp and lateral presure establish against tooth surface.

iii) Root planing stroke :- moderate to light pull stroke that is used for final smoothning and planing of root surface.

Mechanical Plaque Control

- plaque control is the regular removal of microbial plaque and preservation of its accumul on teeth and adjecent gingival surface. it is also called as oral physiotherapy

plaque control
- mechanical
  - Brushes
    1. Natural
    2. synthetic
    - manual
    - powered
  - Interdental Aids
- chemical

① Toothbrushes :—

The first toothbrush was made by william Addis in england 1780. The handle was carved from bone and brush from sesume bristles

- Toothbrush design :—

ADA specification - 11g

- width - 3/8 or 5/16 inches
- length - 1 - 1 1/4 inches
- 5-12 rows of tufts
- 80-86 ~~tufts per~~ bristle per tuft
- Diameter
  - 0.07 inches - soft
  - 0.012 inches - medium
  - 0.014 inches - hard

Bristle hardness is directly proportional to square of diameter and inversly proportional to square of bristle length.

* Powered toothbrushes :—

- 1st created in switzerland 1937
- These have oscillating and rotating motion low frequency acoustic energy to enhance cleaning ability
- most commonly used in Hosptilaried patients children & physically & mentally disabilities patient with ortho 1961 treatment. appliances.

Scanned by Scanner Go

(2) Dentrifrices :—
- aids in cleaning and polishing tooth surface dentrifrices ingredient helps in reducing calculus plaque, gingivitis, stains.

component	composition		material	purpose
	paste	powder		
Abrasive	20-25%	90-95%	- calcium carbonate dibasic ca silica	Remove plaque, stains, polishes tooth surface
detergent	1-2%	1-6%	- sodium lacryl swphate	Aids in debries removal by ↓ surface tension
colourants	1-2%	1-2%	Food colour TiO_2, Mica	used for coloured apparence.
Flavouring agents	1-2%	1-2%	Oil of menthol sorbitol, papermint	provides, flavours
tants	20-30%	0	sorbitol, glycecin	moisture
ret	3%	0		act as suspension
Binder	3%	0	xantham gum synthetic cellulose	maintain viscocity
Flourides			sodium flouride	Prevents caries
Theruputic agents				
Tartar control	0-1%	0	Trisodium pyrophosphate	inhibit formn of calculus.

Toothbrushing Methods :—
1. Horizontal - Scrub technique
2. vertical - leonard technique
3. circular - fones technique
4. Horizontal & vibratory — stillman's, charter, & bass tech.

• Modified bass technique :—
- also called as sulcus cleaning tech.
Indication - intrasulcular cleaning or routine oral Hygiene method.
Technique - Toothbrush is held in such a way that bristles are at 45° to gingiva Bristles are gently vibrated by moving the brush back & forth

Scanned by Scanner Go

The bristles are then moved over side of tooth towards their occlusal surfaces in single motion in vertical direction.

Advantage → excellent sulcus cleaning
good interproximal and gingival cleaning
good gingival stimulation

disadvantage → dexterity of wrist is required

* Modified stillman's technique :-

Indication → For massaging gingiva in cases of gingival recession, dental plaque removal from below Height of contour of enamel & from exposed proximal surfaces.

Technique :- bristles are pointed apically with an oblique angle to the long axis of tooth bristles are positioned partly on adjecent gingiva activated by short back & forth motion & simultaneously moved in coronal direction. 20 strokes

disadvantage : Time consuming
improper brushing can damage epi. attachment.

* charter's method :

Indication → periodontal surgeries to promote Healing & massaging
Indivisual having open interdental spaces
Technique - soft multitufted toothbrush is indicated for this technique
Advantage - massage & stimulation for marginal & interdental gingiva.

Interdental cleaning Aids :-

classification :
based on type of embrasures

Type I → embrassure with no interdental gingival recession are adequetly cleaned using floss
Type II → longer surface with rounded interdental papillae and requires use of interproximal brushes
Type III → excessive recessed gingiva i.e. in diastema or exposed root furcation. Unitufted brush are used

Dental Floss - any toothbrush regardless of method does not completely remove plaque biofilm
Hence interdental aids necessory
a) monofilament or multifildment
b) waxed or unwaxed
c) Twisted or non-twisted.

Scanned by Scanner Go

Tutorials

Oral irrigation :- aqua flosses are dental water jet has shown to significantly reduce gingivitis, BOP and periodontal pathogens
- either water or antimicrobial agents are used
MOA - works on basis of Hydro kinetic energy
Impact zone on which solution initially comes in contact with tooth surface
Flushing zone in which soln reaches subgingival sulcus & cleans it.
clinical outcome - improved removal of plaque biofilm and reduction in calculus, gingivitis & BOP.

19/1/24

Chemical plaque control

- it is an adjunct to and not a substitute to mechanical plaque control

an ideal chemical plaque control agent should have properties like
① substantivity - ability to bind to tissue surface - relesed over time.
② penetrability - ability to penetrate deeply into biofilm.
③ selectivity - Ability to affect spefic bacteria in mixed popul

factor affecting to delievet clearence of plaque control agents from oral cavity.
1) stability of active agents
2) Bio avalibility
3) accessibility of site of action
4) Interaction between agent receptor site.

Classification :

A) 1st generation
i) phenolic compound
- phenol
- Thymol
- Triclosan
- Listerine
- ethyl resorcinol
ii) quaternary ammonium c.
- ethyl pyridinium fluoride
- Benzothonium chloride
iii) Antibiotic
- vancomycin
- kanomycin

B) 2nd generation
i) Bis-biguinides
- chlorohexidine
- Alexidine
ii) Hydrochlorides
iii) chlorhexidine

C) 3rd generation
- delmopinol

D) 4th generation
- probiotics

Scanned by Scanner Go

Halogens -
- Iodine
Metallic ions -
- zinc
- copper
- Tin
- silver
- mercury
Antiplaque enzyme
- mucinase
- mutanase
- dextranase
oxidising Fluorides

3) chlorhexidine rinse :—
- This agent has shown most positive antibacterial results prescribed as twice a day with 10 ml of 0.2 % aqueous solution of chlorhexidine digluconate It has completely inhibited dental plaque. calculus, gingivitis, it has a broad antimicrobial spectrum.

mechanism of action :—
at low concentration it causes leackage of intracellular potassium and reduction in bacterial Add production. Bacteriostatic at High concentration it causes bacterial cell wall disruption and coagulation of cytoplasmic constituents
It has also inhibited enzymes involved in bacterial adhesion, bacterial growth & metabolism

Side effects :—
-it has reversible side effects, the teeth, tongue & silicate resin restoration.
Impairement of tastes -
it has low systemic toxicity
anti plaque action of chlorhexidine
preventing pellicle formation by blocking Acid group on salivary glycoprotein
Preventing adsorption of bacterial cell wall to tooth surface
Preventing binding of plaque by precipitation agglutination factors.

Periodontal Probes.

- periodontal probes are used to measure depth of pockets and determine their configuration
- typical probe is tapered, rod like instrument caliberated in milimeters, with round, blunt end

* Types of periodontal probe :—

A) Marquis colour coded probe :—
- caliberated at 3 mm sections

B) University of North carolina - 15 (ULC - 15) probe :—
- A 15 mm long probe
- milimeter markings at each mm
- colour coding at 5, 10 & 15.

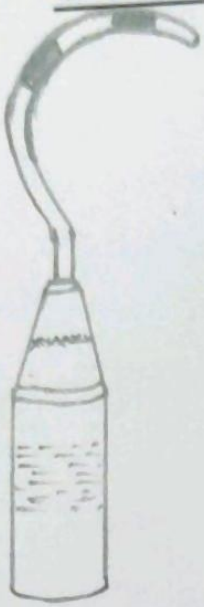

C) university of michigan "o" probe :—
with williams marking at 1, 2, 3, 5, 7, 8, 9 & 10

D) Michigan "o" Probe with markings at 3, 6 & 8 mm.

E) WHO probe :—
- it has 0.5 mm ball at the tip & milimeter markings at 3.5, 8.5 & 11.5 mm & colour coding From 3.5 to 5.5 mm

Scanned by Scanner Go

Tutorials

* Naber's probe :-
  - for detection of furcation areas with colour codeed markings at 3, 6, 9, & 12 mm.

* classification of probes (generation) :-

① First generation probes :-
  - conventional & Hand held probes eg- WHO probe, Nabers probe.

② Second-generation probes :-
  - pressure sensitive probes.

③ Third-generation probes :-
  computerised probes - eg. Florida probe, Foster miller Probe.

④ Foueth generation probes :-
  3-dimensional probes.

⑤ Fifth generation probe :-
  - ultrasonographic probes

Scanned by Scanner Go

classification of periodontal instruments :—

- peridontal instruments are designed for specific purposes such as removing calculus, planing root surface, curetting gingiva & removing diseased tissue.

* classification :—

1) Periodontal probe :—
   - To locate, measure & mark pockets.

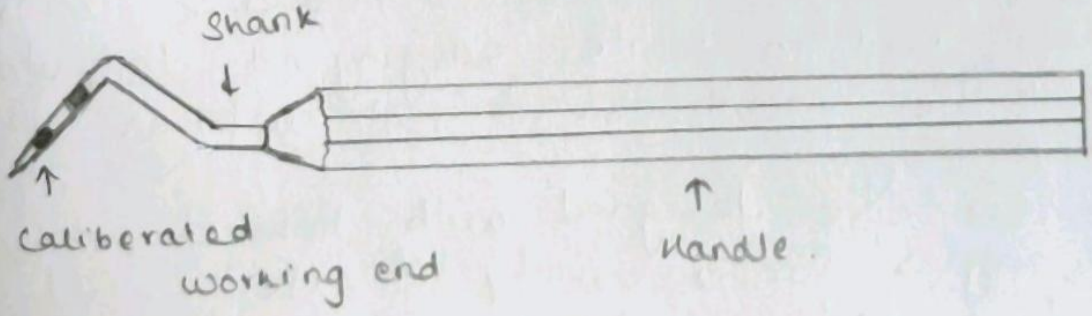

2) Explorers :—
   - To locate calculus deposites & caries)

3) Scaling, Root planing & curettage instruments :—
   a) sickle scalers
   b) Curettes
   c) Hoe, chisels, file scalers
   d) Ultrasonic & sonic instruments

4) Periodontal endoscope :—

5) cleansing & polishing instruments :—

* Parts of instruments :—
   - Periodontal instrument composed of
     ↳ i) Blade
       ii) shank
       iii) Handle.

Periodontal Probe

Scanned by Scanner Go

Tutorials

* Mouth mirror :-
  - it is a diagnostic instrument with a reflective mirrored surface on the working end

* Uses :-
  i) indirect vision :
     - To view a tooth surface or intraoral structure that cannot be seen directly
  ii) Retraction : use of mirror Head to hold Patient's cheek, lip or tongue for better view
  iii) indirect illumination :- To reflet light onto a tooth surface where it is needed.
  iv) Transillumination :- Technique of directing light off the mirror surface through anterior teeth.

* classification of mouth mirror :-
  a) Front surface :- reflecting surface is a front surface of glass. that produces clear image with no distortion & good image quality. it is expensive & can be easily damaged
  b) plane surface :-
     - reflecting surface is a back surface of mirror lens & produces (ghost) double image which can be distracting.
  c) concave surface :- Reflecting surface is concave front surface mirror that shows magnified image may lead to distortion

* explorers :-
  - used to locate calculus, deposites & caries
  - also used to locate subgingival deposites & check the smoothness of root surfaces after root planing.
  - explorers are designed with diff shapes and angles for a variety of use according to its needs.

Scanned by Scanner Go

Tutorials

* Scaling, root planing & curettage instrument:-
- used for removal of biofilm & calcified deposites from crown, root. removal of altered cementum from subgingival root surface & debridment of soft tissue lining pocket.

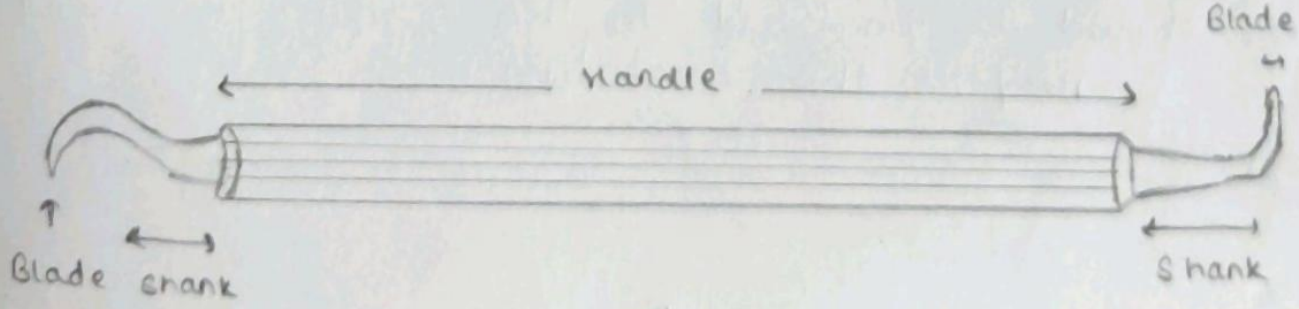

• They are classified as below :—

1) Sickle scaler :—
- Have a flat surface & two cutting edge.
- converge in sharply pointed tip
- 1° used to remove supragingival calculus.

2) Curettes :—
- These are fine instrument used for subgingival scaling, root planing & removal of soft tissue lining of pocket.

3) Hoe, chisel & file scaler :—
- used to remove tenacious subgingival c.
- use is limited as compared to chisel.
- Hoe scalers are used for scaling of ledges or rings of calculus
- chisel for proximal surface of teeth
- Files used to fracture/crush calculus

* Ultrasonic & sonic instruments :—
- used for scaling & cleaning of tooth surface
- & curettage the soft tissue wall of pocket.

Parts of Instrument

Scanned by Scanner Go

Tutorials

IV periodontal endoscope :—

- A dental endoscope has been introduced for use subgingivally in the diagnosis and treatment for periodontal disease.
- This device allows clear visualization deeply into subgingival pockets & furcation it permit operater to detect subgingival deposits & guide them in through removal of this deposits.

V cleansing & Polishing instruments :—

- This category consist of

a) Rubber cup :—

They consist of rubber shell with or without webbed configurations in the & Hollow interior.

- They are attached to the handpiece and a good cleansing & polishing paste that contain fluoride is wed to keep rubber cups & minimize frictional Heat

b) bristle brushes :—

- These are avalible in wheels & cup shape.
- since ~~are~~ the bristles are stiff, the brush should be confined to the crown to avoid injury to the cementum.

c)

1100 / 1645

Scanned by Scanner Go

c) dental tapes :—
- used with polishing paste. used to polish Proximal surfaces that are inaccessible to other polishing instruments

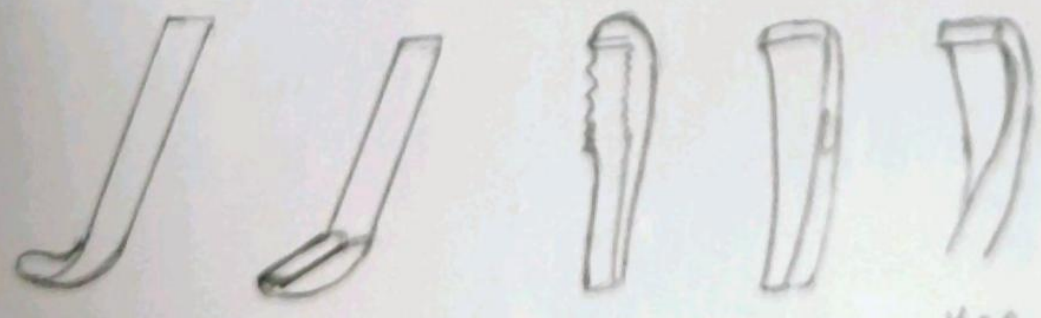

d) Air-power polishing :—
A specially designed handpiece is used to delievet an air powered slurry of water and sodium bicarbonate for polishing
- it is effedive in remaining extrinsic stain.

VI Surgical Instruments :—
periodontal surgery accomplished by various instruments

a) excisional & incisional instruments
eg.
- periodontal knives.
- interdental knives
- surgical blades

b) surgical curettes & sickles
c) periosteal elevators
d) surgical chisels

five basic scaling instruments

Scanned by Scanner Go

Tutorials

Curettes

- The curettes is the instrument of choice for removing deep subgingival calculus, root planing, altered cementum & removing soft tissue lining the periodontal pocket
- each working end has a cutting edge on both sides and a rounded toe.
- The curettes is finer than sickle scaler and does not have any sharp point or corners. other than cutting edge of blade
- Therefore curettes is finer than sickle scaler can be adopted and provide good access to deep pockets. with minimal soft tissue trauma

There are two types of curettes :—

— 1) universal 2) Area specific.

① universal :—

- have cutting edges that may be inserted in most areas of dentition by altering and adapting finger rests, fulcrum & Hand position & operator.
- The blade size & angle & length of shank may vary. but face of blade of every universal curette is at 90° angle (⊥) to lower shank. when seen from cross section from tip.

eg. 1) The Barnart curettes 1-2 & 5-6

2) columbia curettes 13-14, 2R-2L 4R-4L

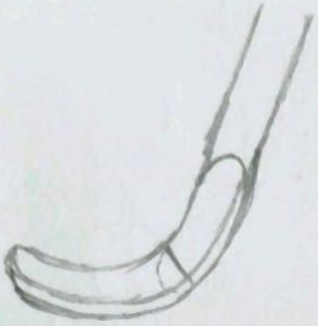

3) younger good 7-8 mccall's 17-18

4) Indiana university 17-18

Scanned by Scanner Go

Tutorials

Curette instead in pocket in a position of the base of a pocket on the distal surface of mandibular molar

Curette inserted in a pocket with the tip directed apically.

micromini five gracey curettes

Scanned by Scanner Go

Tutorials

Modification of curettes :—

1) extended shank curettes (after 5 curettes) :—
- The terminal shank is 3 mm longer allasing extension in deeper periodontal pocket of 5 mm ormore.

Rigid design :— for heavy calculus removal
finishing design : light scaling or deplaquing

2) mini bladed curettes :— (mini five)
- The blades are half of the length of standard curettes.
- short blade allows easier insertion odaptation in deep, narrow pockets furcation developmental grooves, line angle & deep tight pockets.

3) Micro mini five Gracey curettes :—
- Their blades are 20% thinner & smaller than mini five curettes
- These are smallest of all five curettes & provide exceptional access to tight, deep or narrow pockets

4) Gracey curettes :— (set of 4 minibladed curettes)
- The blade length 50% shorter than conventional & Gracey curettes & blade is curved slightly upword.

Scanned by Scanner Go

Tutorials

This curvature allows Gracey curettes To adopt more closely to tooth than any other curettes.

5) periodontal maintenance curette
(most recent → november 2015)

- The blade is 1mm shorter & 20% thinner & face of blade is offset from terminal shank at 60° (other gracey designs offset at 70°)

- These are used for patient with tight tissue, recession & residual pocket depth following initial periodontal therapy or periodontal surgery

6) Langer & mini langer curettes (set of 3)
- The universal blade is honed at 90° angle rather than offset blade of Gracey Curettes

- This marriage of Gracey & universal curettes design allows advantages of area specific shank to be combined with versatility of universal curette blade.

Dr. D Y Patil Knowledge City, Charholi Bk, Via Lohegaon, Pune

D Y PATIL GROUP

ORTHODONTIC CASE RECORD

DEPARTMENT OF ORTHODONTICS AND DENTOFACIAL ORTHOPEDICS

Consent –

I, Anjali Phadke , fully understand that my ward needs Orthodontic treatment. I have also understood the need for extractions of _____before starting the Orthodontic treatment of my ward.

I have understood that although Orthodontic treatment has a very high degree of success, it is a bio-mechanical procedure, so it cannot be guaranteed and the unfavorable consequences of this treatment may include the following:

1. Post-extraction discomfort and swelling may occur for which medication will be prescribed if deemed necessary by the doctor.

2. Pain and discomfort of teeth and adjacent soft tissues may occur due to placement of brackets, bands and wires.

3. The treatment time will be increased indefinitely if the patient does not co-operate with all the instructions given by the treating doctor.

4. There may be a total relapse of finished treatment, if the retainers are not worn for the required duration.

5. There may be a relapse of treatment if deleterious oral habits such as tongue thrusting, mouth breathing, lip sucking etc. persist after completion of treatment.

6. Relapse of treatment may occur later on eruption of the maxillary / Mandibular third molars Extractions if not deemed necessary at the initial examination may be needed later and carried out with due consent.

8. Accidental breakage of the wires or brackets will not be the responsibility of the doctor.

9. Tooth mobility and gum swelling may occur due to Orthodontic treatment, if proper oral hygiene is not maintained during the treatment.

10. Poor Oral Hygiene may also result in permanent stains, white spots or cavities in the teeth.

11. Estimated fees may alter in case the treatment plan is altered during the treatment

12. Pre and post treatment photographs radiographs and other records can be used by the institute for study purpose, presentations and publications.

13. For surgical cases, if surgery is refused by the patient, we/ department shall not be liable for the consequences.

14. If gum condition worsens or in case of severe periodontitis, adequate gum & periodontal health will be determined prior to starting orthodontic treatment. It is the responsibility of the patient to maintain proper oral hygiene including use of special methods.

15. The Department may utilize the services of any of its doctors / students /associated specialist doctors for the treatment.

16. In case of preexisting TMJ disorders if treatment is carried out, it is with full awareness that these may worsen during or after treatment, though orthodontic treatment has no correlation with TMJ disorders. The operator or department shall not be held liable for the same.

17. On completion of the treatment, the aesthetic judgment of the treating doctorls will be considered final and unquestionable.

I have also understood that the estimated duration of treatment will be about 2 Years and the fees for it will be Rs. 15,000/- and Rs. _____ per Month/quarter will be charged.

IOPA (in cases with history of tongue thrust, trauma, anterior open bite, periodontally compromised, mesiodens and any other specification)

M) Orthodontic Model Analysis

Parameter	Upper Arch	Lower Arch
Sum of Incisors	38	22
Total Tooth Material	70	61
Arch Perimeter	80	61
Difference	10 available	0

Nance & Carey's Index: (Mandible)

Arch perimeter- sum of tooth material mesial to 1st molar = 0 mm

LD' (Arch perimeter)=

LD= LA+2(X) $22 + 2(19) = 22 + 38 =$ 60

(LA=Sum of incisors, X= Sum of MD width of canine to 2nd premolar)

0- 2.5mm	2.5- 5mm	More than 5mm	INFERENCE
Proximal stripping	Extraction of second premolar	Extraction of first premolar	Proximal stripping.

Ashley & Howe's Index: (Maxilla)

$$\frac{\text{Canine fossa width} \times 100}{\text{TTM}}$$

$\frac{35 \times 100}{90}$ 38.8%

Need for extraction = 37% or less

No extraction = 44% or more

Borderline case = 37 – 44% Borderline Case.

PMD = $\frac{35 \times 100}{90}$ = 38.8%. E

Pont's Index:

1) Width of arch in premolar region

$$\frac{SOI \times 100}{80} \qquad \frac{28 \times 100}{80} = 35$$

2) Width of arch in molar region

$$\frac{SOI \times 100}{64} \qquad \frac{28 \times 100}{64} = 43.7$$

REGION	MEASURED	CALCULATED	DIFFERENCE	INFERENCE
4 | 4	30	35	5	Expansion Needed.
6 | 6	42	43.7	1.7	

Measured value is less expansion is required.

Chhada's Index

1) Width of arch in premolar region

$$\frac{SOI \times 100}{82.7} \qquad \frac{28 \times 100}{82.7} = 33.8$$

2) Width of arch in molar region

$$\frac{SOI \times 100}{63.7} \qquad \frac{28 \times 100}{63.7} = 43.9$$

REGION	MEASURED	CALCULATED	DIFFERENCE	INFERENCE
4 | 4	31	33.8	2.8	Expansion Needed
6 | 6	41	43.9	2.9	

DRNA Index:

1) Premolar Index (1st pm)

$$\text{Premolar index (1st pm max)} = \frac{\text{Sum of maxillary incisal widths}}{81.3} \times 100$$

$$\text{Premolar index (1st pm max)} = \frac{\text{Sum of mandibular incisal widths}}{57.87(\text{male}) / 60(\text{female})} \times 100$$

2) Molar Index (1st m max)

$$\text{Molar index (1st m max)} = \frac{\text{Sum of maxillary incisal widths}}{63.13} \times 100$$

$$\text{Molar index (1st m max)} = \frac{\text{Sum of mandibular incisal widths}}{45.75} \times 100$$

Bolton's Analysis

$\frac{82 \times 100}{90}$

Overall Ratio –

$\frac{\text{Md 12 x 100}}{\text{Mx 12}}$ Mean = 91.3 %

Inference – Mandibular TTM Excess / Maxillary TTM excess

0.

91.1 %

Anterior Ratio –

$\frac{\text{Md 6 x 100}}{\text{Mx 6}}$ Mean = 77.2 %

Inference – Mandibular Ant. TM excess / Maxillary Ant. TM excess

Inference in mm = 0.2 (excess/deficient overall)

Inference in mm = 0 (excess/deficient anterior)

$\frac{34}{44} \times 100 = 77.2\%$

$90 - \left(\frac{82 \times 100}{91.3}\right) =$

$90 - 89.8$

$= 0.2$

Space analysis:

Maxillary Arch-

Space Required	mm	Space available	mm
Decrowding	8 mm	Existing spaces	10 mm
Correction of Proclination		Derotation/ distalation	3 mm
Correction of deep bite	5 mm	Extraction	
Other		Proximal Stripping	
Total	13 mm	Total	13 m

Mandibular Arch:

Space Required	mm	Space available	mm
Decrowding	6 mm	Existing spaces	0
Correction of Proclination		Derotation	
Levelling of Curve of Spee	3 mm	Extraction	6
Molar Correction		Proximal Stripping	3
Total	9 mm	Total	9 mm

Diagnosis-

1. Skeletal
   a) Sagital-

Jaw Base Relation – Class I / Class II / Class III (ANB)

Maxilla – Orthognathic / Retrognathic / Prognathic (SNA)

Mandible – Orthognathic / Retrognathic / Prognathic (SNB ; SND ; SN-P_oG)

   b) Vertical-

Growth Pattern – Normal / Vertical / Horizontal (FMA ; $G_oG_n - S_n$)

Maxillary Rotation – Normal / Anteinclination / Retroclination (S_eN to Palatal plane)

Rotation of Jaw Bases – Divergent / Convergent / Same Direction (upward / downward)

(Functional + Palatal plane to Mand.Plane)

c) Transverse-

1. Dental

Angle's Malocclusion – Class I / Class II / Class III

3) Soft Tissue

Profile – Stralght / Concave / Convex

Lip –

Chin –

Muscle tonicity –

Tongue –

A 20 year 6 months old female patient on skeletal Class II jaw base with relation to cranial base with Horizontal growth pattern and posterior divergence, with retroclined upper and proclined lower anteriors, upper lip strain associated with competent lips.

Problem List with Priority –

Patient's Priority – correction of crowded teeth.

Operator's Priority – correction of deep bite and to achieve class I molar relation.

Treatment Objectives –

① To correct the retroclination of Maxillary Incisors
② Extraction of Impacted Canine.
③ To correct the lower dental midline shift
④ To corred the deep bite.
⑤ To level and align the arches.
⑥ Settling the occlusion.

Treatment Plans –

Treatment A → ① Non-Extraction treatment plan.

① Fixed Mechanotherapy with MBT slot 0.022".
② Upper anterior Bite plate is given for anchorage
③ Before alignment, Utility arch is given from maxillary central Incisor to maxillary first molar. for correction of retroclination and deep bite.
④ After correction of proclination, alignment and leveling of upper arch is done.
⑤ For mandible, Extraction of Impacted canine.
⑥ Ideal treatment plan for correction of retrusive mandible is orthognathic surgical procedure BSSO (Bilateral split sagittal osteotomy).

23/8/22

CEPHALOMETRIC ANALYSIS

JOINING REPORT

State Common Entrance Test Cell, Maharashtra

8th Floor, New Excelsior Building, A. K. Nayak Marg, Fort, Mumbai- 400 001.

NEET (MDS) - 2021

Provisional Selection Letter (MOP UP 1)

Printed On : Dec 24 2021 11:44AM

● Candidate's Details

Name	:	RAJE MANJIRI PRADEEPKUMAR
Roll Number	:	2055216186
State CET Form No	:	21600168
All India Rank	:	2782
Date of Birth	:	27/08/1997
Category	:	OPEN

● Current Selection

Round No - Date	Institute Name	Course	Allotted Quota
MOP UP 1 - 28/10/2021	2604S : D. Y. PATIL DENTAL SCHOOL, HAVELI, PUNE	CONSERVATIVE DENTISTRY	OPEN

● Previously Round-wise Status

Round No - Date	Institute Name	Course	Allotted Quota
CAP 2 - 22/10/2021	0901S : YOGITA DENTAL COLLEGE & HOSPITAL, KHED, RATNAGIRI	PROSTHODONTICS	OPEN
CAP 1 - 01/10/2021	2408S : DR. HEDGEWAR SMRUTI RUGNA SEVA MANDALS DENTAL COLLEGE, HINGOLI	PEDIATRICS DENTISTRY	OPEN

1. Please read instructions carefully published in Notice for Physical Joining.
2. The selection letter will be considered as e-pass/curfew pass to facilitate candidate along with one parent/Attendant during travel for the purpose of physical reporting/joining to allotted college.
3. The candidates are advised to contact the allotted college authorities for details before proceeding for admission by physical joining process.
4. This selection is Provisional, to be confirmed subject to verification of original documents at the time of physical joining. Candidate should report to the respective allotted college along with all the original certificate and a set of photo copy with requisite fees.
5. Reserved candidate who have secured seat under reserved quota and whose first round of allotted seat got cancelled during the document verification on reporting for admission will be considered for allotment of s the next round of seat allotment with changed category, subject to eligibility & availability of seat in respective category.
6. A desirous candidate may give his/her Status Retention Form in prescribed format available in information brochure within prescribed period to the allotted college to retain the admission. Candidate who submits St Retention Form will get Retention Acknowledgement by the college. Candidate who does not fill status retention form is eligible for betterment in the subsequent rounds, as per the preference filled by the candidate. Betterment in the subsequent rounds is mandatory, if the candiate has not filled and submitted the status retention form. Candidate should note that filling up of Status Retention Form is not mandatory for all candic
7. After joining the allotted college, if candidate desires to resign the allotted seat then the candidate must fill the Cancellation Form in prescribed format available in information brochure and submit to college within prescribed period. Candidate who submits Cancellation Form will get Admission Cancellation Acknowledgement by the college.
8. If the candidate fails to join physically within prescribed period, he/she will be considered as NOT JOINED and will not be considered for further CAP rounds.
9. The candidate is requested to ensure that he/she is issued a System Generated Receipt/Acknowledgement by the college where he/she is taking admission.
10. Candidate must preserve the physical acknowledgement of confirmation of admission / confirmation of retention / confirmation of resignation given by the admitting college authority whichever is applicable.
11. This is computer generated letter, no signature is required.

Note : This is based on the personal data viz.Category, Name, DOB etc. submitted by the candidate.State CET Cell is not responsible for the truth/factualness of the data. Neither State CET Cell is responsible for any inadvertent error that may have crept in the Provisional Selection Letter being published on the web.

Sub: "Comparative Evaluation of the Effect of Aerated and Non-Aerated Beverages on the Surface Roughness of Nano-Ceramic and Microhybrid Resin Composites: An *in-vitro* Study."

Ref: Proposal submitted to IEC-DYPDS on 9/3/22 and presentation before IEC on 14/3/22

Dear Student,

The above-mentioned research proposal of Title & Synopsis of Dissertation was discussed in the Ethics Committee meeting held on 14/3/2022 at our college.

It is declared that –

1. The said Title of Synopsis is not repeated

2. You are registered under Dr. Pradeep Shetty, who is University Recognized P. G. Teacher vide University Letter No. MUHS/E-2/UG/112106/2145/2021 Dated 18/07/2022 for guidance and supervision during the course of studies.

3. Ethics Committee has unanimously approved your Title & Synopsis of Dissertation.

4. The Title is Recommended for study by the student from Date 26/4/2022

Note: 1) It will be mandatory for the student to work on the University approved title for minimum period of 18 months after its approval.

2) It is the responsibility of the student and guide to inform the Ethics Committee about completion of the said research work (Format as per annex 'C')

CASE DISCUSSIONS CHECKLIST

Dr. Shraddha Padwal

DEPARTMENT OF CONSERVATIVE DENTISTRY AND ENDODONTICS

EVALUATION OF CLINICAL CASE PRESENTATION

Topic: Management of Extra Canals in Mandibular Premolars

Name of the P.G. Student: Dr. Shraddha Padwal **Date:** 16/5/23

Name of the Faculty / Observer: Dr. Kiran Keswani

Sl No	Items for observation	Poor 0	Below Average 1	Average 2	Good 3	Very Good 4
1.	Communication of the purpose of the talk					
2.	Evokes audience interest in the subject.				✓	
3.	The introduction.				✓	
4.	The sequence of ideas.				✓	
5.	The use of practical examples and / or illustrations.				✓	
6.	Speaking style (enjoyable, monotonous, etc. specify)				✓	
7.	Attempts audience participation.				✓	
8.	Summary of the main points at the end.				✓	
9.	Asks questions.				✓	
10.	Answers questions asked by the audience.				✓	
11.	Rapport of speaker with his audience.				✓	
12.	Effectiveness of the talk.				✓	
13.	Uses audio-visual aids appropriately.				✓	39

Sl. No.	Items for observation during presentation	Poor 0	Below Average 1	Average 2	Good 3	Very Good 4
1.	Completeness of history.					
2.	Whether all relevant points elicited.					
3.	Clarity of presentation.					
4.	Logical order.					
5.	Mentioned all positive and negative points					✓
6.	Accuracy of general physical examination.					
7.	Diagnosis: Whether it follows logically from history and findings.					
8.	Investigations required.					
	Complete list.					
	Relevant order.					✓
	Interpretation of investigations.					
9.	Ability to react to questioning Whether it follows logically from history and findings.					
10.	Ability to defend diagnosis.					
11.	Others.					44

Sub.:Submission of Title & Synopsis of Dissertation

Respected Sir/Madam,

I Dr.BHAGYASHRI BHOLENATH MUNE

Registered for Master of Dental Surgery in PAEDODONTICS & PREVENTIVE DENTISTRY

The 2021-22 batch under the guidance of Dr. Anand Shigli

Designation : Professor
Department : PAEDODONTICS & PREVENTIVE DENTISTRY
College : D.Y. Patil Dental School, Charoli (Bk), Via Lohegaon, Pune

I am due to appear for Master of Dental Surgery In

I am submitting herewith Title & Synopsis of Dissertation as mentioned below & as suggested by my aforesaid Guide.

Title of Synopsis
Assessment of relationship between BMI, Dental age, chronological age and skeletal maturity among 6 - 12 years children - An in vitro study

Kindly accept and register my Title of Synopsis.

Bmune.

Bhagyashri B. Mune.
(Candidate Name & Signature)

The qualification of the teacher is recognised by the Central Council and the teacher is Recognised as P.G. Teacher by the University vide letter no.....Dated.....

SUB: Research Proposal of entitled **Assessment of relationship between BMI, Dental age, chronological age and skeletal maturity among 6 - 12 years children - An in vitro study**

Ref: DYPDS / IEC / D113 / 2022
(Letter/ Proposal of Student)

Dear Student

The above mentioned research proposal of Title & Synopsis of Dissertation was discussed in the Ethics Committee meeting held on (Date) 14/03/2022 at our College.

It Is Declared That-

1. The said Title of Synopsis is not repeated.
2. You are registered under Dr. Anand Shigli who is University Recognized P.G. Teacher vide University letter no MUHS/E-2/UG/112106/3376/2021 Dated 18/11/2021 for guidance and supervision during the course of studies.
3. Ethics Committee has unanimously approved your Title & Synopsis of Dissertation.
4. The Title is Recommended for study by the student from Date: .....

Note :
1)It will be mandatory for the student to work on the University approved Title for minimum period of 18 months after its approval.
2)It is the responsibility of the student and guide to inform the Ethics Committee about completion of the said research work (format as per annex 'C'))
